FACULTY OF APPLIED SCIENCE AND ENGINEERING.

Historical Sketch.

The Legislative Assembly during the Session of 1877 gave its sanction to the establishment of a School of Practical Science on the basis proposed in the memorandum of the Minister of Education confirmed by the Lieutenant-Governor in Council on the 3rd day of February, 1877.

By the scheme thus approved of, the Government effected an arrangement with the Council of University College whereby the students of the School of Practical Science enjoyed full advantage of the instruction given by its professors and lecturers in all the departments of science which were embraced in the work of the School.

This arrangement was brought to an end in 1889 by the transfer of the department of science above referred to, from University College to the University of Toronto under the operation of the University Federation Act.

In order that the students of the School might continue to enjoy the advantage of the instruction of the above departments, the Senate of the University of Toronto passed a Statute in October, 1889, affiliating the School to the University, which Statute was confirmed by the Lieutenant-Governor on the 30th day of October, 1889.

By an Order-in-Council, approved by the Lieutenant-Governor, on the 6th day of November, 1889, a Principal was appointed, and the management of the School was entrusted to a council composed of the Principal as chairman, and the Professors, Lecturers and Demonstrators appointed on the Teaching Faculty of the School.

By the terms of this order the management and discipline of the School was vested in the Council.

By a Statute of the Senate of the University of Toronto, passed on December 14th, 1900, the teaching staff and examiners of the School of Practical Science, together with the examiners for the degree of B.A.Sc., and professional degree in Engineering, were constituted ex-officio the Faculty of Applied Science and Engineering of the University of Toronto.

By an Order-in-Council dated the 30th day of January, 1903, the Council of the School was made to consist of the Principal, the Professors and Lecturers, together with the Registrar.

By the University Act, 1906, the School of Practical Science was united to the University of Toronto as its Faculty of Applied Science and Engineering.

GRADUATING DEPARTMENTS.

There are seven regular Departments of Instruction:—

1. Civil Engineering.
2. Mining Engineering.
3. Mechanical Engineering.
4. Architecture.
5. Analytical and Applied Chemistry.
6. Chemical Engineering.
7. Electrical Engineering.

leading to the degree of Bachelor of Applied Science. The instruction given in these departments extends over a period of four years and is designed to give the student a thorough knowledge of the scientific principles underlying the practice in the several professions, and also such a training as may make him immediately useful when he commences professional work.

PROFESSIONAL DEGREES.

Bachelors of Applied Science may, after three years spent in professional work, present themselves for the degrees of Civil Engineer (C.E.), Mining Engineer (M.E.), Mechanical Engineer (M.E.), Electrical Engineer (E.E.), or Chemical Engineer (Chem.E.), as the case may be, subject to the rules and regulations established by the University. (See page 79).

FELLOWSHIPS.

Sessional Fellowships of the value of $500 each are awarded annually in the various departments.

The Fellows are required to take such portions of the work of instruction as may be assigned to them by the Council.

Applications for these fellowships are to be made annually in writing to the Secretary of the Faculty on or before the 1st day of May.

ADMISSION AND REGISTRATION.

Candidates will be admitted as undergraduate students in any of the regular departments of instruction on presenting certificates of having passed the Junior or Senior Matriculation examination or its equivalent as defined hereafter. (See page 14.)

The matriculation requirements of this Faculty are based upon the prescription for Junior Matriculation and are as follows:—

1910: English, History, Mathematics and any two of the following, viz., Greek, Latin, French, German, Experimental Science.

1911: English, History, Mathematics and any three of the following, viz., Greek, Latin, French, German, Experimental Science. A candidate who has obtained Honours in Mathematics need pass in only two of the optional subjects.

1912: The same prescription, except that pass standing in Honour Mathematics may be required.

Applications for admission and registration in the various years will be received on and after Sept. 1st. Application forms will be supplied on request, by the Secretary.

JUNIOR MATRICULATION.

GENERAL REGULATIONS.

Candidates for Junior Matriculation must produce satisfactory certificates of good character and of having completed the sixteenth year of their age.

The subjects of Junior Matriculation are as follows:—Latin, English, History, Mathematics and any two of the following: Greek, German, French, Experimental Science.

Pass and honour papers will be set in each of these subjects.

The pass papers are as follows:—Latin authors, Latin Composition; English grammar, English composition, English literature; History; Arithmetic, Algebra, Plane Geometry; Greek authors, Greek composition; German authors, German composition; French authors, French composition; Experimental Science.

The pass standard is forty per cent. of the marks assigned to a paper, with such modification or exceptions as may be deemed proper in consideration of the total number of marks and the confidential reports of the Principal. In 1911 the pass standard will be forty per cent. of the marks assigned to a paper with an average of fifty per cent.; in 1912 the pass standard will be forty per cent. of the marks assigned to a paper with an average of sixty per cent.—the standard for Normal School Entrance.

In 1910 a candidate who failed to obtain pass standing in not more than three papers, may complete Junior Matriculation by passing in these papers at any one subsequent examination. A candidate in 1911 or 1912 who has obtained the average of fifty per cent. or sixty per cent. respectively on all the papers but has failed to obtain forty per cent. in one or two or at most three of these papers may complete Junior Matriculation by passing on these papers at any one subsequent examination.

Further particulars may be obtained on application to the Registrar for curriculum for Junior Matriculation.

Candidates who obtained, prior to 1910, pass standing in at least a majority of the subjects may complete Junior Matriculation by passing in the remaining subjects at a subsequent examination or examinations.

The examination for pass and honour Junior Matriculation is held annually in July at centres in Ontario, and, if application is made to the Senate, the examination may, with the co-operation of the Department of Education, be held at centres outside Ontario.

Applications accompanied by the fee of $5.00 must be sent not later than the 24th of May to the local Public School Inspector, or in the case of candidates intending to write at the University, to the Registrar.

A Junior Matriculation examination, at which no honour papers are set, will be held in September at the University and at such other centres as may from time to time be authorized. Candidates entitled to the privileges of supplemental examinations as well as new candidates, may present themselves at this examination. Applications must be sent to the Registrar not later than the 1st of September.

EQUIVALENT EXAMINATIONS.

A person who has passed the matriculation examination of another University may be admitted *ad eundem statum* on such conditions as the Senate, on application, may prescribe.

The local examinations conducted by the University of Oxford and Cambridge are accepted *pro tanto*.

Certificates of having passed the whole, or all but one, two or three papers of those common to the matriculation and other examination of any of the following examinations will be accepted *pro tanto*.

Province of Ontario.

The Junior and Senior Teachers' examinations, or examinations of the same standard under other names.

Province of Quebec.

The Associate in Arts examination.

Province of New Brunswick.

The examinations for Superior and Grammar School Licenses.

Province of Nova Scotia.

The Junior and Senior Leaving examinations (Grades XI. and XII.).

Province of Manitoba.

The Second Class Teachers' examination.

Province of British Columbia.

The Intermediate and Senior Grade examination.

Province of Prince Edward Island.

The First Class Teachers' License examination.

Province of Alberta.

The Standard VII. and VIII. examinations.

Province of Saskatchewan.

The Standard VII. and VIII. examinations.

Newfoundland.

Intermediate and Associate Grade examinations.

Candidates whose certificates do not cover all the subjects may complete matriculation by passing in the remaining subjects as prescribed by the University, or by passing in the subjects of similar standard as prescribed by the Education Department of the Province by which the certificate was issued.

Other Certificates.

The Senate will consider applications for the recognition of certificates other than those mentioned, as occasion may require.

ADMISSION AD EUNDEM STATUM.

An undergraduate of another University may be admitted *ad eundem statum* on such conditions as the Senate on the recommendation of the Council of the Faculty may prescribe.

An applicant for admission *ad eundem statum* must submit with his petition (1) a calendar of his University giving a full statement of the courses of instruction; (2) an official certificate of character and academic standing.

FEES.

All fees are payable at the Bursar's office between the hours 10 a.m. and 1 p.m. of each week day except Saturday.

The annual fees including tuition, library, laboratory supplies and one annual examination shall be as follows:—

First Year.

If paid in full on or before November 5th.....$100.00
By instalments:
First instalment, if paid on or before November 5th. 50.00
Second instalment, if paid on or before February 5th. 55.00

Second Year.

If paid in full on or before November 5th.....110.00
By instalments:
First instalment, if paid on or before November 5th. 55.00
Second instalment, if paid on or before February 5th. 60.00

Third and Fourth Years.

If paid in full on or before November 5th.....120.00
By instalments:
First instalment, if paid on or before November 5th. 60.00
Second instalment, if paid on or before February 5th. 65.00

The above fees are payable in advance. After November 5th a penalty of $1.00 per month will be imposed until the whole amount is paid. In the case of payment by instalments the same rule as to penalty will apply.

General Fees.

Matriculation, or registration of Matriculation	$ 5.00
Supplemental examination	10.00
Admission ad eundem statum	10.00
Degree of B.A.Sc. (Payable not later than April 1st)	10.00

Dues and Deposits.

(Payable to the Secretary of the Faculty at the time of registration.)

Engineering Society membership	$1.00
Annual deposit	2.00

Charges for waste, neglect and breakage are to be met out of the deposit fee, the balance of which will be refunded to the student at the end of the session.

LODGING AND BOARD.

Accommodation is readily obtainable in numerous private boarding-houses within convenient distance of the University, at a cost of from four dollars and a half a week upwards for comfortable lodging with board; or rooms may be rented at a cost from one dollar and a half per week upwards, and board obtained separately at moderate rates. A list of accredited boarding-houses is kept by the Secretary of the University Young Men's Christian Association, and students are recommended to consult him with reference to the selection of suitable accommodation.

UNIVERSITY RESIDENCES.

The attention of students is directed to the accommodation which has been provided in the new residences situated within the University grounds. These residences will accommodate in all about one hundred and fifty men. Every reasonable comfort is supplied.

The room rental varies from two dollars to three dollars per week, and suitable board may be conveniently obtained at the University Dining Hall at three dollars per week.

The residences and dining hall are under University management.

Applications for rooms should be made in writing to the Registrar of the University at as early a date as possible.

REGULATIONS RESPECTING STUDENTS.

No student will be enrolled in any year, or be allowed to continue in attendance, whose presence for any cause is deemed by the Council to be prejudicial to the interests of the University.

All interference on the part of any student with the personal liberty of another, by arresting him, or summoning him to appear before any tribunal of students, or otherwise subjecting him to any indignity or personal violence, is forbidden by the Council. In particular, students of all Faculties are warned against the practices known as the "hustling" of freshmen and against inter-year or inter-faculty "hustles." Any student convicted of participation in such proceedings will render himself liable to expulsion from the University.

All students shall be in attendance during the whole of each term, unless exempted by special permission of the Council.

A student who in either term of the session, fails to perform the work of his course in a manner satisfactory to the professors in charge, will not be allowed to present himself at the final examinations of the year except by special permission of the Council.

Information as to the text books, instruments and materials to be purchased by the students will be given on registration at the beginning of the session.

REGULATIONS RESPECTING EXAMINATIONS.

Regular Examinations.

Candidates are required to send to the Secretary of the Faculty at least three weeks before the commencement of the Annual Examinations in April, notice in writing of their intention to take such examinations.

No student will be allowed to write at the Annual Examinations who has not paid all fees and dues for which he is liable.

The minimum percentage of marks required to pass in the written examinations will be fixed from time to time by the Council.

The minimum percentage of marks required to pass in the practical work connected with any subject shall be one and one-half times the minimum required in the case of a written examination.

In order to pass the practical examinations in the subjects of applied mechanics, descriptive geometry, electrical design, optics, surveying and architecture, the drawings set in these subjects must be made.

Candidates who fail in passing the Annual Examinations will be required to take again the whole course of instruction, both theoretical and practical, of the year in which they fail before presenting themselves a second time for examination.

Supplemental Examinations.

A candidate who fails in one or two subjects at the annual examinations, will be required to take supplemental examinations in such subjects.

The supplemental written examinations will begin on the 19th of September, 1910.

Candidates are required to send to the Secretary of the Faculty at least ten days before the commencement of the Supplemental Examinations in September, notice in writing of their intention to take such examinations, and to remit to the Bursar the fee of $10.00.

In the case where a candidate fails to pass a supplemental examination it will count as one of the two supplemental examinations which may be allowed him after the next annual examination.

Vacation Work.

Vacation work must be handed in, on or before the first day of the session.

Vacation notes must be on construction only, except in Department 2 (see p. 79), and contain not less than twenty, nor more than thirty pages of sketches. These sketches must be free-hand pencil drawings with figured dimensions.

No notes, whether taken during the session or the vacation will be counted unless made in the standard note books of the Faculty.

The minimum percentage of marks required for practical work must be made in the case of vacation notes.

Honours.

Honours will be granted in each department to the students who pass in all the subjects and obtain at least 66 per cent. of the total number of marks allotted to the department at the annual examinations.

Papers read before the Engineering Society may be considered in granting Honours.

REGULATIONS RESPECTING TERM WORK.

Students working in any laboratory must be governed by the regulations relating thereto as made known from time to time.

No laboratory reports or drawings may be removed from the laboratories without permission. The Council reserves the right to dispose of them as may be thought proper.

Field Work.

No field notes will be counted which have not been taken in the field, and during the hours allotted to such work.

Students taking practical astronomy are required to take observations in the field for time, latitude, and azimuth.

Drafting Rooms.

Drawings prescribed for the first term of the session will not be counted unless finished in that term.

The minimum number of drawings shall be twenty-five, and the maximum number thirty-five, except in the Department of Analytical and Applied Chemistry, in which the number shall be fifteen and twenty-five respectively.

No drawings will be counted which have not been made in the drafting rooms, and during the hours allotted to such work.

Theses.

In the Fourth Year each student is required to prepare a thesis on a subject approved by the Council. Except in cases where the Council gives permission to the contrary before the thesis is begun, the title of the thesis must be sent to the Council for approval before the regular meeting in November. The completed thesis must be handed to the Secretary of the Faculty not later than the first day of the second term and shall become the property of the University. Applications for extension of time beyond the date given must be made to the Council before the regular meeting in December.

EXEMPTIONS.

Applications for exemption from any of the regulations must be made to the Council in writing and the particulars of the case fully stated.

DEPARTMENT OF CIVIL ENGINEERING.

Department 1.

The courses of study in Civil Engineering are designed to give the student a sound training in the fundamental scientific principles on which the practice of the profession is based. The instruction is given by means of lectures and practical work in the field, the drafting room and the laboratory. In this way the student is led to apply the principles developed in the class room.

Formerly the term Civil Engineering included all the branches of the profession, but some of these became so extensive as to acquire distinctive names and fields of work for themselves. Even yet Civil Engineering is so comprehensive as to render it impossible for anyone to master all its branches. It may be said to include surveying and topography; works connected with transportation, such as railroads and canals; municipal works, such as waterworks, sewers, streets and pavements; hydraulic works, such as power development, drainage, irrigation, etc.; structural works, such as bridges, roofs, etc.

Notwithstanding the variety of the branches of Civil Engineering above enumerated, they are underlaid by a comparatively compact body of scientific principles which form the basis of the work of instruction. While the subjects of the first year are largely fundamental, an effort is made, it is thought successfully, to give a professional aspect to the student's work from the very beginning. This is accomplished by the introduction of such subjects as field work and plotting in the curriculum of the first year. In the second and third years the study of fundamental science is continued together with its application to the solution of engineering problems. In the fourth year the student may elect to follow certain optional subjects, which form a continuation of the work of the previous years. Here special stress is laid upon experimental work in the laboratory.

Thesis 21

DEPARTMENT OF MINING ENGINEERING.

Department 2.

The course in Mining Engineering is intended to serve as a preliminary training for those who expect to practice the art of mining or metallurgy. In the first two years it differs very little from the course in civil engineering, in the third year some subjects peculiar to mining and metallurgy are taken up. In the fourth year the subjects are more particularly those of mining and metallurgy. By the choice of subject for thesis in the fourth year the student can follow his particular branch still further, and devote about one-quarter of the time in that year to the part of the studies which interests him most.

In general this course is designed to first give the student a good training in the parts of engineering essential to all branches such as surveying, drafting, etc., and then in the upper years to allow him to follow studies peculiar to mining engineering.

Candidates for the degree in this department will be required to present satisfactory evidence of having had at least six months' practical experience in work connected with mining, metallurgy or geology, for which they must have received regular wages. Certificate forms, giving full details as to acceptable classes of work, will be furnished on application and should be obtained by all students before entering employment.

DEPARTMENT OF MECHANICAL ENGINEERING.

Department 3.

The course in this Department is designed to meet the needs of those students who are intending to take up the work connected with Mechanical Engineering such as: the design of gas engines, steam engines, steam boilers, steam turbines, air compressors, etc.; the design and installation of the machinery connected with power plants and central stations, steam piping and other similar problems. The work is also so arranged that the student becomes somewhat familiar with the design of travelling cranes and mill buildings and similar problems connected with structural steel work.

Since the work of the mechanical engineer and of the electrical engineer are closely allied, the courses in these two departments in the first two years are identical and cover the subjects mentioned below.

In the third year the work becomes more specialized, the mechanical engineers paying more attention to heat engines of various types, and to mill building design and other work of similar nature. The study of electricity is continued and the student gets considerable practice in the mechanical and electrical laboratories.

In the fourth year the student devotes himself still more closely to his chosen work, placing the greater stress on thermodynamics and the theory and testing of heat engines, and problems in machine design. Much time is spent in the mechanical laboratories testing gas and steam engines and other machines. A portion of the time is devoted to electricity and the laboratory connected therewith.

Candidates for the degree in this department will be required to present satisfactory evidence of having had at least eight months' practical experience in one of the principal trades connected with Mechanical Engineering. The object being that graduates may have some practical knowledge of the duties of the workman in this branch of engineering, as distinguished from those of the purely technical man. Certificate forms will be furnished on application. These forms contain full details in regard to the work required.

DEPARTMENT OF ARCHITECTURE.

Department 4.

The instruction in this department is arranged to lay a broad foundation for the subsequent professional life of its graduates, and incidentally, to prepare its students to be immediately useful in an architect's office. The curriculum has been arranged to meet the æsthetic and scientific needs of the profession, and includes History and Principles of Architecture, Freehand Drawing in pencil, ink and color, Architectural Design, Analysis and Criticism of Buildings, Mathematics, Statics, Strength and Elasticity of Materials, Theory of Construction and Heating and Ventilation.

The equipment of the department includes a working library of 1,000 volumes, a large file of periodicals, 2,500 photographs, 2,000 stereographic photos, 4,500 lantern slides, and a large collection of models and casts.

DEPARTMENT OF CHEMICAL ENGINEERING.

Department 6.

In many industries there is a demand for a man who combines the technical knowledge of the mechanical engineer with a knowledge of chemistry. It is to fill this want that the course of Chemical Engineering is designed.

DEPARTMENT OF ELECTRICAL ENGINEERING.

Department 7.

The course in Electrical Engineering is arranged to provide preliminary training for those who would follow any of the various lines of activity connected with electrical industry.

The first two years of the course are devoted to fundamental scientific principles, and incidentally more or less of their application to engineering problems in mechanical, civil, and electrical work. Many problems are solved in the drafting rooms by graphical methods. The third year includes further theoretical work, more particular attention being given to electrical and mechanical studies in theory, operation, and design. The fourth year is devoted to advanced work in alternating current theory and practise combined with similar study in thermodynamics or hydraulics.

A large amount of laboratory practise is provided, most of which belongs to the third and fourth years. In this last year most of the time is spent in laboratory investigations and studies resulting therefrom.

Candidates for the degree in this department will be required to present satisfactory evidence of having had at least eight months' practical experience in one of the principal trades connected with Electrical Engineering. The object being that graduates may have some practical knowledge of the duties of the workman in this branch of engineering, as distinguished from those of the purely technical man. Certificate forms will be furnished on application. These forms contain full details in regard to the work required.

OUTLINE OF LECTURE COURSES.

ARCHITECTURE.

HISTORY OF ARCHITECTURE (Elementary).

Required in Department 4, Year I.; 1 hour per week; both terms.

In this course the development of architecture is treated very briefly and in an elementary manner, from the Pyramids of Egypt to the present, laying special emphasis on the Egyptian, Grecian and Western Asiatic work.

ARCHITECTURAL DESIGN.

Required in Department 4, Year II.; 1 hour per week; both terms.

Elements of planning and composition.

HISTORY OF ARCHITECTURE.

Required in Department 4, Year II.; 1 hour per week; both terms.

Classical, Early Christian, Byzantine and Romanesque.

In connection with this course of lectures the students are expected to work out a number of elementary compositions, applying the history and principles given in the previous lectures.

ORDERS OF ARCHITECTURE.

Required in Department 4, Year II.; 1 hour per week; both terms.

HISTORY OF ORNAMENT.

Required in Department 4, Year II.; 1 hour per week; both terms.

In this course the development is traced from the beginning through Egyptian, Assyrian, Grecian, Roman, Byzantine, Romanesque and Moresque styles. An attempt is made to analyze ornament of the best periods and to systematize the principles followed in composition of form and color.

Building Materials.

Required in Department 4, Year III.

The structural and æsthetic value of the various building materials.

History of Architecture.

Required in Department 4, Year III.
Gothic, Renaissance, Modern.

History of Ornament.

Required in Department 4, Year III.
Gothic, Renaissance, Modern.

Architectural Design.

Required in Department 4, Year III.

Theory of Design, planning and composition, scale, proportion, expression and decoration.

Design of Tall Buildings.

Required in Department 4, Year III.

The structural features particularly incident to tall buildings are taken up, such as the discussion of deep foundations, grillages, arrangement of columns and beams, fire-proofing, wind bracing, details, etc.

Designs of typical building members such as footings, columns, girders, etc., are worked out in the class and drafting rooms.

Text Books:—Architectural Engineering—J. K. Freitag; Skeleton Construction in Buildings—W. H. Birkmire.

Sanitary Science.

Required in Department 4, Year IV

Modern plumbing, its design and installation.

Heating and Ventilation.

Required in Department 4, Year IV.

The design of different systems, where they should be used, heating specifications, etc.

Architectural Design.

Required in Department 4, Year IV.

ASTRONOMY AND GEODESY.

ASTRONOMY, ELEMENTARY.

Required in Department 1, Year II.; 1 hour per week; both terms.

A course in descriptive Astronomy, explaining the ordinary astronomical terms, and describing the various celestial bodies and their motions. In the evenings opportunity will be given for identifying the stars and for observing with telescopes.

Text book:—Introduction to Astronomy—F. R. Moulton.

ASTRONOMY AND GEODESY.

Required in Department 1, Year III.

The course of lectures deals with the determination of time, latitude, longitude and azimuth, by methods adapted to the use of the surveyor's transit and the sextant. It is designed to fulfil the requirements of the final examinations for Ontario and Dominion Land Surveyors.

In Geodesy an account is given of the principles and methods of a secondary triangulation survey, also of the principles involved in the North-West system of survey.

Text book:—Practical Astronomy as applied to Geodesy and Navigation, Doolittle; Nautical Almanac, 1911.

ASTRONOMY.

Required in Department 1, Year IV.

The lecture course in this subject comprises the theory and adjustment of the instruments used in connection with a geodetic survey; the methods of taking and reducing observations for time, longitude, latitude, and azimuth, with the precision required on such a survey; and other matters relating to these subjects.

GEODESY AND METROLOGY.

Required in Department 1, Year IV.

The lecture course includes a description of the methods of measuring base lines, and the angles of a triangulation; the geometry of the spheroid, with applications to geodetic problems; the computation of geodetic positions; the solution of large triangles on the earth's surface, and the adjustment of a triangulation; trigonometric and precise spirit levelling; the determination of the figure of the earth by arc measurements, and by the pendulum; the theory of map projections, etc.

BIOLOGY.

Elementary Biology.

Required in Department 5, Year I; 2 hours per week.

A course of two lectures a week throughout the session is designed as an introduction of the whole range of biological studies. After a sketch of the scope and objects of these, the lectures will treat (*a*) of the fundamental principles of biology, as illustrated by the simplest animals and plants; (*b*) of typical forms of higher plants in ascending order; (*c*) of typical forms of animals in a similar way; and (*d*) of the structure and functions of the human body. Students are recommended to make use of the Biological Museum in connection with this course of lectures. For reference; Jeffrey Parker, Elementary Biology; Ramsay Wright, High School Zoology; Atkinson, Elementary Botany; Huxley, Lessons in Elementary Physiology.

Advanced Biology.

Optional in Department 5, Year II.

A short course of instruction in the Morphology and Physiology of Bacteria, Moulds and Yeast Fungi.

BUSINESS.

Accounting.

Required in Year I; 1 hour per week; both terms.

The principles of accounting; illustrated by typical accounts.

Banking and Finance.

Required in Year II; 1 hour per week; both terms.

Money and the instruments of credit; bond issues, loans, sinking funds, etc.

Limited Companies.

Required in Year III.

Partnerships; the history and development of the limited liability company; the Companies Acts; Company finance.

Contracts and Specifications.

Required in Departments 1 and 4, Year IV.

Contract law; principles of specifications.

Cost-keeping, etc.

Required in Departments 2, 3, 5, 6, and 7, Year IV.

Works management, accounts, analysis of costs, reports.

CHEMISTRY.

ANALYTICAL CHEMISTRY.

Required in Department 5, Year II; Departments 2 and 6, Year III.

The principles of chemical analysis; select gravimetric and volumetric methods; technical analysis.

ELEMENTARY CHEMISTRY.

Required in Departments 1, 2, 3, 4, 5, 6 and 7, Year I; 2 hours per week; both terms.

Elementary chemistry with experimental illustrations.

Text book:—Briefer Course—Remsen.

ENGINEERING CHEMISTRY.

Required in Departments 1, 2, 3, 5, 6 and 7, Year II; 1 hour per week; second term.

A study of the industrial production and application of heat and light, and of the chemistry of fuel and the products of combustion.

ENGINEERING CHEMISTRY.

Required in Departments 1, 2, 3, 5, 6 and 7, Year III; Department 4, Year II.

The application of chemistry to engineering problems, air, water, sewage, the materials of construction, explosives, etc.

ELECTROCHEMISTRY.

Required in Departments 5, 6 and 7, Year III.

An elementary course illustrated by experiments.

ELECTROCHEMISTRY.

Optional in Departments 5, 6 and 7, Year IV.

More advanced lectures are given on the theory of solutions and electrolysis, and the application to the practice of electro-deposition and electrolytic refining of metals. The course also includes lectures on the electric furnace, with special consideration of the efficiency.

Text books:—Electrometallurgy—Borchers; Electrochemistry—LeBlanc; Electrochemistry—Lupke.

INDUSTRIAL CHEMISTRY—INORGANIC.

Required in Departments 5 and 6, Year II; 1 hour per week; both terms.

Manufacture of salts, acids, alkalies, and inorganic chemicals.

Text book:—Industrial Chemistry—Thorp.

Industrial Chemistry—Organic.

Required in Departments 5 and 6, Year III.

The study of petroleum and its products, coal tar and its products, the destructive distillation of wood, fats, oils, soap, sugar, starch, and gum; fermentation industries, etc.

Text book:—Industrial Chemistry—Thorp.

Inorganic Chemistry.

Required in Departments 5 and 6, Year I.; 1 hour per week; both terms.

A study of the elements and their important inorganic compounds.

Text book:—Introduction to General Inorganic Chemistry—Alex. Smith.

Inorganic Chemistry.

Required in Departments 2, 5 and 6, Year II; 1 hour per week; first term.

The chemistry of the metals.

Organic Chemistry.

Required in Departments 1, 2, 3, 4, 5, 6 and 7, Year II; 1 hour per week; first term.

An elementary course.

Text book:—Theoretical Organic Chemistry—Cohen.

Organic Chemistry.

Required in Departments 5 and 6, Year II; 1 hour per week; both terms.

An elementary course dealing with the aliphatic and aromatic series of compounds.

Text book:—Theoretical Organic Chemistry—Cohen.

Organic Chemistry (A).

Required in Department 5, Year III.

A detailed study of the compounds of carbon.

Text book:—Organic Chemistry—Perkin and Kipping.

Organic Chemistry (B).

Required in Department 5, Year III.

This course includes the consideration of the several kinds of stereoisomerism, desmotropism, etc.

ORGANIC CHEMISTRY.

Required in Departments 5 and 6, Year IV.

Special chapters in organic chemistry; dyestuffs, sugars, laboratory methods, etc.

Text books:—

Lehrbuch der Organischen Chemie—Meyer und Jacobsen; Arbeitsmethoden für organisch-chemische Laboratorien—Lassar-Cohn; Synthetic Dye Stuffs—Cain and Thorpe; Organic Chemistry for advanced Students—Cohen.

PHYSICAL CHEMISTRY.

Required in Departments 5 and 6, Year II; 2 hours per week; both terms.

An introductory course on the elements of chemical mechanics, and the theory of solutions.

INORGANIC CHEMISTRY.

Required in Departments 5 and 6, Year IV.

Selected chapters in chemical theory.

SANITARY AND FORENSIC CHEMISTRY.

Optional in Departments 5 and 6, Year IV.

The composition and examination of air, water and food; poisons and their detection.

SANITARY CHEMISTRY AND BACTEROLOGY.

Optional in Department 1, Year IV.

The study of water supply and sewage disposal.

CHEMICAL PLANT.

Required in Departments 5 and 6, Year III.

A study of chemical machinery and apparatus.

DRAWING.

DESCRIPTIVE GEOMETRY.

Required in Departments 1, 2, 3, 4, 6 and 7, Year I; 1 hour per week; both terms.

This course of lectures deals chiefly with the principles of orthographic and oblique projections and the application of such principles to the solution of problems relating to straight lines and planes.

Text books:—Elements of Descriptive Geometry—Church; Descriptive Geometry—Millar.

Reference:—Davidson.

DESCRIPTIVE GEOMETRY.

Required in Departments 1, 2, 3, 4, 6 and 7, Year II; 1 hour per week; both terms.

This course of lectures is a continuation of the work taken in the first year with the following additions: Problems relating to curved surfaces, principles of shades and shadows, and perspective.

DESCRIPTIVE GEOMETRY.

Required in Department 1, Year III.

This course of lectures deals with spherical projections, the principles of map making, and the graphical solution of spherical triangles.

DESCRIPTIVE GEOMETRY.

Required in Department 4, Year III.

Advanced work in shades and shadows and perspective.

ELECTRICITY.

MAGNETISM AND ELECRICITY.

Required in Departments 3, 5, 6 and 7, Year I; 2 hours per week; first term.

A course of lectures on general principles relating to magnetism, electricity, electromagnetism, electrostatics, etc., illustrated largely from engineering apparatus.

Text book:—Elementary Electricity and Magnetism—S. P. Thompson.

ELECTRIC CIRCUITS.

Required in Departments 3, 5, 6 and 7, Year I; 2 hours per week; second term.

This course of lectures concerns chiefly fundamental principles relating to electric circuits and leads to consideration of such problems as the distribution of electric energy through lines and networks and the division of load between generators.

Text Book:—Electrical Problems—Hooper and Wells.

ELECTRICITY.

Required in Departments 3, 5, 6 and 7, Year II; 2 hours per week; both terms.

Deals with the theory of electrical measurements, and detailed study of various methods applicable under different conditions in engineering practice to the measurement of resistance, current, potential difference, power and energy; calibration of commercial measuring instruments. The effect of choice of conditions of measurement on the accuracy of the result is considered.

Text book:—Electrical Measurements—Carhart and Patterson.

ELECTRICITY.

Required in Department 2, Year III; Department 1 and 4, Year IV.

A course designed to fit the requirements of non-electrical students. A study of essential principles is followed by discussion of electrical apparatus, plants, power transmission, railways, etc.

Text book:—Elementary Electricity and Magnetism—Jackson.

MAGNETISM AND ELECTRICITY.

Required in Departments 3, 6 and 7, Year III.

A course of lectures on theory of magnetism and magnetic circuits, theory of direct current generators, motors, etc.

Text book:—Elements of Electrical Engineering—Franklin and Esty.

ALTERNATING CURRENT.

Required in Department 7, Year III; Department 3, Year IV; 2 hours per week; second term.

A first course of lectures on the subject, covering principles of measurement and leading to the analytical and graphical treatment of the simpler problems relative to alternating current circuits and machinery.

Text book:—Elements of Electrical Engineering—Franklin and Esty.

ELECTRICAL DESIGN.

Required in Department 7, Year III.

A course of lectures dealing with design of electric machinery and plants, accompanied by designs to be worked out in the design room.

References:—Dynamo-electric Machinery—S. P. Thompson; Electric Machine Design— Parshall and Hobart.

Applied Electricity.

Required in Department 7, Year IV.

This course deals by analytical and vector methods with the theory of alternating current circuits and machinery. Applications of theory are considered with regard to transformers, single and polyphase generators, synchronous motors and rotary converters, induction and commutating series motors, transmission lines, wave analysis, etc.

Text books:—Alternating Currents—Franklin and Williamson; Elements of Electrical Engineering—Franklin and Esty.

GEOLOGY.

Geology.

Required in Departments 2 and 5, Year II; Department 1, Year III; 1 hour per week; both terms.

This course deals chiefly with historical geology with special reference to Canadian formations.

Reference books:—Introduction to Geology—Scott; Text Book of Geology—Dana.

Economic Geology. (Including Dynamical and Structural Geology.)

Required in Departments 2 and 5, Year III; Department I, Year IV.

A study of the more important economic rocks, minerals and ores with their geological associations. Special attention paid to Canadian deposits.

Ore Deposits.

Required in Department 2, Year III.

Discussion of the origin and classification of ore deposits in a general way, the mode of occurrence of the chief metals, and statistics of production, special attention being given to the metals mined in Canada.

Advanced Geology.

Required in Department 2, Year IV.

(A) Pre-Cambrian Geology,—An account of the Keewatin, Huronian and Laurentian rocks of Canada, with their distribution, structural relations and economic features, and briefer accounts of similar formations in the United States and elsewhere. Works of Reference, Reports of the United States and Canadian Geological Surveys, of the Bureau of Mines of Ontario, etc.

(B) Pleistocene Geology.—Lectures on the formation and distribution of the drift deposits of North America, with brief references to other regions. Glacial, Interglacial and Post Glacial beds are described, changes of climate are discussed with their probable causes, and the economic features of the clays, sands and gravels are pointed out. A weekly excursion is made during October and November to points of interest near Toronto, which is the centre of the most important development of Pleistocene in America.

(C) Physiography.—A course of lectures on the surface forms of the earth, with the geological factors which have produced them. The broad features of the earth, its plains, tablelands, hills, valleys, mountains, oceans, rivers and lakes are discussed in a general way, methods of topographical surveys and mapping are referred to, and the chief physiographic areas of Canada are described.

MINING GEOLOGY.

Required in Department 2, Year IV.

A course of lectures on geological problems associated with mining, typical mining regions in Canada, the United States and elsewhere being discussed from the geological side. Works of reference, Mineral Industry and the books mentioned under (A).

MATHEMATICS.

ALGEBRA.

Required in Departments 1, 2, 3, 4, 5, 6 and 7, Year I; 2 hours per week; both terms.

Simple equations of one, two and three unknown quantities; quadratic equations of one and two unknown quantities; elementary treatment of variation, proportion and progressions; interest forms and annuities, permutations, combinations, binomial theorem.

Text book:—Intermediate Algebra—De Lury.

ANALYTICAL GEOMETRY.

Required in Departments 1, 2, 3, 4, 5, 6 and 7, Year I; 1 hour per week; both terms.

The course in Elementary Analytical Geometry covers the more familiar propositions in connection with the straight line, circle, parabola, ellipse and hyberbola. The subject is treated so as to illustrate the general methods of analytical geometry.

Calculus, Differential and Integral.

Required in Departments 1, 2, 3, 4, 6 and 7, Year II; Department 5, Year II, optional; 2 hours per week; both terms.

This is an elementary course in the infinitesimal calculus, but adequate to afford a knowledge of the character and methods of the subject and to enable students in chemistry, engineering, etc., to understand such of their text books as introduce the calculus.

Least Squares, Method of.

Required in Department 1, Year III.

The course of lectures includes: The general principles of probability the law of error, direct measurements of equal and different weights; mean square and probable errors; indirect measurements; conditioned observations; applications to empirical constants and formulæ, etc.

Text book:—Least Squares—Merriman.

Trigonometry, Plane.

Required in Departments 1, 2, 3, 4, 5, 6 and 7, Year 1; 2 hours per week; both terms.

Trigonometrical ratios with their relations to one another, sines, etc., of the sum and difference of angles with deduced formulæ, solutions of triangles, expressions or the area of triangles, radii of circumscribed, inscribed and escribed circles.

Text book:—Practical Trigonometry—Plane and Fawdry.

Trigonometry, Spherical.

Required in Department 1, Year II.; 1 hour per week; first term.

The course of lectures includes the derivation of formulæ and their application to the solution of triangles and to practical problems.

Text book:—Spherical Trigonometry—Todhunter and Leatham.

MECHANICS.

Cements and Concrete.

Required in Departments 1 and 4, Year III.

A short course of lectures on the testing of cements, the use of concrete plain and reinforced, and the theory of reinforced concrete.

CEMENTS AND CONCRETE.

Required in Department 4, Year IV.; optional in Departments 1 and 3, Year IV.

Manufacture, testing and use of Portland cement; concrete and reinforced concrete; mathematical theory of reinforced concrete.

Reference books:—Reinforced Concrete—Buel and Hill; Principles of Reinforced Concrete Construction—Turneaure and Maurer; Concrete, Plain and Reinforced—Taylor and Thompson.

DYNAMICS.

Required in Departments 1, 2, 3, 4, 6, and 7, Year I.; 2 hours per week; both terms.

Kinematics and dynamics of rigid bodies, motion of translation, acceleration, graphics, the laws of motion, impulse and momentum, work and energy, power of pumps, etc.

Text book:—Tutorial Dynamics—Briggs and Bryan.

DYNAMICS OF ROTATION.

Required in Departments 1, 2, 3, 6 and 7, Year II.; 1 hour per week; both terms.

Angular motion, velocity and acceleration, moment of inertia, simple harmonic motion, the pendulum, centres of mass, suspension and percussion, the phenomena of rotating bodies with special reference to such as fly wheels, governors, etc.

Text book:—Dynamics of Rotation—Worthington.

RETAINING WALLS, FOUNDATIONS AND DAMS.

Required in Department 1, Year IV.

This course of lectures is devoted to the design of the structures mentioned. Preparatory to the discussion of the practical aspects of the subject, and in order to gain familiarity with the fundamental principles involved, a large part of the first term is given over to the consideration of the theory of compound stress. The most approved forms of construction of retaining walls, footings, abutments, piers and dams are then described, and typical designs are worked out in the class and drafting rooms.

Text books and books of reference:—Retaining Walls for Earth—M. A. Howe; Walls, Bins and Grain Elevators—M. S. Ketchum; A Practical Treatise on Foundations—W. M. Patton; A Treatise on Masonry Construction—I. O. Baker; Design and Construction of Dams—E. Wegmann.

Heat Engines.

Required in Departments 3 and 6, Year III.

This course in heat engines is intended for students in Mechanical Engineering, to be supplementary to the general course of lectures in thermodynamics given in the third year.

The principal commercial forms of heat engines are dealt with in a more or less descriptive manner: special attention is given to considerations affecting the design of the ordinary forms of steam engines, gas engines and oil engines.

Hydraulics.

Required in Departments 1, 2, 3 and 7, Year III.

This is an introductory course of lectures in hydraulics and is devoted to the development and discussion of fundamental formulæ relating to the flow of water in pipes, the measurement of discharge by various methods, such as orifices and weirs, the conditions of flow obtaining in open channels, artificial and natural, and in pipes flowing partially full; together with other kindred subjects.

The object of this course is to provide the student with a good working knowledge of the fundamental principles of hydraulics; such as is useful in practical work, and is necessary to the intelligent investigation of more advanced problems, such as the design of turbines, water wheels and power plants generally.

Text book:—Treatise on Hydraulics—Merriman.

Hydraulics.

Optional in Year IV.

Following up the third year course in this subject the theory already acquired is applied to the solution of problems connected with branched pipes, water mains discharging at various points along their length, the effect of a dam on the water level at any point on a stream and numerous other problems.

The most important question considered and to which most of the lectures are devoted is the theory of turbines and centrifugal pumps, the effect of the design on the speed, discharge, power and efficiency being fully taken up.

Text books:—Hydraulic Motors, etc.—Bodmer; Centrifugal Pumps—Innes; Hydraulics—Merriman.

MACHINE DESIGN.

Required in Departments 3, 6 and 7, Year III.

This course of lectures is principally concerned with the application of the principles of kinematics and the theory of the strength and elasticity of materials to the design of machine parts, such as shafting, gearing, journals, clutches, etc.

In connection with these lectures, simple problems involving the design of machine parts are set for the student to work out in the drafting rooms, such drawings, with the necessary calculations, forming a part of the practical work in the subject.

Text book:—Machine Design, Construction and Drawing—Spooner.

MACHINE DESIGN.

Required in Departments 3 and 6, Year IV.

This course of lectures is a continuation of the course given in the third year, the problems in design being of a more advanced order.

Text book:—Machine Design, Construction, and Drawing—Spooner.

MECHANICS OF MACHINERY.

Required in Departments 3 and 7, Year III.

In this course the questions dealt with are the construction of acceleration diagrams, the determination of the accelerations of various parts of machines, the kinetic energy of machines, the effect of the weights and accelerations of parts on the velocity of the fly-wheel and the proper weight of the latter to fulfil given conditions. The theory of various forms of governors is also fully taken up and the efficiency of machines. The discussion of the design of slide valves and gears is continued in this course.

Text books:—Mechanics of Machinery—Kennedy; Slide Valve Gears—Halsey.

MILL BUILDING DESIGN.

Required in Department 3, Year IV.

The structural problems involved in the design of steel mill buildings are discussed in this course of lectures. Types of buildings, various styles of trusses, columns and details are described and the complete design of a steel mill building is worked out in the class and drafting rooms.

Text book:—Mill Building Design—Milo S. Ketchum.

Statics.

Required in Departments 1, 2, 3, 4, 6 and 7, Year I.; 2 hours per week; both terms.

This course of lectures deals with forces in a single plane, and concerns chiefly the calculation of tension, compression and shearing stresses in frame structures and solid beams. It also deals with the consideration of problems relating to friction.

Steam Engines.

Required in Departments 3 and 7, Year II.; 1 hour per week; first term.

This course of lectures includes a discussion of the principles of action of the steam engine; also the theory and design of various simple forms of valve gears used in the operation of such engines.

Strength of Materials.

Required in Departments 1, 2, 3, 4, 6 and 7, Year II.; 2 hours per week; both terms.

Elasticity and strength of materials mathematically treated, including tension, compression and shear; the strength of pipes, boilers and riveted joints; stresses and deflections in beams and columns; torsion and shear in shafts; suddenly applied loads; repeated stresses; resilience.

Text book:—Mechanics of Materials—Merriman.

Strength and Elasticity of Materials.

Optional in Year IV.

Most of the work taken up is in connection with structures in which the stresses are statically indeterminate.

Reference books:—Modern Framed Structures—Johnson; Roofs and Bridges, Part IV—Merriman and Jacoby.

Steel and Iron.

Optional in Year IV.

In this course of lectures are discussed the relations between the composition of steels and irons and their physical properties. The effects of heat treatment and the constitution and structure as revealed by the microscope, are studied. The subjects taken up in Year III. are continued.

THEORY OF CONSTRUCTION.

Required in Department 1, Year III.

In the first term, the theory relating to the design of box and plate girders is covered fully, and the complete design of a plate girder span is worked out in the class and drafting rooms.

The second term is given chiefly to the design of a riveted truss highway span and a pin-connected truss railway span, the complete designs being made in the lectures and drafting rooms. Restrained, continuous and trussed beams complete the term's work.

THEORY OF CONSTRUCTION.

Required in Departments 2, 3, 4, and 7, Year III.

The work is practically the same as that for Department 1 in the first term except that a runway girder is designed instead of a plate girder bridge span, and that restrained, continuous and trussed beams are discussed at the end of the term.

Text books:—Modern Framed Structures—Johnson, Bryan and Turneaure; Roofs and Bridges, Part III, Bridge Design—Merriman and Jacoby; Pocket Companion—Cambria Steel or Carnegie.

THEORY OF MECHANISM.

Required in Departments 3 and 7, Year II.; 2 hours per week; both terms.

This course of lectures treats of the motions of machines, the latter being assumed to be of sufficient strength to resist acting forces. The formation of machines is dealt with in a general way and investigations of the velocities of points and links are made. The design of gear teeth and the application of trains of gears are taken up, also problems in static equilibrium.

Text books:—Mechanics of Machinery—Kennedy; Elements of Mechanism—Goodeve.

THERMODYNAMICS.

Required in Departments 3, 6 and 7, Year III.; Department 1, Year IV.

In this course of lectures the subject is treated in such a way as to make it of practical value and give a working acquaintance with the principles on which it is based. After the elementary ideas have been given and the proofs of the properties of Carnot's cycle, applications of the subject are made to the perfect gas and to saturated steam and to the various types of engines. Temperatures are taken from the air thermometer.

Thermodynamics.

Required in Department 2, Year IV.; 1 lecture per week; both terms.

This course is especially designed to give the Mining Engineer a working knowledge of Thermodynamics as applied to the perfect gas so that he will be able to understand clearly the action of air compressors, etc. After deducing general principles, the efficiency of compressed air transmission and the relative merits of different types of compressors is discussed.

Thermodynamics.

Optional in Year IV.

This is a continuation of the introductory course, the subject being here treated from a general standpoint, and the ideas of entropy and of the absolute scale of temperatures being introduced. The course includes the treatment of saturated and superheated vapours, gases, the flow of fluids, chimney and boiler efficiency and the theory of various engines and other appliances including air compressors, refrigerating machines, injectors and the various forms of link motions and radial valve gears.

Text books:—Thermodynamics—Peabody; Steam Tables—Peabody.

MINERALOGY.

Crystallography.

Required in Department 5, Year III.

A course devoted to lectures and practical work on the geometical and optical properties of crystals, preparing the student for the study of rocks in thin sections and for the examination of crystallized substances, natural and artificial, under the polarizing microscope.

ELEMENTARY MINERALOGY.

Required in Department 5, Year I, and in Department 2, Year II.; 2 hours per week; first term.

After introducing the student to the chief chemical, physical and crystallographic characteristics of minerals, the course becomes descriptive and deals with about one hundred of the minerals most important from the industrial or scientific point of view.

Text books:—Minerals and how to study them—Dana; Text Book of Mineralogy—Dana.

PRIMARY MINERALOGY.

Required in Department 1, Year II; 2 hours per week; first term.

A very brief introduction to the study of minerals and rocks.

Text books:—Minerals and how to study them—Dana; Handbook of Rocks—Kemp.

ELEMENTARY PETROGRAPHY.

Required in Department 2, Year III.

A course of lectures and laboratory work introducing the student to the macroscopic study of rocks.

Text books:—Handbook of Rocks—Kemp; Rocks and rock minerals—Pirsson.

GENERAL PETROGRAPHY.

Required in Department 2, Year IV.

Study of the chief rock-forming minerals and of some phases of petrography not covered in the course of the previous year.

MINING, METALLURGY AND ORE DRESSING.

MINING.

Required in Department 2, Year II.; 1 hour per week; one term.

An introduction to the study of mining and ore dressing methods.

MINING.

Required in Department 2, Year III.

General mining methods.

Mining.

Required in Department 2, Year IV.

Special mining methods, examinations, reports.

Metallurgy.

Required in Departments 2, 5 and 6, Year II.; 1 hour per week; one term.

An introduction to the study of general metallurgy.

Metallurgy.

Required in Departments 2, 5 and 6, Year III.

General metallurgy of gold, silver, lead and copper.

Metallurgy.

Required in Departments 2, 5 and 6, Year IV.

Advanced studies in the metallurgy of gold, silver, copper and lead.

Metallurgy of Iron and Steel.

Required in Departments 1, 2, 3, 5, 6, and 7, Year III.

The physical properties of iron and steel and the circumstances that influence the strength, etc., of iron. The different modes of manufacture of iron and steel and the effect of different processes of making on the resulting products. Explanations of specifications for iron and steel adopted by engineers.

Ore Dressing.

Required in Department 2, Year III.

Ore Dressing.

Required in Department 2, Year IV.

MODERN LANGUAGES.

French.

Required in Department 4, optional in Departments 1, 2, 3 and 7, Years I and II.; 1 hour per week; both terms.

An elementary course intended to train the student in the translation of scientific journals and treatises.

German.

Required in Departments 5 and 6, optional in Departments 1, 2, 3 and 7, Years I and II.; 1 hour per week; both terms.

An elementary course intended to train the student in the translation of scientific journals and treatises.

PHYSICS.

ACOUSTICS.

Required in Department 4, Year III.

The general principles of acoustics, reflection, transmission and absorption of sound. The application to building acoustics.

HYDROSTATICS.

Required in Departments 1, 2, 3, 4, 5, 6 and 7, Year II.; 1 hour per week; second term.

Laws of fluid pressure and application to machines, density of solids and fluids, theory of flotation.

OPTICS.

Required in Departments 1, 2, 3, 4, 5, 6 and 7, Year II.; 1 hour per week; first term.

The laws of reflection, refraction and transmission of light, photometry; theory of optical instruments; industrial photography and blue printing.

RAILWAY ENGINEERING.

Required in Department 1, Year IV.

The object of this course is to make the student acquainted with the general principles of railroad and street railway engineering and the subject will be studied from the standpoint of—economic theory of location; train resistance; effect of grade, distance and curvature and rise and fall; maintenance of way; yards and terminals; tunnels, and street railway practice.

SURVEYING.

SURVEYING.

Required in Departments 1, 2 and 4, Year I; 1 hour per week; both terms.

The lecture course includes—the general principles; surveying with the chain, the compass and chain and the transit and chain; the applications of trigonometry to inaccessible heights and distances; mensuration of surfaces and solids, co-ordinate surveying, division of land, etc.

Text books:—Land Surveying—Gillespie; Theory and Practice of Surveying—Johnson.

Surveying.

Required in Departments 1, 2 and 4, Year II.; 1 hour per week; both terms.

This course of lectures takes up in detail, simple, reverse and compound curves as applied to railroad surveying. It also includes stadia, plane table and photographic surveying as applied to topographic work and also the main features of mine and hydrographic surveying.

Text books:—Henck, Shunk, Searles, Allen (Field books for Engineers); Theory and practice of surveying—Johnson; Plane surveying—Raymond.

Surveying and Levelling.

Required in Departments 1 and 2, Year III.

This course of lectures takes up the work of the railroad engineer on construction, including profiles, cross sectioning, computation of volume of earth work, overhaul, transition curves, laying out turnouts, frogs and switches, etc.

Also a discussion of trigonometric and barometric levelling.

Text books:—Field Engineering—Searles; Railroad Curves and Earthwork—Allen.

OUTLINE OF LABORATORY COURSES.

ASSAYING.

ASSAYING.

Required in Departments 2, 5 and 6, Year III.

Assaying of various ores for gold, silver, lead and copper.

ASSAYING.

Required in Departments 2, 5 and 6, Year IV.

Continuation of the work of Year III.

ARCHITECTURE.

ARCHITECTURE.

Work on freehand drawing, pen and ink drawing, architectural sketching in black and white, and in color, architectural design.

ASTRONOMY AND GEODESY.

FIELD WORK.

Required in Department 1, Year III.

The practical work in this subject comprises observations in the field with the transit and sextant for the determination of time, latitude and azimuth by the methods described in the lectures.

ASTRONOMY, GEODESY AND METROLOGY.

Optional in Year IV.

The practical work in the above subjects includes the observation of meridian transits for time and longitude determinations, and of prime vertical transits for latitude, with the astronomical transit instrument; the observation of meridian zenith distances of stars, and of azimuths at elongation for latitude, with the alt-azimuth; theodolite observations for azimuth; observations for latitude with the zenith telescope; the investigation of the constants of the instruments used, and the reduction of all observations; the measurement of a base line with the steel tape, and the determination of the constants of the tape; the measurement of the angles of a triangulation and the adjustment of the angles of a network of triangles, etc.

BIOLOGY.

Elementary Biology.

Required in Department 5, Year II.; 3 hours per week; both terms.

An elementary course of laboratory work on the general structure and identification of plants and animals, and the use of the microscope in the examination of tissues and products.

CHEMISTRY.

Chemistry.

Required in Department 5, Year 1.; about 17 hours per week; both terms.

Quantitative experiments illustrating the use of the sensitive balance and confirming the fundamental laws of chemistry; qualitative inorganic analysis; quantitative analysis of pure salts; inorganic preparations.

Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

Chemistry.

Required in Departments 2 and 6, Year I.; 3 hours per week; first term.

An elementary course of experiments to illustrate the use of the sensitive balance, to verify some of the laws which form the basis of the science and to serve as an introduction to quantitative laboratory methods. Instruction given as required before each period.

Chemistry.

Required in Departments 1, 2, 3, 4 and 7, Year II.; 6 hours per week; one term.

Practice in elementary qualitative and quantitative analysis.

Text book:—A Smaller Chemical Analysis—Newth.

Chemistry.

Required in Department 2, Year II.; 3 hours per week; both terms.

Gravimetric determination of metals and acid radicals.

Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

CHEMISTRY.

Required in Department 5, Year II.; 14 hours per week; both terms.

The course comprises gravimetric and volumetric estimation of metals, acidimetry and alkalimetry and the preparation of inorganic and organic substances.

Text books:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth; Practical Methods of Organic Chemistry—Gattermann.

CHEMISTRY.

Required in Department 6, Year II.; 6 hours per week; both terms.

In this course qualitative chemical analysis is well covered, also a certain amount of gravimetric analysis applied to the metals and acid radicals.

Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

CHEMISTRY.

Required in Department 2, Year III.

This course includes acidimetry and alkalimetry and the technical analysis of ores and furnace products.

Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

CHEMISTRY.

Required in Department 5, Year III.

Technical analysis of iron and steel alloys, ores, furnace products, ceramic materials, foods, gases, fuels, etc.; organic preparations.

CHEMISTRY.

Required in Department 6, Year III.

Technical analytical methods, acidimetry, etc.

CHEMISTRY.

Required in Departments 5 and 6, Year IV.

Advanced laboratory work in option selected.

SANITARY CHEMISTRY AND BACTERIOLOGY.

Optional in Department 1, Year IV.

The examination of water, chemically and bacteriologically.

ELECTROCHEMISTRY.

Required in Departments 5, 6 and 7, Year III.

Quantitative measurements to accompany the elementary electrochemistry lectures.

DRAWING.

DRAWING.

Required in Departments 1 and 2, Year I.; about 16 hours per week.

Copying from the flat, lettering, topography; graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; the plotting of original surveys; measured drawings.

DRAWING.

Required in Department 4, Year I.; about 15 hours per week.

Copying form the flat, lettering, topography, freehand drawing in black and white, both from copies and models; the graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; measured drawings.

DRAWING.

Required in Department 5, Year I.; about 9 hours per week.

Copying from the flat, lettering, measured drawings.

DRAWING.

Required in Departments 3, 6 and 7, Year I.; about 20 hours per week.

Copying from the flat, lettering, topography; graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; measured drawings.

DRAWING.

Required in Departments 1 and 2, Year II.; Department 1, about 10 hours per week; Department 2, about 6 hours per week; both terms.

Coloring and shading as applied to both topographical and construction drawings; problems in descriptive geometry relating to solids bounded by curved surfaces; principles of shades, shadows, and perspective; solution of problems in optics and strength of materials; measured drawings; elementary design.

DRAWING.

Required in Departments 3 and 7, Year II.; about 10 hours per week; both terms.

Coloring and shading as applied to construction drawings; problems in descriptive geometry relating to solids bounded by curved surfaces; principles of shades, shadows, and perspective; solution of problems in optics, theory of mechanism and strength of materials; measured drawings; elementary design.

DRAWING.

Required in Department 4, Year II.; about 18 hours per week; both terms.

Coloring and shading as applied to construction drawings. Freehand drawing, including water colors and monochrome; exercises from the orders of architecture; problems in descriptive geometry, relating to solids bounded by curved surfaces; principles of shades, shadows and perspective; solution of problems in optics and strength of materials; measured drawings; elementary design.

DRAWING.

Required in Department 6, Year II.

Same as Department 3, with exception that Department 6 does not include theory of mechanism.

DRAWING.

Required in Department 1, Year III.

Principles of map making, spherical projection, plotting of original surveys relating to topographical and railway work; problems in thermodynamics and theory of construction; original design of various structures; measured drawings.

DRAWING.

Required in Department 2, Year III.

Plotting of original surveys, relating to topographical and railway work and mining; problems in thermodynamics and theory of construction; original design; measured drawings.

DRAWING.

Required in Department 4, Year III.

Problems in descriptive geometry, shades, shadows and perspective; problems in theory of construction; advanced work in water colors and monochrome; original design including framed structures; measured drawings.

ELECTRICITY.

Electricity.

Required in Departments 3, 5, 6 and 7, Year I.; 3 hours alternate weeks; both terms.

A course of experiments, given in logical order, designed to demonstrate fundamental principles in connection with the generation and flow of currents in electrical circuits. The work is associated with the lecture courses, magnetism and electricity, and electric circuits.

Electricity.

Required in Departments 3, 5, 6 and 7, Year II.; 2½ hours per week; both terms.

This laboratory course is closely associated with the lecture course on electricity for the second year. The more important and useful methods of testing generators and circuits for electromotive force, resistance, current, grounds, etc., are practised, often under conditions such as occur in practice. The work also includes methods of calibration of measuring instruments for voltage, current, power and energy, and certain studies of properties of incandescent lamps.

Electricity.

Required in Departments 3, 6 and 7, Year III.

This laboratory course is intended to afford the student an opportunity to become familiar with principles involved in continuous current shunt, series and compound wound generators and motors, and, to some extent, alternating current circuits and machinery. Other sections of the work deal with the magnetic properties of iron and steel, and study of iron losses in transformers and generators.

The course is arranged to stand in close relation to the lecture courses in the subjects of magnetism and electrical design for Year III, and to certain design work.

Applied Electricity.

Required in Department 7, Year IV.

This laboratory course involves a thorough study of principles and properties of single and polyphase circuits and apparatus. Both vector and analytical methods are applied to the solution of problems based on tests made on laboratory machines.

The work deals mainly with constant voltage and constant current transformers, single and polyphase alternators, synchronous motors, rotary converters, induc-

tion and single phase commutating motors, transmission line, etc. The work does not consist only of factory tests, but is designed to lead the student to apply theory to practice as illustrated in the apparatus under test, with a view to an exact understanding of methods and an appreciation of limitations under many conditions. Free use is made of the oscillograph as a necessary device for "seeing" conditions under investigation. The best commercial measuring instruments are available to assist toward accurate work.

POWER.

Required in Department 2, Year IV.

Under this name a number of operating experiments are arranged to afford mining students some familiarity with measuring instruments, direct and alternating current machinery.

GEOLOGY.

ECONOMIC GEOLOGY.

Required in Department 2, Year III.

Laboratory work on ores, manner of occurrence, vein structure, etc. Geological maps of typical mining regions.

GEOLOGICAL EXCURSIONS.

Required in Department 2, Year IV.

Trips to points of interest in the vicinity of Toronto.

MECHANICS.

HYDRAULICS.

Required in Departments 1, 2, 3 and 7, Year III.

The work in this course is intended to illustrate the lecture course given in hydraulics and to give the student some working acquaintance with the formulæ and coefficients met with in practice. Experiments are made on the co-efficients of velocity and discharge for orifices of different shapes and sizes, and for weirs. The coefficients obtained are used with orifices and weirs in measuring the discharge through meters, nozzles, etc., which are next under examination. Experiments on the friction of water in pipes and fire hose and in elbows and bends are also made, and the friction factors and coefficients of friction are determined.

Hydraulics.

Optional in Departments 1, 3 and 7, Year IV.

The time spent in the laboratory in the fourth year is devoted to experimental work on turbines of various types and centrifgual and turbine pumps and other similar devices. This experimental work is arranged to illustrate the lectures on turbine and pump design. The experiments are made on two large turbine pumps used in the laboratory supply, as well as on apparatus specially designed for instruction.

Machine Design.

Required in Departments 3 and 7, Year III.

This course is intended to illustrate the lecture course in the subject. The student makes, in the drafting room, under instruction, original designs of various machine parts, or of complete machines of a simple nature.

Machine Design.

Required in Department 3, Year IV.

This course is similar to that required in Year III, but the work done is of more advanced nature.

Strength and Elasticity of Materials.

Required in Departments 1 and 4, Year III.

This course is intended to give the student in Civil Engineering an introduction to the experimental study of the strength and elasticity of materials which is continued at much greater length during the fourth year. It is intended that he shall acquire some familiarity with the construction and operation of testing machines and with the properties of the ordinary building materials.

Strength and Elasticity of Materials.

Required in Departments 3 and 7, Year III.

This course is similar in most respects to the course required in Department 1, Year III, but more attention is paid to the investigation of the properties of the materials of special interest to Mechanical Engineers.

Strength and Elasticity of Materials.

Optional in Year IV.

This course of experiments is intended to give the student practice in investigating the elastic and physical properties of irons, steels, timber, concrete and other building materials.

Reference book:—Materials of Construction—Johnson.

Thermodynamics (including Mechanical Laboratory).

Required in Departments 3 and 7, Year III.

This laboratory course is designed to assist in a clearer understanding of thermodynamics, machine design and mechanics of machinery. The work in thermodynamics consists in the setting of slide valves, indicating engines, measuring the brake horse power, simple engine and boiler tests and the testing of gas and gasoline engines under various conditions. The mechanical laboratory work deals with the efficiency of belts and ropes as well as of several machines of simple construction. An examination of lubricating oils is also made by means of oil testing machines and other well-known devices. Experiments are also made on the balancing of reciprocating and rotating masses.

Thermodynamics.

Optional in Departments 3 and 7, Year IV.

The work in this year is a continuation and extension of the work covered in the third year laboratory course. Careful tests are made of engines of various types such as simple, tandem, and cross-compound steam engines; steam turbines; refrigerating machines; air engine; injectors and steam pumps, etc.; and an application is made of Hirn's Analysis and the entropy diagram to the results obtained. A complete set of experiments is made on each machine and the results plotted so as to show clearly to the student the effect of various alterations in the adjustment of the engine on the resulting efficiency.

Several modern gas and gasoline engines and a gas producer give ample opportunity for the study of this type of engine, and facilities are provided for sampling the gas supply and exhaust.

Two experimental stacks and three boilers enable results to be obtained on boiler efficiency and chimney draft.

MINERALOGY.

Mineralogy.

Required in Department 5, Year I; 3 hours per week; both terms.

Introduction to blow-pipe analysis, determination of minerals by inspection and physical tests.

Text books:—Text book of Mineralogy—Dana; Mineral Tables—Eakle; Determinative Mineralogy and Blow-Pipe Analysis—Brush-Penfield.

Mineralogy.

Required in Department 5, Year II; 2 hours per week; first term.

Determination of minerals by means of the blow-pipe and physical properties.

Text book:—Determinative Mineralogy and Blow-Pipe Analysis—Brush-Penfield.

Mineralogy.

Required in Department 2, Year II; 1 hour per week; first term; 3 hours a week; second term. Determination of minerals by inspection and by means of physical tests; introduction to blow-pipe practice.

Text books:—Mineral Tables—Eakle; Determinative Mineralogy and Blow-Pipe Analysis—Brush-Penfield.

Mineralogy.

Required in Department 1, Year II; 1 hour per week; first term; 3 hours a week, second term. Determination of minerals by inspection and by means of physical tests; study of common rock types and their identification.

Text books:—Mineral Tables—Eakle; Handbook of Rocks—Kemp.

Mineralogy.

Required in Department 2, Year III. Determination of minerals by means of the blow-pipe and physical properties.

Text books:—Mineral Tables—Eakle; Determinative Mineralogy and Blow-Pipe Analysis—Brush-Penfield.

Petrography:—Required in Department 2, Year IV. Study of the chief rock-forming minerals, of rocks in thin sections and in hand specimens.

Text books:—Rocks and Rock Minerals—Pirsson; Minerals in Rock Sections—Luquer.

MINING, METALLURGY AND ORE DRESSING.

MINING AND ORE DRESSING.

Required in Department 2, Year II; 3 hours per week; one term.

Introductory work with rock-drills and various ore dressing appliances.

MINING AND ORE DRESSING.

Required in Department 2, Year III.

Continuation of work of Year II. Experimental work to determine falling ratios, magnetic permeability of minerals, etc., sampling of mill products and ore in place.

MILLING.

Required in Department 2, Year IV.

Advanced work with ore dressing appliances, complete mill tests.

METALLURGY.

Required in Department 2, Year IV.

Experiments in the pyro-metallurgy of copper and lead. refining of base bullion, cyanide tests.

PHYSICS.

ACOUSTICS.

Required in Department 4, Year III.

Wave motion in general, laws of vibrating strings and organ pipes, velocity of sound, Melde's and Lissajous' experiments, testing absorption and reverberation.

HEAT.

Required in Departments 1, 3, 4 and 7, Year III.

Calibration of thermometers, determination of latent and specific heat, verification of gas laws, coefficients of expansion, mechanical equivalent, etc.

HYDROSTATICS.

Required in Departments 1, 2, 3, 4, 5, 6 and 7, Year II; 1½ hours per week; second term.

Experiments on determination of specific gravity of solids and fluids. Determination of pressure, etc.

OPTICS.

Required in Departments 1, 3, 4, 5, 6 and 7, Year II; 1½ hours per week; first term.

Reflection and refraction, optical constants of lenses and mirrors, theory of optical instruments.

Photograghy.

Required in Departments 1, 4, 5 and 6, Year III.

Making of negatives from the round and from the flat. Preparing negatives for printing. Printing for various purposes. Blue printing. Mounting.

RAILWAY ENGINEERING.

Field Work.

Optional in Year IV.

During the first term an original survey for a railroad some one or two miles in length will be made, the work to be conducted according to the most modern methods of location. Upon the completion of this work, a contour map of the district surveyed will be plotted in the drafting room and a line adjusted to it. This will be staked out in the field, profiles taken and complete estimates of the cost of construction made.

SURVEYING.

Field Work.

Required in Departments 1, 2, and 4, Year I; 9 hours per week; first term.

This course comprises—testing chains; practice in chaining; a complete survey of a piece of land with the chain; keeping of field notes; the use of the compass and transit in surveying closed figures and traverse lines and in ranging straight lines; plotting by latitudes and departures and otherwise; computing areas.

Field Work.

Required in Departments 1 and 2, Year II; 9 hours per week; first term.

(A) This course of instruction embraces all adjustments of the transit, accurate determination of angles of closed figure, minor problems in triangulation—ordinary and special problems as applied to railroad work in regard to curves, simple, reverse and compound, profile levelling and plotting of profile.

Field Work.

Required in Department 4, Year II; 9 hours per week; first term.

(B) This course includes adjustment of the levels, accurate differential levelling, profile levelling and plotting of same. Cross sectioning and computation of earthwork, adjustment of transit and its use in laying out curves, simple, reverse, etc.

FIELD WORK.

Required in Departments 1 and 2, Year III.

This includes adjustments of levels and accurate check differential levelling, determination of profile, cross sectioning and computation of earthworth of located line on ground and plotting of same. Also cross sectioning by use of hand level. A complete stadia topographic survey is made and plotted. The spiralling of curves on track already laid down and practical methods of locating and placing sidings and switches.

OUTLINE OF VACATION WORK.

Construction Notes.

Required in Years II and III.

The construction notes required consist of neat and complete dimensioned sketches in pencil of any structures, machines or plant which may be of interest. Any object chosen should be represented and dimensioned in such a manner that it could be completely constructed from the notes as the only available information.

From students in Department 2, who have been actually engaged during the summer with Government or other approved geological survey parties, geological field notes will be accepted in lieu of construction notes.

PROFESSIONAL DEGREES.

The attention of graduates is directed to the following regulations respecting professional degrees.

The following degrees have been established: Civil Engineer(C.E.), Mining Engineer (M.E.), Mechanical Engineer (M.E.), Electrical Engineer (E.E.), Chemical Engineer (Chem.E.), subject to the following regulations:—.

1. A candidate for one of the said degrees shall hold the diploma of the School of Practical Science or of the Faculty of Applied Science and Engineering and the degree of Bachelor of Applied Science except in the case provided for in clause 11 hereunder.

2 He shall have spent at least three years after receiving the degree of Bachelor of Applied Science in the actual practice of the branch of engineering wherein he is a candidate for a degree.

3 Intervals of non-employment or of employment in other branches of engineering shall not be included in the above three years. It shall not be necessary that the several periods requisite to make up the said three years be consecutive.

4 Satisfactory evidence shall be submitted to the University examiners as to the nature and length of the candidate's professional experience for the purpose of clauses 2 and 3.

The Examiners shall satisfy themselves by oral or written examinations in regard to the candidate's experience and competence.

5. The candidate shall prepare an original thesis on some engineering subject in the branch in which he wishes a degree; the said thesis to be accompanied by all necessary descriptions, details, drawings, bills of quantities, specifications and estimates.

The candidate may be required at the option of the Examiners to undergo an examination in the subject of this thesis

6. Notice in writing shall be sent to the Secretary not later than the first day of February, informing him of the degree to which the candidate wishes to proceed and of the title of his proposed thesis for the approval of the Examiners.

7. The evidence under clause 4, and the thesis, with accompanying papers, described in clause 5, shall be sent to the Secretary not later than the first day of April.

8. The candidate shall be required to present himself for examination in the month of April at such time as may be arranged by the Examiners.

9. The fee for any one of the said degrees shall be twenty dollars, and shall be paid to the Bursar not later than the first day of April.

10. The thesis, drawings, and other papers submitted under clause 7 shall become the property of the University.

11. Candidates who graduated from the School of Practical Science before June, 1895, shall not be required to hold the degree of Bachelor of Applied Science.

EXTRACTS FROM ACTS.

From the Ontario Act Respecting Land Surveyors and Survey of Lands (R.S.O.).

"26. Any person serving as an apprentice as hereinbefore provided, may, with the permission of the Board of Examiners, attend the Ontario School of Practical Science, or any school, college or university, the course of study in which is, in the opinion of the Board, sufficiently similar to that in the Ontario School of Practical Science, for the purpose of taking any course of study which includes any subjects required for the final examination for admission to practice as a land surveyor, but the total period of such apprenticeship and of such course of study shall not exceed the period of four years from the date of the articles of apprenticeship as above mentioned, and not less than three years of the said period of four years shall be passed in the actual service of a practising Ontario Land Surveyor.

* * * * * * *

"28. The privilege of a shortened term of apprenticeship shall also be accorded to any graduate of the Royal Military College at Kingston or of the Ontario School of Practical Science in civil engineering or in mining engineering, or of the McGill College, Montreal, in civil engineering or in mining engineering, and such person shall not be required to pass the preliminary examination hereinbefore required for admission to apprenticeship with a land surveyor, but shall only be required to serve under articles with a practising land surveyor duly filed as required by section 32 of this Act, during twelve successive months of actual practice, after which, on complying with all the other requirements, he may undergo the examination prescribed by this Act.

"29. Such person at any time during his apprenticeship may, with the permission of the Board of Examiners, attend the Ontario School of Practical Science, or any school, college or university, the course of study in which is, in the opinion of the Board, sufficiently similar to that in the Ontario School of Practical Science, for the purpose of taking any course of study which includes any subject required for the final examination for admission to practice as a land surveyor, but the total period of such apprenticeship, and of such course of study, shall not exceed the period of two years from the date of the articles of apprenticeship as above mentioned, and not less than twelve months of the said period of two years shall be passed in the actual service of a practising Ontario Land Surveyor."

From Act Respecting Manitoba Land Surveyors.

"28. (1) The privilege of a shortened term of apprenticeship shall be accorded to graduates of the Royal Military College of Canada and to graduates in civil engineering of the University of McGill College of Montreal, the School of Practical Science of Toronto, the School of Mining at Kingston, and graduates of Manitoba University who have taken first or second class honours in the special course in mathematics; and such graduates shall not be required to pass the preliminary examination hereinbefore prescribed for admission to apprenticeship with a land surveyor, but shall only be required to serve under articles with a practising land surveyor, duly filed as required by section 24 of this Act, during twelve successive months of actual practice, of which at least six months shall be actual practice in the field, after which, on complying with the other requirements of this Act, he may undergo the examination for commission to practice prescribed by this Act."

From British Columbia Land Surveyors' Act, 1905.

"52. Whosoever shall have followed, during at least two years, a regular course of studies in all the branches of the sciences required by law in order to be received as a land surveyor; who has attended the lectures of a British university or college where a complete course of theoretical and practical instruction is given in civil engineering, physics, and all other branches of sciences required by law in order to be admitted as a land surveyor, and who has received from such university or college, after a regular examination, his diploma or degree as a civil engineer or land surveyor, on satisfying the Board that he is duly qualified as aforesaid, may, without undergoing the examination for admission to the study of land surveying, be received as a student by any member of the Corporation practising in this Province, and shall be bound to perform only twelve months' actual service in the field as such; or, if he has obtained his degree or diploma as a civil engineer or land surveyor in less than two full years, then only such time of service which, added to the time he has devoted to his course of studies, shall complete the period of three full years; and, at the expiration of the said active service, such person, on complying with the other provisions of this section, shall have the right to present himself and undergo the examination required by law, and, if qualified, to be admitted to practise as a land surveyor for the Province as if he had served his three full years under his indentures with a practising land surveyor; but instead of paying fifty dollars he shall be obliged to pay sixty dollars as fees for his examination and commission as land surveyor."

The above section is to be taken collectively as a whole, no separate clause or sentence can be applied to any particular case.

From the Dominion Lands Act, 1908.

"Every graduate in surveying of the Royal Military College of Canada, and every person who has followed a regular course of study in all the branches of education required by this Act for admission as a Dominion land surveyor, for at least two years, in any college or university where a complete course of theoretical and practical instruction in surveying is organized, and who, after examination, has thereupon received from such college or university a diploma or certificate, shall be exempt from serving three years as aforesaid, and shall be entitled to examination for a commission after being admitted upon examination as aforesaid as an articled pupil and serving one year under articles with a

Dominion land surveyor, including six months' actual practice with him in the field, on producing an affidavit from the said surveyor in said form C, together with his own affidavit in said form D, that he has served for one year as herein provided; but it shall rest with the Board to decide whether the course of instruction in such college or university meets the requirements of this section.

From the Ontario Architects' Act.

"Any student who has matriculated in Arts in any University in His Majesty's dominions, or in the Ontario School of Practical Science, shall not be required to pass the preliminary examinations.

"23. Any person who applies for admission to registration as an architect after the coming into force of this Act, shall be not less than twenty-one years of age, shall have served as a student not less than five years with a principal or principals entitled to register under this Act, or with any other principal or principals approved by the Council, and have passed such qualifying examinations as may be required by this Act.

"24. (3) Any person who has graduated from the Ontario School of Practical Science shall be required to serve only three years as a student, one of which three years may be served during the vacation of such school.

"(4) Upon and after the passing of this Act, students shall serve such term as is required to be served by the provisions of this Act, under indenture to be a registered architect, which indenture and any assignment thereof with affidavit of execution thereto attached shall be filed with the Registrar upon payment of such fees as the Council may by regulation direct.

LABORATORY EQUIPMENTS.

THERMODYNAMIC AND MECHANICAL LABORATORY.

The University has just completed the erection of a large, well-equipped building for the accommodation of the steam, gas, mechanical and hydraulic laboratories, these laboratories being used for the first time during the present session. A more complete description of the laboratories has been published elsewhere so that the present description is only intended to give the main features.

The part of the building set apart for thermodynamics and other mechanical work is the ground floor of a room 60 ft. x 155 ft. This room is lighted entirely from the roof in a very perfect way. A part of the space 40 ft. wide running the entire length of 155 feet is served by a 3-ton travelling crane and contains the following equipment:

50 h.p. Brown engine with separate jackets on both heads and barrel of cylinder.

Two-stage Rand air compressor having compound steam cylinders, each fitted with Meyer cut-off gear. The low pressure air cylinder has Corliss inlet gear.

30 h.p. high-speed Leonard tandem compound engine with shaft governor.

15 h.p. high speed McEwen engine.

75 h.p. two line compound Willans engine.

15 h.p. DeLaval turbine with special nozzles for condensing and non-condensing tests.

Two 15 h.p. Leonard engines with different types of valves, which are used for valve setting. There are also two surface condensers with air pumps so arranged that any engine in the laboratory may be made to exhaust into the atmosphere through an open heater or into one of the condensers, the change from one arrangement to the other being accomplished in a few minutes without the aid of valves.

The laboratory further contains

3-ton York refrigerating machine with tanks.

Ansler transmission dynamometer.

Apparatus for testing injectors and steam pumps.

Numerous other pieces of apparatus and instruments.

The work on internal combustion engines and producers is performed on the following:—

18 h.p. Canada suction gas producer.

14 h.p. National gas engine arranged for various compressions and points of ignition.

10 h.p. Fielding and Platt engine for city gas or coal oil, having various adjustments.

8 h.p. Otto gas engine.

6 h.p. marine gasoline engine.

Ericsson air engine.

Various accessories to above machines.

Steam for the laboratory is supplied by two 50 h.p. and one 100 h.p. Babcock and Wilcox boilers, the latter having an internal superheater. These boilers are located in a separate boiler room. They are used for experimental work only and are fitted up for testing. The gases pass up through two independent chimneys and these have been arranged so that the draft and other conditions in the chimney at any point of its height may be examined.

In smaller work rooms off the main laboratory are placed belt and oil testing machines, apparatus for testing the efficiency of gears and machines, and for experiments in the balancing of machinery.

HYDRAULIC LABORATORY.

The hydraulic laboratory occupies two floors each 40 feet x 112 feet, which are well lighted by large windows on the side and end.

The water for the experimental work is pumped through the various pieces of apparatus from a well by means of two turbine pumping units both of which are driven by a Belliss and Morcom compound engine of 125 h.p. running at a speed of 525 revs. per minute. Both engine and pumps have been installed with a view to using them in experimental work as well as for supply of water for the other apparatus used in the laboratory.

The pumping units are capable of delivering one cubic foot of water per second against heads of 250 feet and 300 feet respectively. These units are designed and connected up so that they may be run in series giving the above discharge at 550 feet head or they may be run in parallel giving double the discharge at a

lower head. Each pumping unit consists of two two-stage pumps mounted on a common base and driven by a single pulley and the construction and piping are such that each two-stage pump may be driven separately or that all may be driven, discharging separately one cubic foot per second at about 125 feet head through each of four independent pipes, or else the pumps may be run in series or in parallel. The scheme is thus well adapted to laboratory work and under the heads used on reaction turbines over six cubic feet per second may be obtained.

The laboratory further contains a large vertical steel tank 5½ feet diameter by 34 feet high with arrangements for the attachment of nozzles and other mouth pieces, etc. Connections are also arranged for reaction turbines, the tank acting as a reservoir.

The discharge from the turbines or nozzles is measured in a weir tank nearly 6 feet wide and 21 feet long containing a contracted weir 4½ feet wide. This weir may be calibrated by two weighing tanks each having a capacity of about 240 cubic feet.

There are three reaction turbines and two impulse wheels all ready for experiment, the power being measured by brakes and the water by weir or orifices. Amongst the reaction turbines may be mentioned the one designed and built by Escher Wyss and Co., specially for the laboratory.

Smaller orifice and weir tanks each about 3 x 3 x 12 feet with necessary measuring tanks are arranged for instruction in coefficients of various kinds and practice with weirs and orifices.

A Venturi meter and other meters, also hydraulic rams and similar devices are available for testing, and good facilities have been arranged for investigating friction and other properties of pipes and fire hose.

For special investigations on turbine and centrifugal pumps, other pumps in addition to those already described have been arranged.

The basement of the laboratory contains an open trough 5 feet wide about 110 feet long with a large weir at one end. It is intended to use this trough for experiments on the flow in open channels, for measurements of large discharges by means of the weir, and for experiments with current meters and Pitot tubes.

Numerous pieces of smaller apparatus together with all instruments required have also been provided, and the laboratory equipment is believed to be very complete.

DONATIONS TO THE THERMODYNAMIC AND HYDRAULIC LABORATORIES.

The following donations to the equipment of the laboratories have been made through the kindness of those mentioned.

50 h.p. Wheeler Surface Condenser, presented by Mr. F. M. Wheeler, New York.

Blake Feed Pump, presented by the manufacturers.

6 inch New American Turbine, presented by Wm. Kennedy & Sons, Owen Sound, Ont.

Two Crown Water Meters, presented by the National Meter Co., New York, through Mr. M. Warnock, Toronto.

Rock Drill presented by Sullivan Machinery Co., New York, through Mr. A. E. Blackwood, '95.

Marine Gasoline Engine, presented by Canadian Fairbanks Co., Montreal.

Two engines with different types of valve, presented by Messrs. E. Leonard & Sons, London, Ont.

In addition to the above, other firms have materially assisted by offering apparatus at cost price, among whom may be specially mentioned, The Canadian Rand Drill Co., Sherbrooke, Quebec.

PHYSICAL LABORATORIES.

The optical laboratory is equipped with Weinhold optical benches and accessories for determining the constants of mirrors and lenses and for demonstrating the construction and use of telescopes, mirrors, field glasses, microscopes, etc. There is also a full equipment of optical instruments including telescopes, microscopes, field glasses, comparators, spectrometers, saccharimeters, level tester, photometer, focometer, dynameter, cathetometer, polariscope, projecting lanterns, etc.

The photographic laboratory is supplied with several cameras for viewing, copying, enlargement and reduction, a spectroscopic camera and an electric blue printing machine and the necessary dark rooms.

The hydrostatic laboratory contains a supply of various forms of hydrometers, hydrostatic balancers, Jolly balance, Mohr's balance, hydrostatic press, vacuum pumps, gauges, etc.

The heat laboratory is equipped with a full supply of calorimeters and accessories for determinations of latent and specific heat. There is also a steam boiler, and jacketed tubes for determinations of the expansion of metal rods, air thermometer, apparatus for verification of Boyle's law and pressure and boiling

point curve and for determination of the absolute expansion of mercury. Callendar's apparatus for determination of the mechanical equivalent of heat.

The acoustical laboratory is provided with sonometer, siren, forks ordinary and electric, Lissajous' and Melde's apparatus, organ pipes of various forms, manometric flame apparatus and a special equipment for work in architectural acoustics consisting of torsion chronograph, electro-pneumatic wind chest and standardized organ pipes and other accessories.

STRENGTH OF MATERIALS LABORATORY.

This laboratory is intended for the scientific and commercial testing of the materials of construction such as iron, steel, timber, concrete and masonry.

It is supplied with the following:

An Emery 50-ton hydraulic machine, built by Wm. Sellers & Co., of Philadelphia, for making tests in tension and compression.

A 100-ton screw power machine, built by Riehle Bros., Philadelphia. It is designed for making tests in tension, compression, shearing and cross-breaking and will take in posts 12 feet long and beams up to 18 feet in length.

A Riehle 10-ton screw power universal testing machine.

A Riehle 50-ton screw power universal testing machine.

A 15-ton single-lever machine, built by J. Buckton & Co., Leeds, England.

A torsion machine, built by Tinius Olsen & Co., Philadelphia, for testing the strength and elasticity of shafting. This machine will twist shafts up to 16 feet in length and 2 inches in diameter.

A Riehle transverse testing machine of 5,000 pounds capacity, adapted to specimens up to 48 inches in length.

A Riehle compressometer, with spherical seat attachment for the adjustment of specimens having slightly non-parallel faces. This compressometer will receive specimens up to 10 inches in length.

A 20,000 pound Olsen, hand power, wire testing machine, especially fitted for testing wooden columns with both fixed and pivoted ends.

A Riehle abrasion cylinder, built to the standard required by the National Brick Makers' Association, adopted in 1901.

A large number of extensometers of the usual degree of precision. These include the Bauschinger, Martens, Unwin, Marshall,

Riehle, Johnson, Henning (recording) and other types. In addition there are the usual scales, micrometers, telescopes and reflectors, voltmeters for the determination of metallic contract, and such other appliances as are necessary in the making of precise measurements.

The shop is equipped with a number of high-class machine tools specially fitted for reducing the specimens to the requisite shapes and dimensions with a minimum of hand labour. It is also supplied with the necessary appliances for making ordinary repairs and for making apparatus for special experiment and original investigation.

CEMENT TESTING LABORATORY.

This laboratory is fitted with all the ordinary moulds, sieves, balances, burettes, steaming and drying tanks, tables and other appliances necessary in making the usual physical tests of a Portland cement. In addition there are the following:—

A Riehle 2,000 lb. machine, fitted for either tension or compression.

A 2,000 lb. Riehle shot machine for tension.

A 2,000 lb. Fairbank's shot machine for tension.

A 1,000 lb. Olsen automatic shot machine fitted for tests in either tension or cross-breaking.

An extra large Faija's hot bath apparatus.

METROLOGICAL LABORATORY.

The department of surveying and geodesy is provided with all the ordinary field instruments, such as transits, levels, compasses, micrometers, sextants, planimeters, plane tables, tapes, chains, etc., with which is carried on the instruction in practical field operations as detailed elsewhere.

A small laboratory is also established containing the necessary instruments for the refined measurements of geodetic surveying; as, a standard yard and metre, a Rogers 10 foot comparator, a Kater's pendulum with vacuum chamber, a level trier, micrometer, microscopes, etc.

There is also a goedetic observatory in connection with this department in which students of the fourth year are instructed in, taking observations for time, latitude, longitude, and azimuth by the precise methods used in connection with a goedetic survey. It contains a 10 inch theodolite and zenith telescope by Troughton & Simms; an astronomical transit instrument and an 8 inch theodolite by Cooke; an electro-chronograph; a Howard astronomical clock; a Dent sidereal break-circuit chronometer; airthmometers, etc.

ELECTRICAL LABORATORIES.

Galvanometer laboratory:—This laboratory is equipped with numerous galvanometers, resistance boxes, bridges, potentiometers, standard resistances, standard cells, etc., and much other usual and special apparatus for varied electrical experiments of the more delicate variety.

This laboratory also contains apparatus for studying the various types of arc and incandescent lamps.

Another room is fitted more especially for calibration of electrical instruments for alternating and direct currents. About one hundred and twenty portable measuring instruments are available for students' use, also standard instruments, including Weston laboratory standards, Kelvin balances, etc., with which the portable instruments may be compared.

Machine Laboratory:—This laboratory contains twenty-five dynamos and motors varying in capacity from two to twenty kilowatts, adapted for experiments illustrating the properties of compound, shunt and series dynamos and motors, arc machines, etc. Switch-boards, numerous rheostats, lamp racks, starting boxes, circuit breakers, flexible cables, brakes, torsion dynamometers, tachometers, etc., are available for use with the machines. The students are supplied with the best standard portable ammeters and voltmeters obtainable.

This laboratory also contains two 15 kw., 25 cycle and two special 15 kw., 60 cycle General Electric polyphase revolving field alternators direct driven by motors, two rotary converters of 10 kw. and 5 kw. capacity, a 7½ kw. General Electric polyphase induction motor with slip ring rotor, Westinghouse three phase squirrel cage induction motors, Wagner single phase motor, Westinghouse single phase series motor, Westinghouse alternator, and several three phase and single phase induction motors; also transformers, reactive coils, and other details as in the direct current section of the laboratory described above for experiments on the properties of alternating currents and alternating current apparatus in general. A constant-current transformer with its load of six series arc lamps, three oscillographs for studying wave forms, a high potential transformer and a mercury arc rectifier may also be mentioned. The students are supplied with Weston, Westinghouse and Thomson portable instruments for measuring purposes.

Magnetic Laboratory:—A room is fitted with appliances for the study of saturation and hysteretic properties of samples of iron and steel. The room also serves for exercise in winding models of direct current armatures, alternators, etc.

CHEMICAL LABORATORIES.

The Chemical laboratories are situated in the western half of the Chemistry and Mining building, on the first and second floors. The rooms are large and well lighted, and are supplied with the usual modern equipment.

The first and second year laboratory for qualitative work has accommodation for 112 students, each working space being supplied with water, gas and fume cupboard. The laboratory for quantitative analysis will accommodate 48 students, and is supplied with commodious fume cupboards and all necessary apparatus. A laboratory with working places for 36 is provided for the students engaged in the study of technical chemistry; it is equipped with appliances for the preparation and testing of chemical products. Each of these laboratories has its own balance room adjoining, furnished with instruments from the best makers and adapted to the particular objects in view.

In addition there are rooms set apart for gas analysis, electrolytic analysis, calorimetry, and a specially constructed fireproof laboratory for combustion, crucible and bomb furnaces. Each of these laboratories is supplied with apparatus of the most approved design, providing excellent facilities for the prosecution of work in analytical and technical chemistry.

ELECTROCHEMICAL LABORATORIES.

The Electrochemical laboratories which are situated in the Chemistry and Mining building are provided with special facilities for electrolytic work, including a large storage battery and electroplating dynamo with tanks as well as a complete set of apparatus and electrical measuring instruments. The experimental work on electric furnaces is performed in two rooms specially equipped for this purpose with rheostats and switchboard connections to a 120 kw. D. C. generator, which supplies the current required.

GEOLOGICAL AND MINERALOGICAL LABORATORIES.

In the Chemistry and Mining building on College Street the University possesses a modern laboratory for Geology and Mineralogy.

Brief courses are given in laboratory work, especially in personal examination of type sets of rocks, fossils, minerals and crystal models. These laboratory exercises serve to illustrate the introductory didactic instruction.

For the encouragement of pure crystallography the laboratories are supplied with goniometers of the various types, crystal models, appliances for the cutting of oriental crystal sections and for the physical examination of the same. Practical Petrography is carried on in rooms provided with type sets of rocks, both macroscopic and microscopic. Advanced students are taught to make thin sections of rocks and fossils and to study them microscopically. Students in Palæontology are given instruction in the preparation of material for study and are afforded an opportunity of examining type series of specimens.

The laboratory for the preparation of thin sections of rocks, minerals and fossils is provided with electric diamond saws and grinding appliances for the various types of work incidental to the preparation of thin sections and museum material.

A room is also provided for advanced work in Cartography and Geological Surveying.

The departments possess 28 petrological microscopes and 5 of other types so that it is now possible to provide advanced students with instruments and sets of thin sections for their own especial use. The blowpipe laboratory contains 156 lockers, especially designed for apparatus for students.

ASSAYING LABORATORIES.

Two assaying laboratories are situated in the basement of the Chemistry and Mining building, one has a floor space of 17 feet x 47 feet, and the other 28 feet x 37 feet. Adjoining each is a room 15 feet x 11 feet, with the necessary equpiment for the wet work in connection with assaying. Common to both laboratories is a balance room furnished with gold balances set on a concrete pier. Each of the laboratories contains a number of melting holes (13 in all) for crucible fusions, various gas furnaces both for crucibles and muffles, and a large brick muffle furnace.

The furniture comprises lockers for the students, tables for the pulp balances and the necessary cabinets and shelving.

Adjoining the assay laboratories is a preparation room (19 feet x 13 feet) which is equipped with a motor, crusher, pulverizer, sample grinder and all the necessary hand pulverizers, screens, etc., for preparing ores for assay.

The metallurgical room is 40 feet x 21 feet and is equipped at present with a reverberatory furnace for roasting sulphide and arsenical ores, fume cupboard, lockers, tables, etc., and is intended for hydro-metallurgical work.

MILLING AND CONCENTRATING PLANT.

A detached building 72 feet x 70 feet in area, contains the milling and concentrating equipment. It is heated, lighted and supplied with power from the main building, and is divided into two parts. The greater part, with 72 feet x 53 feet floor space, and 22 feet high, contains the milling and concentrating equipment. The machinery for the former operations consists of a five-stamp battery erected on concrete foundation, Challenge ore feeder, amalgamating plates, Wilfley table for concentration, a clean up pan, steel settling tanks, a steel tank suspended from the roof girders to furnish a constant supply of water, and a track with travelling crawl to transport ore. This is driven by a 15 horse power motor.

The concentrating part consists of a set of five revolving trommels for wet screening, four three-compartment jigs, a trough classifer delivering three products, and two revolving buddles, Wilfley Slimer, Deister Slimer, Richard's Pulsating Classifier, Richard's Pulsating Jig, besides experimental apparatus of various kinds for experimenting on the falling rates of ore particles, the settling of slimes, surface tension action in grease and flotation methods, etc. The waste products run to the same settling tanks as the tailings from the stamp battery. The ore is handled by a travelling crawl. All the machinery in this part is driven by a 10 horse power motor.

The plant throughout is intended mainly for experimental purposes and is made of such a size that numerous experiments can be carried out on small quantities of ore. Tests can also be made on lots of one or two tons.

The other part of the milling building, with 72 feet x 17 feet floor space and 15 feet high, is divided into four separate rooms. The largest of the four rooms has an area of 476 square feet and is devoted to the crushing and pulverizing of the ores preparatory to their treatment in the milling and concentrating room. It is isolated in order to confine the dusty operations as far as possible to this one room, and is equipped with a gyrating crusher of Hadfield's make, a set of Hamilton rolls 16 inches by 12 inches, platform scales for weighing ore, a jib crane, pulleys, buckets, etc., for handling the rock. An adjoining room contains a 30 h.p. motor for driving the machinery of the crushing department, and storage bins for ore, work bench, etc. Another room with 17 feet x 15 feet floor space, is furnished with a magnetic separator of the Rowan-Wetherill make, driven by its own motor.

One room of the same size as the above remains available for future additions.

ORE DRESSING AND ASSAY LABORATORIES.

The Coniagas Mines Ltd., through the General Manager, Mr. R. W. Leonard, has supplied the Mill Building with a full-sized Wilfley Slimer free of cost.

The Deister Concentrator Co. of Fort Wayne, Indiana, have supplied free of cost one of their latest models of Slime Tables.

The Denver Engineering Works of Denver, Colorado, have supplied at below cost of manufacture one Richard's Pulsating Jig and one Richard's Pulsating Classifier.

F. W. Braun of Los Angeles, California, and H. E. T. Haultain, have jointly presented to the Assay Laboratory two Electrolytic Assaying Cabinets.

MUSEUM.

The Geological and Mineralogical Museum of the University is open to students of the Faculty of Applied Science, and is also accessible to the general public from 2 to 5 p.m. throughout the year.

The Museum is situated in the south-east corner of the ground floor of the Chemistry and Mining building, and may be entered from the door at that corner of the building.

The southern half of the room is occupied by the cases of the palæontological collection in which are arranged a large series of fossils. These specimens are placed so as to display together the great groups of animals, while the minor divisions are based on stratigraphical grounds. Particularly worthy of note are the fine series of Crinoids and Cystids and the type specimens of Eastern Canada Cambrian fossils. A large part of this collection is due to the generosity of Dr. B. E. Walker and Mr. Wm. Mackenzie. On the walls of the museum are being placed some excellent specimens of large extinct vertebrates.

To the north of the fossil collection is the Ferrier Cabinet of Minerals containing good examples of nearly all the minerals known to science, as well as a special case with specimens of the various minerals from the Cobalt Mining District.

The northern part of the room is occupied by twenty cases exhibiting all the important rocks both igneous and sedimentary which go to make up the crust of the earth.

Around the walls are placed cases containing the chief economic mineral products arranged in accordance with their practical application to human activities. This collection is particularly rich in specimens from Ontario localities and includes most of the material formerly exhibited in the Engineering building.

LIBRARY.

Rooms have been set apart in the Engineering and the Chemistry and Mining buildings for the housing of such periodicals and other literature of the University Library as is of special interest to the students of this faculty.

SOCIETIES.

THE ENGINEERING SOCIETY OF THE UNIVERSITY OF TORONTO.

Officers for 1910-1911.

President ..... A. D. Campbell.
1st Vice-President ..... R. L. Dobbin.
Vice-Pres. Civil & Archl. Secs. M. H. Murphy.
" *Mechanical & Elec. Secs.* F. H. Downing.
" *Chemistry & Mining Secs.* E. Freeland.
Recording Secretary ..... E. J. Ritchie.
Corresponding Secretary ..... A. H. Munro.
Treasurer ..... W. A. Gordon.
Permanent Secretary ..... H. Irwin.
Curator ..... E. V. Chambers.
Fourth Year Representative ... J. McNiven.
Third Year Representative ..... W. Curtis.
Second Year Representative ... E. Gray.
First Year Representative ..... To be elected.

The Society meets every second Wednesday during the academic year. Papers are read, and discussions are held on engineering subjects. The Society publishes a pamphlet monthly during the academic year, containing the best papers read at the meetings. A supply department is conducted by the Society, on a co-operative plan through which instruments, drafting supplies, stationery, etc., may be purchased at a low cost.

UNIVERSITY OF TORONTO ELECTRICAL CLUB, 1910-1911.

President ..... N. Porter.
Secretary-Treasurer ..... E. A. Thompson.

The Society meets every second Thursday evening during the academic year for the discussion of papers relating to mechanical and electrical engineering problems too technical for consideration in the Engineering Society. The membership is limited to members of the senior and final years.

ATHELTIC ASSOCIATION OF THE FACULTY OF APPLIED SCIENCE.

EXECUTIVE COMMITTEE, 1910-1911.

Honorary President.....Dean Galbraith.
President .....C. E. Richardson.
Vice-President .....R. S. Bell.
Secretary-Treasurer .....To be elected.
Fourth Year Representative...N. J. Harvie.
Third Year Representative.....W. H. Wylie.
Second Year Representative.....F. J. Mulqueen.
First Year Representative.....To be elected.

The Athletic Association has full control over all athletic clubs using the name of the Faculty of Applied Science. The Executive Committee has power to suspend any one from the privileges of membership in the Association for any breach of its regulations, and controls the finances of all athletic clubs in the aforesaid Faculty. The annual membership fee of this Association is fifty cents.

No other moneys are collected for the support of athletics in the Faculty of Applied Science without the sanction of the Executive Committee.

RUGBY FOOTBALL.

The Mulock Cup, which was presented by Sir Wm. Mulock, M.A., LL.D., to the University of Toronto Rugby Football Club for inter-college competition, brings out each year a large number of contestants from the University and affiliated colleges.

RUGBY FOOTBALL CLUB OF THE FACULTY OF APPLIED SCIENCE.

Officers 1910-11.

Honorary President.....T. Loudon.
President .....Hugh C. Ritchie.
Vice-President .....W. C. Foulds.

The Athletic Association is now the paramount body in University athletics, and has entire jurisdiction over the athletic clubs using the University name, and over their finances, members and policy, subject to the University authorities. Henceforth no financial agreement can be entered into by any such club without the sanction of the Directorate. No expenditure of any kind in connection with any such club can be made without the written order of the Secretary-Treasurer of the Directorate.

GYMNASIUM AND ATHLETIC GROUNDS.

"The University gymnasium was completed and equipped in 1893. It is fully provided with the best and most modern appliances for physical culture, and contains a running track, shower baths and swimming bath, besides the necessary dressing rooms and other conveniences. A competent instructor in gymnastics is in constant attendance to superintend and direct the exercises of students. In addition to the lawn in front of the Main University Building and a campus in the rear, a large plot of ground on Devonshire Place has been set apart as an athletic field. By this addition the

facilities for football, cricket, tennis and other out-door athletic sports are doubled, as compared with previous accommodation; and by these grounds, in conjunction with the gymnasium, ample opportunity is afforded to all students for healthful exercise and physical development. To assist in meeting the expenses of the gymnasium, a nominal annual fee is imposed on those who avail themselves of its advantages. The supervision of all athletic matters has been entrusted by the Council to an Athletic Board, consisting of six members appointed from the Faculty and officers of the Athletic Association. All applicants of clubs for the use of grounds must be made annually to this Board. All such applications must be accompanied by a list of officers. In the case of new clubs the list of officers must be accompanied by particulars as to the organization and objects of the club making applica-

STUDENTS' UNION BUILDING.

"In 1894 additions were made to the front of the building in which the gymnasium is situated, consisting of a large hall for public meetings, a reading room and committee rooms. This additional accommodation is available for the work of the various students' societies, and for academic purposes. Applications for the use of rooms. accompanied by a list of officers and a copy of the constitution of the society making application, must be made, through the President, to the joint committee of the Councils on Gymnasium and Students' Union Building, at the beginning of the season, or from time to time as occasion requires. Arrangements have also been made by which recognized societies may obtain the use of committee rooms on application to the janitor of the Students' Union Building."

FACULTY OF APPLIED SCIENCE AND ENGINEERING.

Historical Sketch.

The Legislative Assembly during the Session of 1877 gave its sanction to the establishment of a School of Practice Science on the basis proposed in the memorandum of the Minister of Education confirmed by the Lieutenant-Governor in Council on the 3rd day of February ,1877.

By the scheme thus approved of, Government effected an arrangement with the Council of University College whereby the students of the School of Practical Science enjoyed full advantage of the instruction given by its professors and lecturers in all the departments of science which were embraced in the work of the School.

This arrangement was brought to an end in 1889 by the transfer of the department of science above referred to, from University College to the University of Toronto under the operation of the University Federation Act.

In order that the students of the School might continue to enjoy the advantage of the instruction of the above departments, the Senate of the University of Toronto passed a Statute in October, 1889, affiliating the School to the University, which Statute was confirmed by the Lieutenant-Governor on the 30th day of October, 1889.

By an Order-in-Council, approved by the Lieutenant-Governor, on the 6th day of November, 1889, a Principal was appointed, and the management of the School was entrusted to a council composed of the Principal as chairman, and the Professors, Lecturers and Demonstrators appointed on the Teaching Faculty of the School.

By the terms of this order the management and discipline of the School was vested in the Council.

By a Statute of the Senate of the University of Toronto, passed on December 14th, 1900, the teaching staff and examiners of the School of Practical Science, together with the examiners for the degree of B.A.Sc., and professional degree in Engineering, were constituted ex-officio the Faculty of Applied Science and Engineering of the University of Toronto.

By an Order-in-Council dated the 30th day of January, 1903, the Council of the School was made to consist of the Principal. theProfessors and Lecturers, together with the Registrar.

By the University Act, 1906, the School of Practical Science was united to the University of Toronto as its Faculty of Applied Science and Engineering.

GRADUATING DEPARTMENTS.

There are seven regular Departments of Instruction:—

1. Civil Engineering.
2. Mining Engineering.
3. Mechanical Engineering.
4. Architecture.
5. Analytical and Applied Chemistry.
6. Chemical Engineering.
7. Electrical Engineering.

leading to the degree of Bachelor of Applied Science. The instruction given in these departments extends over a period of four years and is designed to give the student a thorough knowledge of the scientific principles underlying the practice in the several professions, and also such training as may make him immediately useful when he commences professional work.

PROFESSIONAL DEGREES.

Bachelors of Applied Science may, after three years spent in professional work, present themselves for the degrees of Civil Engineer (C.E), Mining Engineer (M.E), Mechanical Engineer (M.E.), Electrical Engineer (E.E.), or Chemical Engineer (Chem.E.), as the case may be, subject to the rules and regulations established by the University. (See page 75).

FELLOWSHIPS.

Sessional Fellowships of the value of $500 each are awarded annually in the various departments.

The Fellows are required to take such portions of the work of instruction as may be assigned to them by the Council.

Applications for these fellowships are to be made annually in writing to the Secretary of the Faculty on or before the 1st day of May.

I. MATRICULATION.

1. The matriculation requirements of this Faculty are based upon those given in the curriculum for Junior Matriculation, a copy of which may be obtained on application .

2. A candidate for matriculation must produce satisfactory certificates of good character.

3. The subjects are as follows:

1911: English, History, Mathematics and any three of the following, viz., Greek, Latin, French, German, Experimental Science. Pass standing in Honour Mathematics will be accepted in lieu of one of these optional subjects.

4. 1912: The same prescription, except that pass standing in Honour Mathematics will be required.

5. The pass standard is forty per cent. of the marks assigned to a paper, with an average of fifty per cent., in 1912 the pass standard will be forty per cent. of the marks assigned to a paper with an average of sixty per cent. the standard for Normal School Entrance.

6. A candidate in 1911 or 1912 who has obtained an average of fifty per cent. or sixty per cent. respectively on all the papers but has failed to obtain forty per cent. in not more than two papers may complete matriculation by passing on these papers at any one subsequent examination.

7. Candidates who obtained, prior to 1910, pass standing in at least a majority of the subjects may complete Junior Matriculation by passing in the remaining subjects at a subsequent examination or examinations.

8. The examination for pass and honour Junior Matriculation is held annually in July at centres in Ontario, and, if application is made to the Senate, the examination may, with the co-operation of the Department of Education, be held at centres outside Ontario.

9. Applications accompanied by the fee of $5.00 must be sent not later than the 24th of May to the local Public School Inspector, or in the case of candidates intending to write at the University, to the Registrar.

10. A Junior Matriculation examination, at which no honour papers are set, will be held in September at the University and at such other centres as may from time to time be authorized. Candidates entitled to the privileges of supplemental examinations as well as new candidates, may present themselves at this examination.

11. Applications to write on the September examination, together with the necessary fee, must be received at the Department of Education not later than September 1, for those who wish to write at any centre established in Ontario, and not later than August 1 for any centre elsewhere in Canada.

12. Forms of application, the time-table of the September examination, and further particulars may be had upon application to the Department of Education.

II. ADMISSION.

A candidate for admission in the session 1912-13 must have completed the seventeenth year of his age on or before the first of October of the year in which he seeks to enter.

Applications for admission must be made on blank forms supplied by the Registrar, and should be forwarded early in September.

Applications will be considered from (*a*) those who have completed matriculation including those who hold certificates recognized as equivalent—see marticulation curriculum—, (*b*) those who have failed in not more than two papers of the matriculation examination. The latter must complete matriculation (See sec. 6, p. 13) before being eligible to enter the second year.

Applications based upon other certificates than those mentioned will be considered as occasion may require. Such certificates must be accompanied by an official statement of the marks in the various subjects upon which the certificate was granted.

ADMISSION AD EUNDEM STATUM.

An undergraduate of another University may be admitted *ad eundem statum* on such conditions as the Senate on the recommendation of the Council of the Faculty may prescribe.

An applicant for admission *ad eundem statum* must submit with his petition (1) a calendar of his University giving a full statement of the courses of instruction; (2) an official certificate of character and academic standing.

III. REGISTRATION.

Registration in the various years will begin Sept. 1st. Blank cards for the purpose will be supplied by the Secretary on request.

IV. FEES.

All fees are payable at the Bursar's office between the hours 10 a.m. and 1 p.m. of each week day except Saturday.

The annual fees including tuition, library, laboratory supplies and one annual examination shall be as follows:—

First Year.

If paid in full on or before November 5th.....$100.
By instalments:
First instalment, if paid on or before November 5th.....50.00
Second instalment, if paid on or before February 5th.....55.00

Second Year.

If paid in full on or before November 5th.....110.00
By instalments:
First instalment, if paid on or before November 5th.....55.00
Second instalment, if paid on or before February 5th 60.00

Third and Fourth Years.

If paid in full on or before November 5th.....120.00
By instalments:
First instalment, if paid on or before November 5th.....60.00
Second instalment, if paid on or before February 5th.....65.00

The above fees are payable in advance. After November 5th a penalty of $1.00 per month will be imposed until the whole amount is paid. In the case of payment by instalments the same rule as to penalty will apply.

Students desiring to pay in instalments must have paid the fees due in the first term before proceeding to the work of the second term.

General Fees.

Matriculation, or registration of Matriculation	$5.00
Supplemental examination	10.00
Admission ad eundem statum	10.00
Degree of B.A.Sc. (Payable not later than April 1st)	10.00

Dues and Deposits.

(Payable to the Secretary of the Faculty at the time of registration.)

Engineering Society membership	$1.00
Annual deposit	2.00

Charges for waste, neglect and breakage are to be met out of the deposit fee, the balance of which will be refunded to the student at the end of the session.

GENERAL INFORMATION FOR STUDENTS.

Discipline.

The Council of University College, and the governing bodies of the federated universities and colleges, respectively, have disciplinary jurisdiction over and entire responsibility for the conduct of their students in respect of all matters arising or occurring in or upon their respective college buildings and grounds, including residences.

The councils of such of the faculties as have assigned for their separate use any building or buildings and grounds, including residences, have disciplinary jurisdiction over and entire responsibility for the conduct of all students in their respective faculties in respect of all matters arising or occuring in or upon such building, or building and grounds.

In all such cases, and, save as aforesaid, as respects all students to whatsoever college or faculty they may belong, disciplinary jurisdiction is vested in the Caput, but the Caput may delegate its authority in any particular case or by any general regulation to the council or other governing body of the university or college or faculty to which the student belongs.

The Caput has also power and authority to determine by general regulation or otherwise, to what college, faculty or other body the control of university associations belongs.

If there be any question as to the proper body to exercise jurisdiction in any matter of discipline which may arise, the same shall be determined by the Caput, whose decision shall be final.

Disciplinary jurisdiction includes the power to impose fines.

REGULATIONS RESPECTING STUDENTS.

No student will be enrolled in any year, or be allowed to continue in attendance, whose presence for any cause is deemed by the Council to be prejudicial to the interests of the University.

All interference on the part of any student with the personal liberty of another, by arresting him, or summoning him to appear before any tribunal of students, or otherwise subjecting him to any indignity or presonal violence, is forbidden by the Council. In particular, students of all Faculties are warned against the practices known as the "hustling" of freshmen and against inter-year or inter-faculty "hustles" Any student convicted of participation in such proceedings will render himself liable to expulsion from the University.

All students shall be in attendance during the whole of each term, unless exempted by special permission of the Council.

Information as to the text books, instruments and materials to be purchased by the students will be given on registration at the beginning of the session.

In exercising the option in languages students must continue in the second year the selection of the first year.

REGULATIONS RESPECTING EXAMINATIONS.

Regular Examinations.

A student who in either term of the session, fails to perform the work of his course in a manner satisfactory to the professors in charge, will not be allowed to present himself at the final examinations of the year except by special permission of the Council.

Candidates are required to send to the Secretary of the Faculty at least three weeks before the commencement of the Annual Examinations in April, notice in writing of their intention to take such examinations. A penalty of $1.00 will be imposed upon all candidates who fail to give notice within the proper time.

No student will be allowed to write at the Annual Examinations who has not paid all fees and dues for which he is liable.

The minimum percentage of marks required to pass in the written examinations will be fixed from time to time by the Council.

The minimum percentage of marks required to pass in the practical work connected with any subject shall be one and one-half times the minimum required in the case of a written examination.

In order to pass the practical examinations in the subjects of applied mechanics, descriptive geometry, electrical design, optics, surveying and architecture, the drawings set in these subjects must be made.

Candidates who fail in passing the Annual Examinations will be required to take again the whole course of instruction, both theoretical and practical, of the year in which they fail before presenting themselves a second time for examination.

Supplemental Examinations.

A candidate who fails in one or two subjects at the annual examinations, will be required to take supplemental examinations in such subjects.

The supplemental written examinations will begin on the 18th of September, 1911.

Candidates are required to send to the Secretary of the Faculty at least two weeks before the commencement of the Supplemental Examinations in September, notice in writing of their intention to take such examinations, and to remit to the Bursar the fee of $10.00.

In the case where a candidate fails to pass a supplemental examination it will count as one of the two supplemental examinations which may be allowed him after the next annual examination.

Vacation Work.

Vacation work must be handed in, on or before the first day of the session.

Vacation notes must be on construction only, except in Department 2 (see p.), and contain not less than twenty, nor more than thirty pages of sketches. These sketches must be free-hand pencil drawings with figured dimensions.

No notes, whether taken during the session or the vacation will be counted unless made in the standard note books of the Faculty.

The minimum percentage of marks required for practical work must be made in the case of vacation notes.

Honours.

Honours will be granted in each department to the students who pass in all the subjects and obtain at least 66 per cent. of the total number of marks allotted to the department at the annual examinations.

Papers read before the Engineering Society may be considered in granting Honours.

REGULATIONS RESPECTING TERM WORK.

Students working in any laboratory must be governed by the regulations relating thereto as made known from time to time.

No laboratory reports or drawings may be removed from the laboratories without permission. The Council reserves the right to dispose of them as may be thought proper.

Field Work.

No field notes will be counted which have not been taken in the field, and during the hours allotted to such work.

Students taking practical astronomy are required to take observations in the field for time, latitude, and azimuth.

Drafting Rooms.

Drawings prescribed for the first term of the session will not be counted unless finished in that term.

The minimum number of drawings shall be twenty-five, and the maximum number thirty-five, except in the Department of Analytical and Applied Chemistry, in which the number shall be fifteen and twenty-five respectively

No drawings will be counted which have not been made in the drafting rooms, and during the hours allotted to such work.

Theses.

In the Fourth Year each student is required to prepare a thesis on a subject approved by the Council. Except in cases where the Council gives permission to the contrary before the thesis is begun, the title of the thesis must be sent to the Council for approval before the regular meeting in November. The completed thesis must be handed to the Secretary of the Faculty not later than the first day of the second term and shall become the property of the University. Applications for extension of time beyond the date given must be made to the Council before the regular meeting in December.

EXEMPTIONS.

Applications for exemption from any of the regulations must be made to the Council in writing and the particulars of the case fully stated.

FOURTH YEAR SESSION, 1911-1912.

Students entering the Fourth Year in the session 1911-1912, will be guided by the curriculum and regulations as published in a separate folder, copies of which will be supplied on request by the Secretary.

DEPARTMENT OF CIVIL ENGINEERING.

Department 1.

The courses of study in Civil Engineering are designed to give the student a sound training in the fundamental scientific principles on which the practice of the profession is based. The instruction is given by means of lectures and practical work in the field,the drafting room and the laboratory. In this way the student is led to apply the principles developed in the class room.

Formerly the term Civil Engineering included all the branches of the profession, but some of these became so extensive as to require distinctive names and fields of work for themselves. Even yet Civil Engineering is so comprehensive as to render it impossible for anyone to master all its branches. It may be said to include surveying and topography; works connected with transportation, such as railroads and canals; municipal works, such as waterworks, sewers, streets and pavements; hydraulic works, such as power development, drainage, irrigation, etc.; structural works, such as bridges, roofs, etc.

Notwithstanding the variety of the branches of Civil Engineering above enumerated, they are underlaid by a comparatively compact body of scientific principles which form the basis of the work of instruction. While the subjects of the first year are largely fundamental, an effort is made, to give a professional aspect to the student's work from the very beginning. This is accomplished by the introduction of such subjects as field work and plotting in the curriculum of the first year. In the second and third years the study of fundamental science is continued together with its application to the solution of engineering problems. In the fourth year the student may elect to follow certain optional subjects which form a continuation of the work of the previous years. Here special stress is laid upon experimental work in the laboratory.

DEPARTMENT OF MINING ENGINEERING.

Department 2.

The course in Mining Engineering is intended to serve as a preliminary training for those who expect to practice the art of mining or metallurgy. In the first two years it differs very little from the course in civil enginering, in the third year some subjects peculiar to mining and metallurgy are taken up. In the fourth year the subjects are more particularly those of mining and metallurgy. By the choice of subject for thesis in the fourth year the student can follow his particular branch still further, and devote about one-quarter of the time in that year to the part of the studies which interests him most.

In general this course is designed to first give the student a good training in the parts of engineering essential to all branches such as surveying, drafting, etc., and then in the upper years to allow him to follow studies peculiar to mining engineering.

Candidates for the degree in this department will be required to present satisfactory evidence of having had at least six months' practical experience in work connected with mining, metallurgy or geology, for which they must have received regular wages. Certificate forms, giving full details as to acceptable classes of work, will be furnished on application and should be obtained by all students before entering employment.

DEPARTMENT OF MECHANICAL ENGINEERING.

Department 3.

The course in this Department is designed to meet the needs of those students who are intending to take up the work connected with Mechanical Engineering such as: the design of gas engines, steam engines, steam boilers, steam turbines, air compressors, etc.; the design and installation of the machinery connected with power plants and central stations, steam piping and other similar problems. The work is also so arranged that the student becomes somewhat familiar with the design of travelling cranes and mill buildings and similar problems connected with structural steel work.

Since the work of the mechanical engineer and of the electrical engineer are closely allied, the courses in these two departments in the first two years are identical and cover the subjects mentioned below.

In the third year the work becomes more specialized, the mechanical engineers paying more attention to heat engines of various types, and to mill building design and other work of similar nature. The study of electricity is continued and the student gets considerable practice in the mechanical and electrical laboratories.

In the fourth year the student devotes himself still more closely to his chosen work, placing the greater stress on thermodynamics and the theory and testing of heat engines, and problems in machine design. Much time is spent in the mechanical laboratories testing gas and steam engines and other machines. A portion of the time is devoted to electricity and the laboratory connected therewith.

Candidates for the degree in this department are required to present satisfactory evidence of having had at least eight months' practical experience in one of the principal trades connected with Mechanical Engineering, the object being that graduates may have some practical knowledge of the duties of the workman in this branch of engineering, as distinguished from those of the purely technical man. Certificate forms will be furnished on application. These forms contain full details in regard to the work. required.

DEPARTMENT OF ARCHITECTURE.

Department 4.

The instruction in this department is arranged to lay a broad foundation for the subsequent professional life of its graduates, and incidentally to prepare its students to be immediately useful in an architect's office. The curriculum has been arranged to meet the æsthetic and scientific needs of the profession, and includes History and Principles of Architecture, Free-hand Drawing in pencil, ink and color, Architectural Design, Analysis and Criticism of Buildings, Mathematics, Statics, Strength and Elasticity of Materials, Theory of Construction and Heating and Ventilation.

The equipment of the department includes a working library of 1,000 volumes, a large file of periodicals, 2,500 photographs, 2,000 stereographic photos, 4,500 lantern slides, and a large collection of models and casts.

DEPARTMENT OF ELECTRICAL ENGINEERING.

Department 7.

The course in Electrical Engineering is arranged to provide preliminary training for those who would follow any of the various lines of activity connected with electrical industry.

The first two years of the course are devoted to fundamental scientific principles, and incidentally more or less of their application to engineering problems in mechanical, civil, and electrical work. Many problems are solved in the drafting rooms by graphical methods. The third year includes further theoretical work, more particular attention being given to electrical and mechanical studies in theory, operation, and design. The fourth year is devoted to advanced work in alternating current theory and practise combined with similar study in thermodynamics or hydraulics.

A large amount of laboratory practise is provided, most of which belongs to the third and fourth years. In this last year most of the time is spent in laboratory investigations and studies resulting therefrom.

Candidates for the degree in this department will be required to present satisfactory evidence of having had at least eight months' practical experience in one of the principal trades connected with Electrical Engineering, the object being that graduates may have some practical knowledge of the duties of the workman in this branch of engineering as distinguished from those of the purely technical man. Certificate forms will be furnished on application. These forms contain full details in regard to the work required.

OUTLINE OF COURSES OF INSTRUCTION.

ARCHITECTURE.

10. STATICS.

Required in Departments 1, 2, 3, 4, 6 and 7, Year I; 2 hours per week; both terms.

This course of lectures deals with forces in a single plane,and concerns chiefly the calculation of tension, compression and shearing stresses in frame structures and solid beams. It also deals with the consideration of problems relating to friction.

11. DYNAMICS.

Required in Departments 1, 2, 3, 4, 6, and 7, Year I; 2 hours per week; both terms.

Kinematics and dynamics of rigid bodies, motion of translation, acceleration, graphics, the laws of motion, impulse and momentum, work and energy, power of pumps, etc.

Text book:—Tutorial Dynamics—Briggs and Bryan.

12. DYNAMICS OF ROTATION.

Required in Departments 1, 2, 3, 6 and 7, Year II; 1 hour per week; both terms.

Angular motion, velocity and acceleration, moment of inertia, simple harmonic motion, the pendulum, centres of mass, suspension and percussion, the phenomena of rotating bodies with special reference to such as fly wheels, governors, etc.

Text book:—Dynamics of Rotation—Worthington.

13. STRENGTH OF MATERIALS.

Required in Departments 1, 2, 3, 4, 6 and 7, Year II; 2 hours per week; both terms.

Elasticity and strength of materials mathematically treated, including tension, compression and shear; the strength of pipes, boilers and riveted joints; stresses and deflections in beams and columns; torsion and shear in shafts; suddenly applied loads; repeated stresses; resilience.

Text book;—Mechanics of Materials—Merriman.

14. STRENGTH AND ELASTICITY OF MATERIALS.

Required in Departments 1 and 4, Year III; 1 hour per week; second term.

This course is intended to give the student in Civil Engineering an introduction to the experimental study of the strength and elasticity of materials. It is intended that he shall acquire some familiarity with the construction and operation of testing machines and with the properties of the ordinary building materials.

15. STRENGTH AND ELASTICITY OF MATERIALS.

Required in Department 3, Year III; 1 hour per week; both terms.

A laboratory course similar in most respects to the course required in Department 1, Year III, but more attention is paid to the investigation of the properties of the materials of special interest to Mechanical Engineers.

16. STRENGTH AND ELASTICITY OF MATERIALS.

Optional in Year IV.

Most of the work taken up is in connection with structures in which the stresses are statically indeterminate.

Reference books:—Modern Framed Structures—Johnson; Roofs and Bridges, Part IV—Merriman and Jacoby.

17. STRENGTH AND ELASTICITY OF MATERIALS.

Optional in Year IV.

A course of laboratory experiments intended to give the student practice in investigating the elastic and physical properties of irons, steels, timber, concrete and other building materials.

Reference book:—Materials of Construction—Johnson.

18. THEORY OF CONSTRUCTION.

Required in Department 1, Year III; 2 hours per week; both terms.

In the first term, the theory relating to the design of box and plate girders is covered fully, and the complete design of a plate girder span is worked out in the class and drafting rooms.

The second term is given chiefly to the design of a riveted truss highway span and a pin-connected truss railway span, the complete designs being made in the lecture and drafting rooms. Restrained, continuous and trussed beams complete the term's work.

19. THEORY OF CONSTRUCTION.

Required in Departments 2, 3, 4, and 6, Year III; 2 hours per week; first term.

The work is practically the same as that for Department 1 in the first term except that a runway girder is designed instead of a plate girder bridge span, and that restrained, continuous and trussed beams are discussed at the end of the term.

Text books:—Modern Framed Structures--Johnson, Bryan and Turneaure; Roofs and Bridges, Part III, Bridge Design—Merriman and Jacoby; Pocket Companion—Cambria Steel or Carnegie.

20. RETAINING WALLS, FOUNDATIONS AND DAMS.

Required in Department 1, Year IV.

This course of lectures is devoted to the design of the structures mentioned. Preparatory to the discussion of the practical aspects of the subject, and in order to gain familiarity with the fundamental principles involved, a large part of the first term is given over to the consideration of the theory of compound stress. The most approved forms of construction of retaining walls, footings, abutments, piers and dams are then described, and typical designs are worked out in the class and drafting rooms.

Text books and books of reference:—Retaining Walls for Earth—M. A. Howe; Walls, Bins and Grain Elevators—M. S. Ketchum; A Practical Treatise on Foundations—W. M. Patton; A Treatise on Masonry Construction—I. O. Baker; Design and Construction of Dams—E. Wegmann.

21. CEMENTS AND CONCRETE..

Required in Departments 1 and 4, Year III; 1 hour per week.

A short course of lectures on the testing of cements, the use of concrete plain and reinforced, and the theory of reinforced concrete.

22. CEMENTS AND CONCRETE.

Required in Department 4, Year IV; optional in Departments 1 and 3, Year IV.

Manufacture, testing and use of Portland cement; concrete and reinforced concrete; mathematical theory of reinforced concrete.

Reference books:—Reinforced Concrete—Buel and Hill; Principles of Reinforced Concrete Construction—Turneaure and Maurer; Concrete, Plain and Reinforced—Taylor and Thompson.

23. STEEL AND IRON.

Optional in Year IV.

In this course of lectures are discussed the relations between the composition of steels and irons and their physical properties. The effects of heat treatment and the constitution and structure as revealed by the microscope, are studied. The subjects taken up in Year III. are continued.

24. MILL BUILDING DESIGN.

Required in Department 3, Year IV.

The structural problems involved in the design of steel mill buildings are discussed in this course of lectures. Types of buildings, various styles of trusses, columns and details are described and the complete design of a steel mill building is worked out in the class and drafting rooms.

Text book:—Mill Building Design—Milo S. Ketchum.

25. THEORY OF MECHANISM.

Required in Departments 3 and 7, Year II; 2 hours per week; both terms.

This course of lectures treats of the motions of machines, the latter being assumed to be of sufficient strength to resist acting forces. The formation of machines is dealt with in a general way and investigations of the velocities of points and links are made. The design of gear teeth and the application of trains of gears are taken up, also problems in static equilibrium.

Problems are worked out in the drafting room in which the methods given are employed.

26. MECHANICS OF MACHINERY.

Required in Departments 3 and 7, Year III; 3 hours per week; one term.

In this course the questions dealt with are the construction of acceleration diagrams, the determination of the accelerations of various parts of machines, the kinetic energy of machines, the effect of the weights and accelerations of parts on the velocity of the flywheel and the proper weight of the latter to fulfil given conditions. The theory of various forms of governors is also fully taken up and the efficiency of machines. The discussion of the design of slide valves and gears is continued in this course.

Text books:—Mechanics of Machinery—Kennedy; Slide Valve Gears —Halsey.

27. MACHINE DESIGN.

Required in Departments 3, 6, 7, Year III; 1 hour per week; both terms.

The lectures in this course deal principally with the applications of the principles of kinematics and the theory of the strength of materials to the design of machine parts, such as shafting, gearing, journals, clutches, etc.

In addition to the lecture course a considerable amount of time is spent in the drafting room where designs involving the above principles are worked out and the necessary calculations made. These designs are made as parts of some actual machine, such as an engine.

28. MACHINE DESIGN.

Required in Departments 3 and 6, Year IV.

The lectures and practical work in this course are meant to supplement those of course 25 and deal with more difficult problems and designs. The design of a complete machine is taken up and detail drawings as well as an assembly drawing are made.

29. HYDRAULICS—GENERAL COURSE.

Required in Departments 1, 2, 3 and 7, Year III; 2 hours per week; both terms.

This is an introductory course of lectures in hydraulics and is devoted to the development and discussion of fundamental formulæ relating to the flow of water in pipes, the measurement of discharge by various methods, such as orifices and weirs, the conditions of flow obtaining in open channels, artificial and natural, and in pipes flowing partially full; together with other kindred subjects.

The object of this course is to provide the student with a good working knowledge of the fundamental principles of hydraulics; such as is useful in practical work, and is necessary to the intelligent investigation of more advanced problems, such as the design of turbines, water wheels and power plants generally.

30. HYDRAULIC LABORATORY.

Required in Departments 1, 2, 3 and 7, Year III; 3 hours per week; one term.

The work in this course is intended to illustrate the lecture course given in hydraulics and to give the student some working acquaintance with the formulas and coefficients met with in practice. Experiments are made on the coefficients of velocity and discharge for orifices of different shapes and

sizes and for weirs. The coefficients obtained are used with orifices and weirs in measuring the discharge through meters, nozzles, etc., which are next under examination. Experiments on the friction of water in pipes and fire hose and in elbows and bends are also made, and the friction factors and coefficients of friction are determined.

31. HYDRAULICS. TURBINES, PUMPS AND WATERWORKS SYSTEMS.

Optional in Year IV.

Following up the third year course in this subject the theory already acquired is applied to the solution of problems connected with branched pipes, water mains discharging at various points along their length, the effect of a dam on the water level at any point on a stream and numerous other problems.

The most important question considered and to which most of the lectures are devoted is the theory of turbines and centrifugal pumps, the effect of the design on the speed, discharge, power and efficiency being fully taken up.

Text books:—Hydraulic Motors, etc.—Bodmer; Centrifugal Pumps—Innes; Hydraulics—Merriman.

32. HYDRAULICS.

Optional in Departments 1, 3 and 7, Year IV.

The time spent in the laboratory in the fourth year is devoted to experimental work on turbines of various types and centrifugal and turbine pumps and other similar devices. This experimental work is arranged to illustrate the lectures on turbine and pump design. The experiments are made on two large turbine pumps used in the laboratory supply, as well as on apparatus specially designed for instruction.

Various methods of measuring water power and the efficiency of machines are also given.

33. THERMODYNAMICS.

Required in departments 3 and 7, Year III; Department 1, Year IV.

In this course of lectures the subject is treated in such a way as to make it of practical value and give a working acquaintance with the principles on which it is based. After the elementary ideas have been given and the proofs of the properties of Carnot's cycle, applications of the subject are made to the perfect gas and to saturated steam and to the various types of engines. Temperatures are taken from the air thermometer.

34. THERMODYNAMICS.

Required in Department 2, Year IV; 1 lecture per week; both terms.

This course is especially designed to give the Mining Engineer a working knowledge of thermodynamics as applied to the perfect gas so that he will be able to understand clearly the action of air compressors, etc. After deducing general principles, the efficiency of compressed air transmission and the relative merits of different types of compressors is discussed.

35. THERMODYNAMIC AND MECHANICAL LABORATORY.

Required in Departments 3 and 7, Year III; 3 hours per week; second term.

This laboratory course is designed to assist in a clearer understanding of thermodynamics, machine design and mechanics of machinery. The work in thermodynamics consists in the setting of slide valves, indicating engines, measuring the brake horse power, simple engine and boiler tests and the testing of gas and gasoline engines under various conditions. The mechanical laboratory work deals with the efficiency of belts and ropes as well as of several machines of simple construction. An examination of lubricating oils is also made by means of oil testing machines and other well-known devices. Experiments are also made on the balancing of reciprocating and rotating masses.

36. THERMODYNAMICS.

Optional in Year IV.

This is a continuation of the introductory course, the subject being here treated from a general standpoint and the idea of entropy and of the absolute scale of temperatures being introduced. The course includes the treatment of saturated and superheated vapours, gases, the flow of fluids, chimney and boiler efficiency and the theory of various engines and other appliances including air compressors, refrigerating machines, injectors and the various forms of link motions and radial valve gears.

Text books:—Thermodynamics—Peabody; Steam Tables—Peabody.

37. THERMODYNAMICS.

Optional in Departments 3 and 7, Year IV.

The work in this year is a continuation and extension of the work covered in the third year laboratory course. Careful tests are made of engines of various types such as simple, tandem,

and cross-compound steam engines; steam turbines; refrigerating machines; air engine; injectors and steam pumps, etc.; and an application is made of Hirn's Analysis and the entropy diagram to the results obtained. A complete set of experiments is made on each machine and the result plotted so as to show clearly to the student the effect of various alterations in the adjustment of the engine on the resulting efficiency.

Several modern gas and gasoline engines and a gas producer give ample opportunity for the study of this type of engine, and facilities are provided for sampling the gas supply and exhaust.

Two experimental stacks and three boilers enable results to be obtained on boiler efficiency and chimney draft.

38. STEAM ENGINES.

Required in Departments 3 and 7, Year II; one hour per week; one term.

This course of lectures includes a discussion of the principles of action of the steam engine; also the theory and design of various simple forms of valve gears used in the operation of such engines.

A short course is given in the mechanical laboratories in connection with the above lectures which illustrates the principles of valves and valve gears.

39. HEAT ENGINES.

Required in Departments 3, 6 and 7, Year III; one hour per week, both terms.

This course in heat engines is intended for students in Mechanical Engineering, to be supplementary to the general course of lectures in thermodynamics given in the third year.

The principal commercial forms of heat engines are dealt with in a more or less descriptive manner; special attention is given to considerations affecting the design of the ordinary forms of steam engines, gas engines and oil engines.

ARCHITECTURE.

40. HISTORY OF ARCHITECTURE.

Required in Department 4, Year I; one hour per week; both terms.

In this course the development of architecture is treated very briefly and in an elementary manner, from the Pyramids of Egypt to the present, laying special emphasis on the Egyp-

tian, Grecian and Western Asiatic work. The antique Greek and Roman orders are studied and the students are required to make rendered drawings in the studio of certain orders and elements. An attempt is made to develop the student's sense of proportion and in the latter part of the second term he is required to study a simple problem in design.

41. History of Architecture.

Required in Department 4, Year II; one hour per week; both terms.

The Classical, Early Christian, Byzantine and Romanesque styles of architecture are studied with the aid of the lantern. The student is required to become acquainted with the best examples in these styles in order that his sense of proportion and his taste may be developed and his knowledge of the different elements extended.

42. History of Architecture.

Required in Department 4, Year III; one hour per week; both terms.

In this course the work of the previous year is continued, with the study of Gothic and the Renaissance.

43. History of Ornament.

Required in Department 4, YearII; one hour per week; both terms.

In this course the development of Ornament is traced from the beginning through Egyptian, Assyrian, Grecian, Roman, Byzantine, Romanesque and Moresque styles. An attempt is made to analyze ornament of the best periods and to systematize the principles followed in form and color. The development and the types of mouldings are also studied.

44. History of Ornament.

Required in Department 4, Year III; one hour per week; both terms.

A continuation of the course in Ornament given to the Second Year. Instruction is given in lectures with the aid of the stereoptican. The students are required to become familiar with the characteristics and forms of the ornament used in the Gothic and Renaissance styles.

45. ORDERS OF ARCHITECTURE.

Required in Department 4, Year II; one hour per week; both terms.

Lectures on the Five Orders of Architecture, their affiliated forms and the other elements used in design. Simple problems in elementary design involving the use of the orders and other elements are set from time to time.

46. ARCHITECTURAL DESIGN.

Required in Department 4, Year II; one hour per week; both terms.

This course is given by means of individual instruction in the class room by criticisms of the solutions of diffierent problems set during the year and by a series of lectures. It is in this course that the student begins the serious study of design; continued practice in architectural drawing and rendering afford the training necessary to make the student a proficient draughtsman.

47. ARCHITECTURAL DESIGN.

Required in Department 4, Year III.

Theory and practice of Design.

This course is given by individual instruction in the studio and by lectures. The greater part of the course is devoted to problems in design and forms a continuation of the course given in the preceding year.

48. ARCHITECTURAL DESIGN.

Required in Department 4, Year IV.

The entire course is devoted to advanced academic training in designing the more monumental classes of buildings. The student is required to design and submit sketches and working drawings of some subject to be selected by himself.

49. BUILDING MEASUREMENT.

Required in Department 4, Year I; 1 hour per week; both terms.

In this course of lectures the principles of measurements and mensuration with special reference to buildings will be discussed. With this is combined $4\frac{1}{2}$ hours per week practice in measurements of existing buildings, quantities, etc.

50 BUILDING MATERIALS.

Required in Department 4, Year III; 2 hours per week; both terms.

The structural and aesthetic value of the various building materials.

51. DESIGN OF TALL BUILDINGS.

Required in Department 4, Year III.

The structural features particularly incident to tall buildings are taken up, such as the discussion of deep foundations, grillages, arrangement of columns and beams, fire-proofing, wind bracing, details, etc.

Designs of typical building members such as footings, columns, girders, etc., are worked out in the class and drafting rooms.

Text book:—Architectural Engineering—J. K. Freitag; Skeleton Construction in Buildings—W. H. Birkmire.

52. SANITARY SCIENCE.

Required in Department 4, Year IV; 1 hour per week; both terms.

Modern plumbing, its design and installation.

53. HEATING AND VENTILATING.

Required in Department 4, Year IV; 1 hour per week; both terms.

The design of different systems, where they should be used, heating specifications, etc.

54. CONTRACTS AND SPECIFICATIONS.

ASTROMONY AND GEODESY.

55. ASTRONOMY, ELEMENTARY.

Required in Department 1, Year II; 1 hour per week; both terms.

A course in descriptive Astronomy. explaining the ordinary astronomical terms, and describing the various celestial bodies and their motions. In the evenings opportunity will be given for identifying the stars and for observing with telescopes.

Text book:—Introduction to Astronomy—F. R. Moulton.

56. ASTRONOMY AND GEODESY.

Required in Department 1, Year III. 2 hours per week.

The course of lectures deals with the determination of time, latitude, longitude and azimuth, by methods adapted to the use of the surveyor's transit and the sextant. It is designed to fulfil the requirements of the final examinations for Ontario and Dominion Land Surveyors.

In Geodesy an account is given of the principles and methods of a secondary triangulation survey, also of the principles involved in the North-West system of survey.

Text book.—Practical Astronomy as applied to Geodesy and Navigation, Doolittle; Nautical Almanac, 1911.

57. FIELD WORK.

Required in Department 1, Year III, 8 hours per week; first term.

The practical work in this subject comprises observations in the field with the transit and sextant for the determination of time, latitude and azimuth by the methods described in the lectures.

58. ASTRONOMY (Advanced).

Required in Department 1, Year IV.

The lecture course in this subject comprises the theory and adjustment of the instruments used in connection with a geodetic survey; the methods of taking and reducing observations for time, longitude, latitude, and azimuth, with the precision required on such a survey; and other matters relating to these subjects.

59. GEODESY AND METROLOGY.

Required in Department 1, Year IV.

The lecture course includes a description of the methods of measuring base lines, and the angles of a triangulation; the geometry of the spheroid with applications to geodetic problems; the computation of geodetic positions; the solution of large triangles on the earth's surface, and the adjustment of a triangulation; trigonemetric and precise spirit levelling; the determination of the figure earth by arc measurements, and by the pendulum; the theory of map projections, etc.

60. ASTRONOMY ,GEODESY AND METROLOGY.

Optional in Year IV.

The practical work in the above subjects includes the observation of meridian transits for time and longitude determinations, and of prime vertical transits for latitude, with the astronomical transit instrument; the observation of meridian zenith distances of stars, and of azimuths at elongation for latitude, with the alt-azimuth; theodolite observations for azimuth; observations for latitude with the zenith telescope; the investigation of the constants of the instruments used, and the reduction of all observations; the measurement of a base line with the steel tape, and the determination of the constants of the tape; the measurement of the angles of a triangulation and the adjustment of the angles of a network of triangles, etc.

BIOLOGY.

61. Elementary Biology.

Required in Department 5, Year I; optional in Department 1, Year III; 2 hours per week; both terms.

A course of two lectures a week throughout the session is designed as an introduction of the whole range of biological studies. After a sketch of the scope and objects of these, the lectures will treat (*a*) of the fundamental principles of biology, as illustrated by the simplest animals and plants; (*b*) of typical forms of higher plants in ascending order; (*c*) of typical forms of animals in a similar way; and (*d*) of the structure and functions of the human body. Students are recommended to make use of the Biological Museum in connnection with this coruse of lectures. For reference; Jeffrey Parker, Elementary Biology; Ramsay Wright, High School Zoology; Atkinson, Elementary Botany; Huxley, Lessons in Elementary Physiology.

62. Advanced Biology.

Optional in Department 5, Year II.

A course of instruction in the Morphology and Physiology of Bacteria, Moulds and Yeast Fungi.

63. Elementary Biology.

Required in Department 5, Year I; 3 hours per week; both terms.

An elementary course of laboratory work on the general structure and identification of plants and animals, and the use of the microscope in the examination of tissues and products.

BUSINESS.

65. Accounting.

Required in Year I; 1 hour per week; both terms.

The principles of accounting; illustrated by typical accounts.

66. Banking and Finance.

Required in Year II; 1 hour per week; both terms.

Money and the instruments of credit; bond issues, loans, sinking funds, etc.

67. Limited Companies.

Required in Year III; 1 hour per week; both terms.

Partnerships; the history and development of the limited liability company; the Companies Acts; Company finance.

68. Contracts and Specifications.

Required in Departments 1 and 4, Year IV.
Contract law; principles of specifications.

69. Cost-keeping, etc.

Required in Departments 2, 3, 5, 6, and 7, Year IV.
Works management, accounts, analysis of costs, reports.

CHEMISTRY.

75. Elementary Chemistry.

Required in Departments 1, 2, 3, 4, 5, 6, and 7; Year I; 2 hours per week; both terms.
A lecture course in elementary chemistry dealing with the metals and non-metals with experimental illustrations.
Text book:—Briefer Course—Remsen.

76. Elementary Chemistry.

Required in Departments 2 and 6, Year I; 3 hours per week; second term.
A laboratory course to illustrate the use of the sensitive balance, to verify some of the laws which form the basis of the science, and to serve as an introduction to quantitative laboratory methods. Instruction given as required before each period.

77. Inorganic Chemistry.

Required in Departments 5 and 6, Year I; 1 hour per week; both terms.
A lecture course on the elements and important inorganic compounds, supplementing course 75.
Text book:—Introduction to General Inorganic Chemistry—Alex. Smith.

78. Inorganic Chemistry.

Required in Department 5, Year I; about 17 hours per week; both terms.
A laboratory course of quantitative experiments illustrating the use of the sensitive balance, and confirming the fundamental laws of chemistry; qualitative inorganic analysis; quantitative analysis of pure salts; inorganic preparations; molar weight determinations.
Text book:—Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

79. INORGANIC CHEMISTRY.

Required in Departments 2, 5 and 6, Year II; 1 hour per week; first term.

A lecture course on the chemistry of the metals; a continuation of course 75.

80. ANALYTICAL CHEMISTRY.

Required in Department 5, Year II; Departments 2 and 6, Year III; 1 hour per week; both terms.

A lecture course on the principles of chemical analysis; select gravimetric and volumetric methods; technical analysis.

81. ANALYTICAL CHEMISTRY.

Required in Departments 1, 2, 3, 4 and 7, Year II; 6 hours per week; one term.

Laboratory practice in elementary qualitative and quantitative analysis.

Text book:—A Smaller Chemical Analysis—Newth.

82. ANALYTICAL CHEMISTRY.

Required in Department 2, Year II; 3 hours per week; both terms.

A laboratory course in the gravimetric determination of metals and acids, with elementary volumetric analysis.

Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

83. ANALYTICAL CHEMISTRY.

Required in Department 5, Year II; 14 hours per week; 18 weeks.

A laboratory course comprising gravimetric and volumetric methods, acidimetry and alkalimetry.

Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

84. ANALYTICAL CHEMISTRY.

Required in Department 6, Year II; 6 hours per week; both terms.

A laboratory course in qualitative and elementary quantitative chemical analysis; inorganic preparations.

Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

85. ENGINEERING CHEMISTRY.

Required in Departments 1, 2, 3, 5, 6 and 7, Year II; 1 hour per week; second term.

A lecture course consisting of a study of the industrial production and application of heat and light, and of the chemistry of fuel and the products of combustion.

86. INDUSTRIAL CHEMISTRY.

Required in Departments 5 and 6, Year II; 1 hour per week; both terms.

A lecture course on the manufacture of salts, acids, alkalies and inorganic chemicals.

Text book:—Industrial Chemistry—Thorp.

87. ORGANIC CHEMISTRY.

Required in Departments 1, 2, 3 and 7, Year II; 1 hour per week; first term.

A lecture course in elementary organic chemistry.

Text book:—Theoretical Organic Chemistry—Cohen.

88. ORGANIC CHEMISTRY.

Required in Departments 5 and 6, Year II; 2 hours per week; both terms.

A lecture course dealing with the aliphatic compounds.

Text book:—Theoretical Organic Chemistry—Cohen.

89. ORGANIC CHEMISTRY.

Required in Department 5, Year II; 14 hours per week; 8 weeks.

A laboratory course in organic preparations in the aliphatic series.

90. PHYSICAL CHEMISTRY.

Required in Departments 5 and 6, Year II; 2 hours per week; both terms.

A course of lectures on the elements of chemical mechanics, and the theory of solutions.

91. ANALYTICAL CHEMISTRY.

Required in Department 5, Year III; 19 hours per week; 16 weeks.

A laboratory course on the technical analysis of iron and steel alloys, ores, furnace products, ceramic materials, foods, gases, fuels, etc.

92. ANALYTICAL CHEMISTRY.

Required in Department 6, Year III; 11 hours per week; first term; 13 hours per week, second term.

A laboratory course in volumetric and technical analysis.

93. ANALYTICAL CHEMISTRY.

Required in Department 2, Year III; 5 hours per week; both terms.

A laboratory course on the technical analysis of ores and furnace products.

94. ENGINEERING CHEMISTRY.

Required in Departments 1, 2, 3, 5, 6 and 7, Year III; Department 4, Year II; 1 hour per week; both terms.

A lecture course on the application of chemistry to engineering problems; air, water, sewage, the materials of construction, explosives, etc.

95. INDUSTRIAL CHEMISTRY.

Required in Departments 5 and 6, Year III; 1 hour per week; both terms.

A lecture course on petroleum and its products, coal tar and its products, the destructive distillation of wood; fats, oils, soap, sugar, starch and gums; fermentation industries, etc.

Text book:—Industrial Chemistry—Thorp.

96. CHEMICAL PLANT.

Required in Departments 5 and 6, Year III; 1 hour per week; both terms.

A lecture course on the machinery and plant used in chemical manufacturing.

97. ORGANIC CHEMISTRY (A).

Required in Departments 5 and 6, Year III; 2 hours per week; both terms.

A lecture course on the aromatic series.

Text book:—Theoretical Organic Chemistry—Cohen.

98. ORGANIC CHEMISTRY (B).

Required in Department 5 and 6, Year III; 1 hour per week; second term.

A lecture course on stereoisomerism, desmotropism, etc.

99. ORGANIC CHEMISTRY.

Required in Department 5, Year III; 19 hours per week; 9 weeks.

A laboratory course in organic preparations in the aromatic series; organic analysis.

100. ORGANIC CHEMISTRY.

Required in Department 6, Year III; 17 hours per week; 4 weeks.

A laboratory course in organic preparations.

101. ELECTROCHEMISTRY.

Required in Departments 5, 6 and 7, Year III; 2 hours per week; first term.

A lecture course on elementary electrochemistry, illustrated by experiments.

102. ELECTROCHEMISTRY.

Required in Departments 5, 6 and 7, Year III; 3 hours per week; first term.

A laboratory course in quantitative measurements to accompany course 101.

103. INORGANIC CHEMISTRY.

Required in Departments 5 and 6, Year IV; 1 hour per week; both terms.

A lecture course on chemical theory.

104. ORGANIC CHEMISTRY.

Required in Departments 5 and 6, Year IV; 1 hour per week; both terms.

A lecture course on advanced organic chemistry.

105. ORGANIC CHEMISTRY.

Required in Departments 5 and 6, Year IV.

A laboratory course in advanced organic chemistry.

106. INDUSTRIAL CHEMISTRY.

Optional in Departments 5 and 6, Year IV.

A lecture course on selected subjects in chemical technology.

107. INDUSTRIAL CHEMISTRY.

Optional in Departments 5 and 6, Year IV.

A laboratory course in indusrtial problems.

108. ELECTROCHEMISTRY.

Optional in Departments 5, 6 and 7, Year IV; 2 hours per week; both terms.

An advanced lecture course on the theory of solutions and electrolysis, and the application to the practice of electro-deposition and electrolytic refining of metals. The course also includes lectures on the electric furnace with special consideration of efficiency.

Text books:—Electrometallurgy—Borchers; Electrochemistry—Le Blanc; Electrochemistry—Luepke.

109. ELECTROCHEMISTRY.

Optional in Departments 5, 6 and 7, Year IV.

A laboratory course accompanying course 108.

110. SANITARY AND FORENSIC CHEMISTRY.

Optional in Departments 5 and 6, Year IV; 1 hour per week; second term.

A lecture course on the composition and examination of air, water and food; poisons and their detection.

111. SANITARY AND FORENSIC CHEMISTRY.
Optional in Departments 5 and 6, Year IV.
A laboratory course accompanying course 110.

112. SANITARY CHEMISTRY AND BACTERIOLOGY.
Optional in Department 1, Year IV.
A lectures and laboratory course on water supply and sewage disposal.

113. SANITARY ENGINEERING.
Optional in Department 1, Year IV.
A lecture course in which consideration is given to the problems of water supply and sewage disposal as viewed by the engineer.

DESCRIPTIVE GEOMETRY AND DRAWING

115. DESCRIPTIVE GEOMETRY.
Required in Departments 1, 2, 3, 6 and 7, Year I; 1 hour per week; both terms.
This course of lectures deals chiefly with the principles of orthographic and oblique projections and the application of such principles to the solution of problems relating to straight lines and planes.

116. DESCRIPTIVE GEOMETRY.
Required in Department 4, Year I; 1 hour per week; both terms.
This course of lectures deals chiefly with the principles of orthographic and oblique projection and the application of such principles to the solution of problems relating to straight lines and planes, special reference being made to the determination of shades and shadows.

117. DRAWING.
Required in Departments 1 and 2, Year I; about 16 hours per week.
Copying from the flat, lettering, topography; graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; the plotting of original surveys; measured drawings.

118. DRAWING.
Required in Department, 4 Year I; about 15 hours per week.
Copying from the flat, lettering, topography, freehand drawing in black and white, both from copies and models; the graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; measured drawings. Elements and principles of Architecture.

119. DRAWING.

Required in Department 5, Year I; about 9 hours per week.
Copying from the flat, lettering, measured drawings.

120. DRAWING.

Required in Departments 3, 6 and 7, Year I; about 20 hours per week.
Copying from the flat, lettering, topography; graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; measured drawings.

121. DESCRIPTIVE GEOMETRY.

Required in Departments 1, 2, 3, 6 and 7, Year II; 1 hour per week; both terms.
This course of lectures is a continuation of the work taken in the first year with the following additions: Problems relating to curved surfaces, principles of shades and shadows, and perspective.

122. DESCRIPTIVE GEOMETRY.

Required in Department 4, Year II; 1 hour per week both terms.
This course of lectures is a continuation of the work taken in the First Year with the addition of problems relating to curved surfaces, Shades, Shadows, and Perspective.

123. DRAWING.

Required in Departments 1 and 2, Year II; Department 1, about 10 hours per week; Department 2, about 6 hours per week; both terms.
Coloring and shading as applied to both topographical and construction drawings; problems in descriptive geometry relating to solids bounded by curved surfaces; principles of shades, shadows, and perspective; solution of problems in optics and strength of materials; measured drawings; elementary design.

124. DRAWING.

Required in Departments 3 and 7, Year II; about 10 hours per week.; both terms.
Coloring and shading as applied to construction drawings; problems in descriptive geometry relating to solids bounded by curved surfaces; principles of shades, shadows, and perspective; solution of problems in optics, theory of mechanism and strength of materials; measured drawings; elementary design.

125. DRAWING.

Required in Department 4, Year II; about 18 hours per week; both terms.

Coloring and shading as applied to construction drawings. Freehand drawing, including water colors and monochrome; exercises from the orders of architecture; problems in descriptive geometry, relating to solids bounded by curved surfaces; principles of shades, shadows and perspective; solution of problems in optics and strength of materials; measured drawings; elementary design.

126. DRAWING.

Required in Department 6. Year II.

Same as Department 3, with exception that theory of mechanism is not included.

127. DESCRIPTIVE GEOMETRY.

Required in Department 1, Year III. 1 hour per week; one term.

This course of lectures deals with spherical projections, the principles of map making, and the graphical solution of spherical triangles.

128. DRAWING.

Required in Department 1, Year III. About 12 hours per week.

Principles of map making, spherical projection, plotting of original surveys relating to topographical and railway work; problems in thermodynamics and theory of construction; original design of various structures; measured drawings.

129. DRAWING.

Required in Department 2, Year III; $4\frac{1}{2}$ hours per week.

Plotting of original surveys, relating to topographical and railway work and mining; problems in thermodynamics and theory of construction; original design; measured drawings.

130. DRAWING.

Required in Department 4, Year III; about 21 hours per week.

Problems in descriptive geometry, shades ,shadows and perspective; problems in thoery of construction; advanced work in water colors and monochrome; original design including framed structures; measured drawings.

131. DESCRIPTIVE GEOMETRY.

Required in Department 4, Year III; 1 hour per week; first term.

Advanced work in shades and shadows and perspective.

ELECTRICITY.

135. MAGNETISM AND ELECTRICITY.

Required in Departments 3, 5, 6 and 7, Year I; 2 hours per week; first term.

A course of lectures on general principles relating to magnetism, electricity, electromagnetism, electrostatics, etc., illustrated largely from engineering apparatus.

Text book:—Elementary Electricity and Magnetism—S. P. Thompson

136. ELECTRIC CIRCUITS.

Required in Departments 3, 5, 6 and 7, Year I; 2 hours per week; second term.

This course of lectures concerns chiefly fundamental principles relating to electric circuits and leads to consideration of such problems as the distribution of electric energy through lines and networks and the division of load between generators.

Text Book:—Electrical Problems—Hooper and Wells.

137. ELECTRICITY.

Required in Departments 3, 5, 6 and 7, Year I; 3 hours alternate weeks; both terms.

A laboratory course of experiments, given in logical order, designed to demonstrate fundamental principles in connection with the generation and flow of currents in electric circuits. The work is associated with the lecture courses, magnetism and electricity, and electric circuits. (135, 136).

138. ELECTRICITY.

Required in Departments 3, 5, 6 and 7, Year II; 2 hours per week; both terms.

Deals with the theory of electrical measurements, and detailed study of various methods applicable under different conditions in engineering practice to the measurement of resistance, current, potential difference, power and energy; calibration of commercial measuring instruments. The effect of choice of conditions of measurement on the accuracy of the result is considered.

Text book:—Electrical Measurements—Carhart and Patterson.

139. ELECTRICAL LABORATORY.

Required in Departments 3, 5, 6 and 7, Year II; $2\frac{1}{2}$ hours per week; both terms.

This laboratory course is closely associated with the lecture course 138 on electricity for the second year. The more im-

portant and useful methods of testing generators and circuits for electromotive force, resistance, current, grounds, etc,. are practised, often under conditions such as occur in practice. The work also includes methods of calibration of measuring instruments for voltage, current, power and energy, and certain studies of properties of incandescent lamps.

140. ELECTRICITY.

Required in Department 2, Year III; Departments 1 and 4, Year IV.

A course designed to fit the requirements of non-electrical students. A study of essential principles is followed by disscusion of electrical apparatus, plants, power transmission railways, etc.

Text book:—Elementary Electricity and Magnetism—Jackson.

141. POWER.

Required in Departments 2 and 6, Year IV.

Under the name "Power" a number of operating experiments are arranged to afford mining and chemical engineering students some familiarity with measuring instruments, direct and alternating current machinery.

142. MAGNETISM AND ELECTRICITY.

Required in Departments 3 and 7, Year III; 2 hours per week; both terms.

A course of lectures on theory of magnetism and magnetic circuits, theory of direct current generators, motors, etc.

Text book:—Elements of Electrical Engineering—Franklin and Esty.

143. ALTERNATING CURRENT.

Required in Departments 3 and 7, Year III; 2 hours per week; second term.

A first course of lectures on alternating current, covering principles of measurement and leading to the analytical and graphical treatment of the simpler problems relative to alternating current circuits and machinery.

Text book:—Elements of Electrical Engineering—Franklin and Esty.

144. ELECTRICAL LABORATORY.

Required in Departments 3 and 7, Year III.

This laboratory course is intended to afford the student an opportunity to become familiar with principles involved in continuous current shunt, series and compound wound generators and motors, and, to some extent, alternating

current circuits and machinery. Other sections of the work deal with the magnetic properties of iron and steel, and study of iron losses in transformers and generators.

The course is arranged to stand in close relation to the lecture courses in the subjects of magnetism and electricity and alternating current (142, 143) for Year III, and to certain design work (145).

145. ELECTRICAL DESIGN.

Required in Department 7, Year III.

A course of lectures dealing with design of electric machinery and plants, accompanied by designs to be worked out in the design room.

References:—Dynamo-electric Machinery—S. P. Thompson; Electric Machine Design—Parshall and Hobart.

146. APPLIED ELECTRICITY.

Required in Department 7, Year IV.

This course deals by analytical and vector methods with the theory of alternating current circuits and machinery. Applications of theory are considered with regard to transformers, single and polyphase generators, synchronous motors and rotary converters, induction and commutating series motors, transmission lines, wave analysis, etc.

Text books:—Alternating Currents—Franklin and Williamson; Elements of Electrical Engineering—Franklin and Esty.

147. ELECTRICAL LABORATORY.

Required in Department 7, Year IV in connection with 146.

This laboratory course involves a thorough study of principles and properties of single and polyphase circuits and apparatus. Both vector and analytical methods are applied to the sollution of problems based on tests made on laboratory machines.

The work deals mainly with constant voltage and constant current transformers, single and polyphase alternators, synchronous motors, rotary converters, induction and single phase commutating motors, transmission line, etc. The work does not consist only of factory tests, but is designed to lead the student to apply theory to practice as illustrated in the apparatus under test ,with a view to an exact understanding of methods and an appreciation of limitations under many conditions. Free use is made of the oscillograph as a necessary device for "seeing" conditions under investigation. The best commercial measuring instruments are availabe.

GEOLOGY.

150. Geology. (Elementary).

Required in departments 2 and 5, Year II; Department 1, Year III; 1 hour per week; both terms.

This course deals chiefly with historical geology with special reference to Canadian formations.

Reference books:—Introduction to Geology—Scott; Text Book of Geology—Dana.

151. Economic Geology. (Including Dynamical and Structural Geology.)

Required in Department 2, Year III; 2 hours per week; both terms; and Department I, Year IV.

A study of the more important economic rocks, minerals and ores with their geological associations. Special attention paid to Canadian deposits.

152. Advanced Geology.

Required in Department 2, Year IV.

(A) Pre-Cambrian Geology,—An account of the Keewatin, Huronian and Laurentian rocks of Canada, with their distribution, structural relations and economic features, and briefer accounts of similar formations in the United States and elsewhere. Works of Reference, Reports ofthe United States and Canadian Geological Surveys, of the Bureau of Mines of Ontario, etc.

(B) Pleistocene Geology.—Lectures on the formation and distribution of the drift deposits of North America, with brief references to other regions. Glacial, Interglacial and Post glacial beds are described, changes of climate are discussed with their probable causes, and the economic features of the clays, sands and gravels are pointed out. A weekly excursion is made during October and November to points of interest near Toronto, which is the centre of the most important development of Pleistocene in America.

(C) Physiography.—A course of lectures on the surface forms of the earth, with the geological factors which have produced them. The broad features of the earth, its plains, tablelands, hills, valleys, mountains, oceans, rivers and lakes are discussed in a general way, methods of topographical surveys and mapping are referred to, and the chief physiographic areas of Canada are described.

153. MINING GEOLOGY.

Required in Department 2, Year IV.

A course of lectures on geological problems associated with mining, typical mining regions in Canada, the United States elsewhere being discussed from the geological side. Works of reference, Mineral Industry and the books mentioned under (A).

154. GEOLOGICAL EXCURSIONS.

Required in Department 2, Year IV.

Trips to points of interest in the vicinity of Toronto.

155. ORE DEPOSITS.

Required in Department 2, Year III; 1 hour per week; both terms.

Discussion of the origin and classification of ore deposits in a general way, the mode of occurrence of the chief metals, and statistics of production, special attention being given to the metals mined in Canada.

156. ECONOMIC GEOLOGY.

Required in Department 2, Year III; 1 hour per week; both terms.

Laboratory work on ores, manner of occurrence, vein structure, etc. Geological maps of typical mining regions.

MINERALOGY.

157. ELEMENTARY MINERALOGY.

Required in Department 5, Year I, and in Department 2, Year II; 2 lectures per week; first term.

After introducing the student to the chief chemical, physical and crystallographic characteristics of minerals, the course becomes descriptive and deals with about one hundred of the minerals most important from the industrial or scientific point of view.

TEXT books:—Minerals and how to study them—Dana; Text Book of Mineralogy—Dana.

158. MINERALOGY.

Required in Department 5, Year I; 4 hours per week; first term. 3 hours per week; second term.

Introduction to blow-pipe analysis, determination of minerals by inspection and physical tests.

Text books:—Text book of Mineralogy—Dana; Mineral Tables—Eakle; Determinative Mineralogy and Blow-Pipe Analysis—Brush-Penfield.

159. PRIMARY MINERALOGY.

Required in Department 1, Year II; 2 lectures per week; first term. A very brief introduction to the study of minerals and rocks.

Text books:—Minerals and how to study them—Dana; Handbook of Rocks—Kemp.

160. MINERALOGY.

Required in Department 2, Year II; 1 hour per week; first term; 3 hours per week; second term. Determination of minerals by inspection and by means of physical tests; introduction to blow-pipe practice.

Text books:—Mineral Tables—Eakle; Determinative Mineralogy and Blow-pipe Analysis—Brush-Penfield.

161. MINERALOGY.

Required in Department 1, Year II; 1 hour per week; first term; 2 hours per week, second term. Determination of minerals by inspection and by means of physical tests; study of common rock types and their identification.

Text books:—Mineral Tables—Eakle; Handbook of Rocks—Kemp.

162. MINERALOGY.

Required in department 5, Year II; 1 hour per week, second term. Introduction to the study of rocks; determination of minerals and rocks by means of tables based on the physical properties.

Text books:–Mineral Tables–Eakle; Handbook of Rocks:–Kemp.

163. ELEMENTARY PETROGRAPHY.

Required in Department 2, Year III; lecture per week.

A course of lectures and laboratory work introducing the student to the macroscopic study of rocks.

Text books:—Handbook of Rocks—Kemp; Rocks and rock minerals—Pirsson.

164. MINERALOGY.

Required in Department 2, Year III; 2 hours per week. Determination of minerals by means of the blow-pipe and physical properties.

Text books:—Mineral Tables—Eakle; Determinative Mineralogy and Blow-Pipe Analysis—Brush-Penfield.

165. GENERAL PETROGRAPHY.

Required in Department 2, Year IV.

Study of the chief rock-forming minerals and of some phases of petrography not covered in the course of the previous year.

166. Petrography:—Required in Department 2, Year IV. Study of the chief rock-forming minerals, of rocks in thin sections and in hand specimens.

Text books:—Rocks and Rock Minerals—Pirsson; Minerals in Rock Sections—Luquer.

167. Crystallography.

Required in Department 5, Year III; 1 lecture per week.

A course devoted to lectures and practical work on the geometical and optical properties of crystals, preparing the student for the study of rocks in thin sections and for the examination of crystallized substances, natural and artificial, under the polarizing microscope.

MINING, METALLURGY AND ORE DRESSING.

170. Mining.

Required in Department 2, Year II; 1 hour per week; second term.

An introduction to the study of mining and ore dressing methods.

171. Mining and Ore Dressing.

Required in Department 2, Year II; 3 hours per week; second term.

Introductory work with rock-drills and various ore dressing appliances.

172. Mining.

Required in Department 2, Year III.

General mining methods.

173. Assaying.

Required in Departments 2, 5 and 6, Year III.

Assaying of various ores for gold, silver, lead and copper.

174. Assaying.

Required in Departments 2, 5 and 6, Year IV.

Continuation of the work of Year III.

175. Mining.

Required in Department 2, Year IV.

Special mining methods, examinations, reports.

176. Milling.

Required in Department 2, Year IV.

Advanced work with ore dressing appliances, complete mill tests.

177. Metallurgy.

Required in Department 2, Year IV.

Experiments in the pyro-metallurgy of copper and lead, refining of base bullion, cyanide tests.

178. Metallurgy.

Required in Departments 2, 5 and 6, Year II; 1 hour per week; one term.

An introduction to the study of general metallurgy.

179. Metallurgy.

Required in Departments 2, 5 and 6, Year III.

General metallurgy of gold, silver, lead and copper.

180. Metallurgy.

Required in Departments 2, 5 and 6, Year IV.

Advanced studies in the metallurgy of gold, silver, copper and lead, etc.

181. Metallurgy of Iron and Steel.

Required in Departments 1, 2, 3, 5, 6, and 7, Year III.

The physical properties of iron and steel and the circumstances that influence the strength, etc. of iron. The different modes of manufacture of iron and steel and the effect of different processes of making on the resulting products. Explanations of specifications for iron and steel adopted by engineers.

182. Ore Dressing.

Required in Department 2, Year III.

183. Mining and ore Dressing.

Required in Department 2, Year III.

Continuation of work of Year II. Experimental work to determine falling ratios, magnetic permeability of minerals, etc., sampling of mill products and ore in place.

184. Ore Dressing.

Required in Department 2, Year IV.

MATHEMATICS.

187. ALGEBRA.

Required in Departments 1, 2, 3, 4, 5, 6, and 7, Year I; 2 hours per week; both terms.

Simple equations of one, two and three unknown quantities; quadratic equations of one and two unknown quantities; elementary treatment of variation, proportion and progressions; interest forms and annuities, permutations, combinations, binomial theorem.

Text book:—Intermediate Algebra—DeLury.

188. ANALYTICAL GEOMETRY.

Required in Departments 1, 2, 3, 4, 5, 6, and 7, Year I; 1 hour per week; both terms.

The course in Elementary Analytical Geometry covers the more familiar propositions in connection with the straight line, circle, parabola, ellipse and hyberbola. The subject is treated so as to illustrate the general methods of analytical geometry.

189. TRIGONOMETRY, PLANE.

Required in Departments 1, 2, 3, 4, 5, 6, and 7, Year I; 2 hours per week; both terms.

Trigonometrical ratios with their relations to one another, sines, etc., of the sum and difference of angles with deduced formulæ, solutions of triangles, expressions or the area of triangles, radii of circumscribed, inscribed and escribed circles.

Text book:—Practical Trigonometry—Plane and Fawdry.

190. CALCULUS, DIFFERENTIAL AND INTEGRAL.

Required in Departments 1, 2, 3, 4, 6, and 7, Year II; Department 5, Year II, optional; 2 hours per week; both terms.

This is an elementary course in the infinitesimal calculus, but adequate to afford a knowledge of the character and methods of the subject and to enable students in chemistry, engineering, etc., to understand such of their text books as introduce the calculus.

191. TRIGONOMETRY, SPHERICAL.

Required in Department 1, Year II; 1 hour per week; first term.

The course of lectures includes the derivation of formulæ and their application to the solution of triangles and to practical problems.

Text book:—Spherical Trigonometry—Todhunter and Leatham.

192. Least Squares, Method of.

Required in Department 1, Year III; 1 hour per week; first term.

The course of lectures includes: The general principles of probability, the law of error, direct measurements of equal and diffierent weights; mean square and probable errors; indirect measurements; conditioned observations; applications to empirical constants and formulæ, etc.

Text book:—Least Squares—Merriman.

TECHNICAL PHYSICS.

195. Acoustics.

Required in Department 4, Year III.

Wave motion, propagation, reflection and transmission of sounds Laws of vibrating strings, pipes and forks. Velocity of sound. Musical scales. Absorption of sound by various substances, use of deadening material in buildings. Amount of reverberation permissible and desirable in public buildings. Lectures and Laboratory work—Fall Term.

196. Hydrostatics.

Laws of fluid pressure and application to machines. Density of solids and fluids, theory of flotation.

Lectures and Laboratory work, Spring term.

197. Optics.

Rectilinear propagation of light, illumination, photometry, light standards. Distribution of light by reflectors and diffusers, general and selective absorption, economic values of artificial lights.

Laws of reflection and refraction, theory of optical instruments, stereo-grammetry.

Light considered as wave motion, dispersion spectrum analysis, color phenomena, polarization.

Lectures and Laboratory work, Fall term.

198. Heat.

Generation and propagation of heat. General and industrial thermometry, calorimetry and pyrometry. Linear and cubical expansion, gas laws. Specific heat of solids, liquids and gases, latent heat of fusion and vaporization. Mechanical equivalent of heat. Carnot cycle.

Lectures and Laboratory work, Fall term.

199. PHOTOGRAPHY.

The camera and its adjustments, lenses, shutters, screens. Plates for various purposes, films, prevention of halation. Lighting, exposure development. Paper of various kinds, printing, enlargement and reduction, blue printing and allied processes. Record photography, photogrammetry and photo-surveying. Photography in color.

Lectures and Laboratory Work.

SURVEYING.

205. SURVEYING.

Required in Departments 1 and 2, Year I; 1 hour per week; both terms.

The lecture course includes—the general principles; surveying with the chain, the compass and chain and the transit and chain; the applications of trigonometry to inaccessible heights and distances; mensuration of surfaces and solids, co-ordinate surveying, division of land, etc.

Text books:—Land Surveying—Gillespie; Theory and Practice of Surveying—Johnson.

206. FIELD WORK.

Required in Departments 1 and 2, Year I; 9 hours per week; first term.

This course comprises—testing chains; practice in chaining; a complete survey of a piece of land with the chain; keeping of field notes; the use of the compass and transit in surveying closed figures and traverse lines and in ranging straight lines; plotting by latitudes and departures and otherwise; computing areas.

207. SURVEYING.

Required in Departments 1 and 2, Year II; 1 hour per week; both terms.

This course of lectures takes up in detail, simple, reverse and compound curves as applied to ralroad surveying. It also includes stadia, plane table and photographic surveying as applied to topographic work and also the main features of mine and hydrographic surveying.

Text books:—Henck, Shunk, Searles, Allen (Field books for Engineers) Theory and practice of surveying—Johnson; Plane surveying —Raymond.

208. FIELD WORK.

Required in Departments 1 and 2, Year II; 9 hours per week; first term.

This course of instruction embraces all adjustments of the transit, accurate determination of angles of closed figure, minor problems in triangulation—ordinary and special problems as applied to railroad work in regard to curves, simple, reverse and compound, profile levelling and plotting of profile.

209. SURVEYING AND LEVELLING.

Required in Departments 1 and 2, Year III; 1 hour per week.

This course of lectures takes up the work of the railroad engineer on construction, including profiles, cross sectioning, computation of volume of earth work, overhaul, transition curves, laying out turnouts, frogs and switches, etc.

Also a discussion of trigonometric and barometric levelling.

Text books:—Field Engineering—Searles; Railroad Curves and Earthwork—Allen.

210. FIELD WORK.

Required in Departments 1 and 2, Year III; about 9 hours per week; fall term.

This includes adjustments of levels and accurate check differential levelling, determination of profile, cross sectioning and computation of earthworth of located line on ground and plotting of same. Also cross sectioning by use of hand level. A complete stadia topographic survey is made and plotted. The spiralling of curves on track already laid down and practical methods of locating and placing sidings and switches.

RAILWAY ENGINEERING.

211. RAILWAY ENGINEERING.

Required in Department 1, Year IV.

The object of this course is to make the student acquainted with the general principles of railroad and street railway engineering and the subject will be studied from the standpoint of—economic theory of location; train resistance; effect of grade, distance and curvature and rise and fall; maintenance of way;yards and terminals; tunnels, and street railway practice.

212. FIELD WORK.

Optional in Year IV.

During the first term an original survey for a railroad some one or two miles in length will be made, the work to be conducted according to the most modern methods of location. Upon the completion of this work, a contour map of the district surveyed will be plotted in the drafting room and a line adjusted to it. This will be staked out in the field, profiles taken and complete estimates of the cost of construction made.

MODERN LANGUAGES.

213. FRENCH.

Required in Department 4, optional in Departments 1, 2, 3 and 7, Years I and II; 1 hour per week; both terms.

An elementary course intended to train the student in the translation of scientific journals and treatises.

214. GERMAN.

Required in Departments 5 and 6, optional in Departments 1, 2, 3 and 7, Years I and II; 1 hour per week; both terms.

An elementary course intended to train the student in the translation of scientific journals and treatises.

THESIS.

215. THESIS.

Required of all departments Year IV.

Each student is required to prepare a thesis of between eight thousand and ten thousand words on a subject approved by Council.

VACATION WORK.

216. CONSTRUCTION NOTES. See special circular of information.

OUTLINE OF VACATION WORK.

CONSTRUCTION NOTES.

Required in Years II and III.

The construction notes required consist of neat and complete dimensioned sketches in pencil of any structures, machines or plant which may be of interest. Any object chosen should be represented and dimensioned in such a manner that it could be completely constructed from the notes as the only available information.

From students in Department 2, who have been actually engaged during the summer with Government or other approved geological survey parties, geological field notes will be accepted in lieu of construction notes.

PROFESSIONAL DEGREES.

The attention of graduates is directed to the following regulations respecting professional degrees.

The following degrees have been established: Civil Engineer (C.E.), Mining Engineer (M.E.), Mechanical Engineer (M.E.), Electrical Engineer (E.E.), Chemical Engineer (Chem.E.), subject to the following regulations:—

1. A candiate for one of the said degrees shall hold the diploma of the School of Practical Science or of the Faculty of Applied Science and Engineering and the degree of Bachelor of Applied Science except in the case provided for in clause 11 hereunder.

2. He shall have spent at least three years after receiving the degree of Bachelor of Applied Science in the actual practice of the branch of engineering wherein he is a candiate for a degree.

3. Intervals of non-employment or of employment in other branches of engineering shall not be included in the above three years. It shall not be necessary that the several periods requisite to make up the said three years be consecutive.

4. Satisfactory evidence shall be submitted to the University examiners as to the nature and length of the candidate's professional experience for the purpose of clauses 2 and 3.

   The Examiners shall satisfy themselves by oral or written examinations in regard to the candidate's experience and competence.

5. The candidate shall prepare an original thesis on some engineering subject in the branch in which he wishes a degree; the said thesis to be accompanied by all necessary descriptions, details, drawings, bills of quantities, specifications and estimates.

   The candidate may be required at the option of the Examiners to undergo an examination in the subject of this thesis.

6. Notice in writing shall be sent to the Secretary not later than the first day of February, informing him of the degree to which the candidate wishes to proceed and of the title of his proposed thesis for the approval of the Examiners.

7. The evidence under clause 4, and the thesis, with accompanying papers, described in clause 5, shall be sent to the Secretary not later than the first day of April.

8. The candidate shall be required to present himself for examination in the month of April at such time as may be arranged by the Examiners.

9. The fee for any one of the said degrees shall be twenty dollars, and shall be paid to the Bursar not later than the first day of April.

10. The thesis, drawings, and other papers submitted under clause 7 shall become the property of the University.

11. Candidates who graduated from the School of Practical Science before June, 1895, shall not be required to hold the degree of Bachelor of Applied Science.

EXTRACTS FROM SURVEY ACTS.

From the Ontario Act Respecting Land Surveyors and Survey of Lands (R.S.O.)

"26. Any person serving as an apprentice as hereinbefore provided, may, with the permisssion of the Board of Examiners, attend the Ontario School of Practical Science, or any school, college or university, the course of study in which is, in the opinion of the Board, sufficiently similar to that in the Ontario School of Practical Science, for the purpose of taking any course of study which includes any subjects required for the final examination for admission to practice as a land surveyor, but the total period of such apprenticeship and of such course of study shall not exceed the period of four years from the date of the articles of apprenticeship as above mentioned, and not less than three years of the said period of four years shall be passed in the actual service of a practising Ontario Land Surveyor.

* * * * * * * *

"28. The privilege of a shortened term of apprenticeship shall also be accorded to any graduate of the Royal Military College at Kingston or of the Ontario School of Practical Science in civil engineering or in mining engineering, or of the McGill College, Montreal, in civil engineering or in mining engineering, and such person shall not be required to pass the preliminary examination hereinbefore required for admission to apprenticeship with a land surveyor, but shall only be required to serve under articles with a practising land surveyor duly filed as required by section 32 of this Act, during twelve successive months of actual practice, after which, on

complying with all the other requirements, he may undergo the examination prescribed by this Act.

"29. Such person at any time during his apprenticeship may,with the permission of the Board of Examiners, attend the Ontario School of Practical tical Science, or any school, college or university, the course of study in which is, in the opinion of the Board, sufficiently similar to that in the Ontario School of Practical Science, for the purpose of taking any course of study which includes any subject required for the final examination for admission to practice as a land surveyor, but the total period of such apprenticeship, and of course of study, shall not exceed the period of two years from the date of the articles of apprenticeship as above mentioned, and not less than twelve months of the said period of two years shall be passed in the actual service of a practising Ontario Land Surveyor."

From Act Respecting Manitoba Land Surveyors.

"28. (1) The privilege of a shortened term of apprenticeship shall be accorded to graduates of the Royal Military College of Canada and to graduates in civil engineering of the University of McGill College of Montreal, the School of Practical Science of Toronto, the School of Mining at Kingston, and graduates of Manitoba University who have taken first or second class honours in the special course in mathematics; and such graduates shall not be required to pass the preliminary examination hereinbefore prescribed for admission to apprenticeship with a land surveyor, but shall only be required to serve under articles with a practising land surveyor, duly filed as required by section 24 of this Act, during twelve successive months of actual practice of which at least six months shall be at actual practice in the field, after which, on complying with the other requirements of this Act, he may undergo the examination for commission to practice prescribed by this Act."

From British Columbia Land Surveyors' Act, 1905.

"52. Whosoever shall have followed, during at least two years, a regular course of studies in all the branches of the sciences required by law in order to be received as a land surveyor; who has attended the lectures of a British university or college where a complete course of theoretical and practical instruction is given in civil engineering, physics, and all other branches of sciences required by law in order to be admitted as a land surveyor, and who has received from such university or college, after a regular examination, his diploma or degree as a civil engineer or land surveyor, on satisfying the Board that he is duly qualified as aforesaid, may, without undergoing the examination for admission to the study of land surveying, be received as a student by any member of the Corporation practising in

this Province, and shall be bound to perform only twelve months' actual service in the field as such, or; if he has obtained his degree or diploma as a civil engineer or land surveyor in less than two full years, then only such time of service which, added to the time he has devoted to his course of studies, shall complete the period of three full years; and, at the expiration of the said active service, such person, on complying with the other provisions of this section, shall have the right to present himself and undergo the examination required by law, and, if qualified, to be admitted to practise as a land surveyor for the Province as if he had served his three full years under his indentures with a practising land surveyor; but instead of paying fifty dollars he shall be obliged to pay sixty dollars as fees for his examination and commission as land surveyor."

The above section is to be taken collectively as a whole, no separate clause or sentence can be applied to any particular case.

From the Dominion Lands Act, 1908.

"Every graduate in surveying of the Royal Military College of Canada. and every person who has followed a regular course of study in all the branches of education required by this Act for admission as a Dominion land surveyor, for at least two years, in any college or university where a complete course of theoretical and practical instruction in surveying is organized, and who, after examination has thereupon received from such college or university a diploma or certificate, shall be exempt from serving three years aforesaid, and shall be entitled to examination for a commission after being admitted upon examination as aforesaid as an articled pupil and serving one year under articles with a Dominion land surveyor, including six months' actual practice with him in the field, on producing an affidavit from the said surveyor in said form C, together with his own affidavit in said form D, that he has served for one year as herein provided; but it shall rest with the Board to decide whether the course of instruction in such college or university meets the requirements of this section.

EXTRACT FROM THE ONTARIO ARCHITECTS' ACT.

"Any student who has matriculated in Arts in any University in His Majesty's dominions, or in the Ontario School of Practical Science, shall not be required to pass the preliminary examinations.

"23. Any person who applies for admission to registration as an architect after the coming into force of this Act, shall be not less than twenty-one years of age, shall have served as a student not less than five years with a principal or principals entitled to register under this Act, or with any other principal or principals approved by the Council, and have passed such qualifying examinations as may be required by this Act.

"24. (3) Any person who has graduated from the Ontario School of Practical Science shall be required to serve only three years as a student, one of which three years may be served during the vacation of such school.

"(4) Upon and after the passing of this Act, students shall serve such term as is required to be served by the provisions of this Act, under indenture to be a registered architect, which indenture and any assignment thereof with affidavit of execution thereto attached shall be filed with the Registrar upon payment of such fees as the Council may by regulation direct.

LABORATORY EQUIPMENTS.

THERMODYNAMIC AND MECHANICAL LABORATORY.

The University in 1909 completed the erection of a large, well-equipped building for the accommodation of the steam, gas, mechanical and hydraulic laboratories. A more complete description of the laboratories has been published elsewhere so that the present description is only intended to give the main features.

The part of the building set apart for thermodynamics and other mechanical work is the ground floor of a room 60 ft. x 155 ft. This room is lighted entirely from the roof in a very perfect way. A part of the space 40 ft. wide running the entire length of 155 feet is served by a 3-ton travelling crane and contains the following equipment:

50 h.p. Brown engine with separate jackets on both heads and barrel of cylinder.

Two-stage Rand air compressor having compound steam cylinders, each fitted with Meyer cut-off gear. The low pressure air cylinder has Corliss inlet gear.

30 h.p. high-speed Leonard tandem compound engine with shaft governor.

15 h.p. high speed McEwen engine.

75 h.p. two line compound Willans engine.

15 h.p. DeLaval turbine with special nozzles for condensing and non-condensing tests.

Two 15 h.p. Leonard engines with different types of valves, which are used for valve setting.

There are also two surface condensers with air pumps so arranged that any engine in the laboratory may be made to exhaust into the atmosphere through an open heater or into one of the condensers, the change from one arrangement to the other being accomplished in a few minutes without the aid of valves.

The laboratory further contains

A 3-ton York refrigerating machine with tanks.

An Amsler transmission dynamometer.

Apparatus for testing injectors and steam pumps.

Numerous other pieces of apparatus and instruments.

The work on internal combustion engines and producers is performed on the following:—

18 h.p. Canada suction gas producer.

14 h.p. National gas engine arranged for various compressions and points of ignition.

10 h.p. Fielding and Platt engine for city gas or coal oil, having various adjustments.

8 h.p. Otto gas engine.

6 h. p.marine gasoline engine.

Ericsson air engine.

Various accessories to above machines.

Steam for the laboratory is supplied by two 50 h.p. and one 100 h.p. Babcock and Wilcox boilers, the latter having an internal superheater. These boilers are located in a separate boiler room. They are used for experimental work only and are fitted up for testing. The gases pass up through two independent chimneys and these have been arranged so that the draft and other conditions in the chimney at any point of its height may be examined.

In smaller work rooms off the main laboratory are placed belt and oil testing machines, apparatus for testing the efficiency of gears and machines, and for experiments in the balancing of machinery.

HYDRAULIC LABORATORY.

The hydraulic laboratory occupies two floors each 40 feet x 112 feet, which are well lighted by large windows on the side and end.

The water for the experimental work is pumped through the various pieces of apparatus from a well by means of two turbine pumping units both of which are driven by a Belliss and Morcom compound engine of 125 h.p. running at a speed of 525 revs. per minute. Both engine and pumps have been installed with a view to using them in experimental work as well as for supply of water for other apparatus used in the laboratory.

The pumping units are capable of delivering one cubic foot of water per second against heads of 250 feet and 300 feet respectively. These units are designed and connected up so that they may be run in series giving the above discharge at 550 feet head or they may be run in parallel giving double the discharge at a lower head. Each pumping unit consists of two two-stage pumps mounted on a common base and driven by a single pulley and the construction and piping are such that each two-stage pump may be driven separately or that all may be driven at oncc, discharging separately one cubic foot per second at about 125 feet head through each of four inde pendent pipes, or else the pumps may be run in series or in parallel. The scheme is thus well adapted to laboratory work and under the heads used on reaction turbines about six cubic feet per second may be obtained.

The laboratory further contains a large vertical steel tank 5½ feet diameter by 34 feet high with arrangements for the attachment of nozzles and other mouth pieces, etc. Connections are also arranged for reaction turbines, the tank acting as a reservoir.

The discharge from the turbines or nozzles is measured in a weir tank nearly 6 feet wide and 21 feet long containing a contracted weir 4½ feet wide. This weir may be calibrated by two weighing tanks each having a capacity of about 240 cubic feet.

There are three reaction turbines and two impulse wheels all ready for experiment, the power being measured by brakes and the water by weir or orifices. Amongst the reaction turbines may be mentioned the one designed and built by Escher Wyss and Co., specially for the laboratory.

Smaller orifice and weir tanks each about 3 x3 x12 feet with necessary measuring tanks are arranged for instruction in coefficients of various kinds and practice with weirs and orifices.

A Venturi meter and other meters, also an hydraulic ram and similar devices are available for testing, and good facilities have been arranged for investigating friction and other properties of pipes and fire hose.

For special investigations on turbine and centrifugal pumps, other pumps in addition to those already described have been arranged.

The basement of the laboratory contains an open trough 5 feet wide about 110 feet long with a large weir at one end. It is intended to use this trough for experiments on the flow in open channels, for measurements of large discharges by means of the weir, and for experiments with current meters and Pitot tubes.

Numerous pieces of smaller apparatus together with all instruments required have also been provided, and the laboratory equipment is believed to be very complete.

DONATIONS TO THE THERMODYNAMIC AND HYDRAULIC LABORATORIES.

The following donations to the equipment of the laboratories have been made through the kindness of those mentioned.

50 h.p. Wheeler Surface Condenser, presented by Mr. F. M. Wheeler, New York.

Blake Feed Pump, presented by the manufacturers.

6 inch New American Turbine, presented by Wm. Kennedy & Sons, Owen Sound, Ont.

Two Crown Water Meters, presented by the National Meter Co., New York, through Mr. M. Warnock, Toronto.

Rock Drill presented by Sullivan Machinery Co., New York, through Mr. A. E. Blackwood, '95.

Marine Gasoline Engine, presented by Canadian Fairbanks Co., Montreal.

Two engines with different types of valve, presented by Messrs. E. Leonard & Sons, London, Ont.

Bundy trap from American Radiator Co., through Messrs. Russell & Gifford.

Dunham steam trap from C. A. Dunham Co.

Sectional models of valves from American Radiator Co.

Sectional model Mason Reducing Valve by Russell & Gifford.

In addition to the above, other firms have materially assisted by offering apparatus at or below cost price, among whom may be specially mentioned, The Canadian Rand Drill Co., Sherbrooke, Quebec.

PHYSICAL LABORATORIES.

The optical laboratory is equipped with Weinhold optical benches and accessories for determining the constants of mirrors and lenses and for demonstrating the construction and use of telescopes, field glasses, microscopes, etc. There is also a full equipment of optical instruments including telescopes, microscopes, field glasses, comparators, spectrometers, level tester, photometers of various types, focometer, dynameter, cathetometer, polariscope, projecting lanterns, etc.

The photographic laboratory is supplied with several cameras for viewing, copying, enlargement and reduction, a spectroscopic camera and an electric blue printing machine and the necessary dark rooms.

The hydrostatic laboratory contains a supply of various forms of hydrometers, hydrostatic balances, Jolly balance, Mohr's balance, hydrostatic press, vacuum pumps, gauges, etc.

The heat laboratory is equipped with a full supply of calorimeters and accessories for determinations of latent and specific heat, expansion apparatus, air thermometer, apparatus for verification of Boyle's law and pressure and boiling point curve and for determination of the absolute expansion of mercury. Callendar's apparatus for determination of the mechanical equivalent of heat.

The acoustical laboratory is provided with sonometer, siren, forks ordinary and electric, Lissajous' and Melde's apparatus, organ pipes of various forms, manometric flame apparatus and a special equipment for work in architectural acoustics consisting of torsion chronograph, electropneumatic wind chest and standardized organ pipes and other accessories.

STRENGTH OF MATERIALS LABORATORY.

This laboratory is intended for the scientific and commercial testing of the materials of construction such as iron, steel, timber, concrete and masonry.

It is supplied with the following:

An Emery 50-ton hydraulic machine, built by Wm. Sellers & Co., of Philadelphia, for making tests in tension and compression.

A 100-ton screw power machine, built by Riehle Bros., Philadelphia. It is designed for making tests in tension, compression, shearing and cross-breaking and will take in posts 12 feet long and beams up to 18 feet in length.

A Riehle 10-ton screw power universal testing machine.

A Riehle 50-ton screw power universal testing machine.

A 15-ton single lever-machine, built by J. Buckton & Co., Leeds, England.

A torsion machine, built by Tinius Olsen & Co., Philadelphia, for testing the strength and elasticity of shafting. This machine will twist shafts up to 16 feet in length and 2 inches in diameter.

A hand power torsion machine of simple mechanical construction, specially designed for the testing of short shafts of a maximum diameter of one inch.

A Riehle transverse testing machine of 5,000 pounds capacity, adapted to specimens up to 48 inches in length.

A Riehle compressometer, with spherical seat attachment for the adjustment of specimens having slightly non-parallel faces. This compressometer will receive specimens up to 10 inches in length.

An Olsen compression micrometer of standard type.

A 20,000 pound Olsen, hand power ,wire testing machine, especially fitted for testing wooden columns with both fixed and pivoted ends.

A Riehle abrasion cylinder, built to the standard required by the National Brick Makers' Association, adapted in 1901.

A large number of extensometers of the usual degree of precision. These include the Bauschinger, Martens, Unwin, Marshall, Riehle, Johnson, Henning (recording) and other types. In addition there are the usual scales, micrometers, telescopes and reflectors, voltmeters for the determination of metallic contract, and such other appliances as are necessary in the making of precise measurements.

The shop is equipped with a number of high-class machine tools specially fitted for reducing the specimens to the requisite shapes and dimensions with a minimum of hand labour. It is also supplied with the necessary appliances for making ordinary repairs and for making apparatus for special experiment and original investigation.

CEMENT TESTING LABORATORY.

This laboratory is fitted with all the ordinary moulds, sieves, balances, burettes, steaming and drying tanks, tables, and other appliances necessary in making the usual physical tests of a Portland cement. In addition there are the following:—

A Riehle 2,000 lb. machine fitted for either tension or compression.

A 2,000 lb. Riehle shot machine for tension.

A 2,000 lb. Fairbank's shot machine for tension.

A 1,000 lb. Olsen automatic shot machine fitted for tests in either tension or cross breaking.

An Olsen soapstone moist closet of modern design.

METROLOGICAL LABORATORY.

The department of surveying and geodesy is provided with all the ordinary field instruments, such as transits, levels, compasses, micrometers, sextants, planimeters, plane tables, tapes, chains, etc., with which is carried on the instruction in practical field operations as detailed elsewhere.

A small laboratory is also established in the basement of the observatory described below, containing the necessary instruments for the refined measurements of geodetic surveying; as, a standard yard and metre, a Rogers 10 foot comparator, a Kater's pendulum with vacuum chamber a level trier, micrometer, microscopes, etc.

The geodetic observatory in connection with this department is used for the instruction of students of the fourth year in taking observations for time, latitude, longitude, and azimuth by the precise methods used in connection with a geodetic survey. It contains a 10 inch theodolite and zenith telescope by Troughton & Simms; an astronomical transit instrument and an 8 inch theodolite by Cooke; an electro-chronograph; a Howard astronomical clock; a Dent sidereal break-circuit chronometer; arithmometers, etc.

ELECTRICAL LABORATORIES.

Galvanometer laboratory:—This laboratory is equipped with numerous galvanometers, resistance boxes, bridges, potentiometers, standard resistances, standard cells, etc., and much other usual and special apparatus for varied electrical experiments of the more delicate variety.

This laboratory also contains apparatus for studying the various types of arc and incandescent lamps.

Another room is fitted more especially for calibration of electrical instruments for alternating and direct currents. About one hundred and twenty portable measuring instruments are available for students' use, also standard instruments, including Weston laboratory standards, Kelvin balances, and a Wolff potentiometer, with which the portable instruments may be compared.

Machine Laboratory:—This laboratory, occupying two large rooms, contains twenty-five dynamos and motors varying in capacity from two to twenty kilowatts, adapted for experiments illustrating the properties of compound shunt and series dynamos and motors, arc machines, etc. Switch-boards, numerous rheostats, lamp racks, starting boxes, circuit breakers, flexible cables, brakes, torsion dynamometers, tachometers, etc., are available for use with the machines.

This laboratory also contains two 15 kw., 25 cycle and two special 15 kw., 60 cycle General Electric polyphase revolving field alternaotrs direct driven by motors, two rotary converters of 10 kw. and 5 kw. capacity, a 7½ kw. General Electric polyphase induction motor with slip ring rotor, Westinghouse three phase squirrel cage induction motors, Wagner single phase motor, Westinghouse single phase series motor, Westinghouse alternator, and several three phase and single phase induction motors; also transformers, reactive coils, and other details, as in the direct current section of the laboratory described above, for experiments on the properties of alternating currents and alternating current apparatus in general. A constant -current transformer with its load of six series arc lamps, a three-element oscillograph, for studying wave forms, a high potential transformer and a mercury arc rectifier may also be mentioned. The students are suppled with Weston, Westinghouse and Thomson portable instruments for measuring purposes.

Magnetic Laboratory:—A room is fitted with appliances for the study of saturation and hysteretic properties of samples of iron and steel. as well as a transformer for determining dielectric strength. The room also serves for exercise in winding models of direct current armatures, alternators, etc.

CHEMICAL LABORATORIES.

The Chemical laboratories are situated in the western half of the Chemistry and Mining building, on the first and second floors. The rooms are large and well lighted, and are supplied with the usual modern equipment.

The first and second year laboratory for qualitative work has accomodation for 112 students, each working space being supplied with water, gas and fume cupboard. The laboratory for quantitative analysis will accommodate 48 students, and is supplied with commodious fume cupboards and all necessary apparatus. A laboratory with working places for 36 is provided for the students engaged in the study of technical chemistry; it is equipped with appliances for the preparation and testing of chemical

products. Each of these laboratories has its own balance room adjoining, furnished with instruments from the best makers and adapted to the particular objects in view.

In addition there are rooms set apart for gas analysis, electrolytic analysis, calorimetry, and a specially constructed fireproof laboratory for combustion, crucible and bomb furnaces. Each of these laboratories is supplied with apparatus of the most approved design, providing excellent facilities for the prosecution of work in analytical and technical chemistry.

ELECTROCHEMICAL LABORATORIES.

The Electrochemical laboratories which are situated in the Chemistry and Mining building are provided with special facilities for electrolytic work, including a large storage battery and electroplating dynamo with tanks as well as a complete set of apparatus and electrical measuring instruments. The experimental work on electric furnaces is performed in two rooms specially equipped for this purpose with rheostats and switchboard connections to a 120 kw. D.C. generator, which supplies the current required.

GEOLOGICAL AND MINERALOGICAL LABORATORIES.

In the Chemistry and Mining building on College Street the University possesses a modern laboratory for Geology and Mineralogy.

Brief courses are given in laboratory work, especially in personal examination of type sets of rocks, fossils, minerals and crystal models. These laboratory exercises serve to illustrate the introductory didactic instruction.

For the encouragement of pure crystallography the laboratories are supplied with goniometers of the various types, crystal models, appliances for the cutting of oriental crystal sections and for the physical examination of the same. Practical petrography is carried on in rooms provided with type sets of rocks, both macroscopic and microscopic. Advanced students are taught to make thin sections of rocks and fossils and to study them microscopically. Students in palæontology are given instruction in the preparation of material for study and are afforded an opportunity of examining type series of specimens.

The laboratory for the preparation of thin sections of rocks, minerals and fossils is provided with electric diamond saws and grinding appliances for the various types of work incidental to the preparation of thin sections and museum material.

A room is also provided for advanced work in cartography and geological surveying.

The departments possess 28 petrological microscopes and 5 of other types so that it is now possible to provide advanced students with instruments and sets of thin sections for their own especial use. The blowpipe laboratory contains 156 lockers, especially designed for apparatus for students.

ASSAYING LABORATORIES.

Two assaying laboratories are situated in the basement of the Chemistry and Mining building, one has a floor space of 17 feet x 47 feet, and the other 28 feet x 37 feet. Adjoining each is a room 15 feet x 11 feet, with the necessary equipment for the wet work in connection with assaying. Common to both laboratories is a balance room furnished with gold balances set on a concrete pier. Each of the laboratories contains a number of melting holes (13 in all) for crucible fusions, various gas furnaces both for crucibles and muffles, and a large brick muffle furnace.

The furniture comprises lockers for the students, tables for the pulp balances and the necessary cabinets and shelving.

Adjoining the assay laboratories is a preparation toom (19 feet x 13 feet) which is equipped with a motor, crusher, pulverizer, sample grinder and all the necessary hand pulverizers, screens, etc., for preparing ores for assay.

The metallurgical room is 40 feet x 21 feet and is equipped at present with a reverberatory furnace for roasting sulphide and arsenical ores, a water Jacketted blast, furnance for copper smelting, fume cupboard, lockers, tables, etc., and is intended for hydro-metallurgical work.

MILLING AND CONCENTRATING PLANT.

A detached building 72 feet x 70 feet in area, contains the milling and concentrating equipment. It is heated, lighted and supplied with power from the main building, and is divided into two parts. The greater part, with 72 feet x 53 feet floor space, and 22 feet high, contains the milling and concentrating equipment. The machinery for the former operations consists of a five-stamp battery erected on concrete foundation. Challenge ore feeder, amalgamating plates, Wilfley table concentration, a clean up pan, steel settling tanks, a steel tank suspended from the roof girders to furnish a constant supply of water, and a track with travelling crawl to transport ore. This is driven by a 15 horse power motor.

The concentrating part consists of a set of five revolving trommels for wet screening, four three-compartment jigs, a trough classifer delivering three products, and two revolving buddles, Wilfley Slimer, Deister Slimer, Richard's Pulsating Classifier, Richard's Pulsating Jig, a Behrend Dry Concentrator, a dry sizer, besides experimental apparatus of various kinds for experimenting on the falling rates of ore particles, the settling of slimes, surface tension action in grease and flotation methods, etc. The waste products run to the same settling tanks as the tailings from the stamp battery. The ore is handled by a travelling crawl. All the machinery in this part is driven by a 10 horse power motor.

The plant throughout is intended mainly for experimental purposes and is made of such a size that numerous experiments can be carried out on small quantities of ore. Tests can also be made on lots of one or two tons.

The other part of the milling building with 72 feet x 17 feet floor space and 15 feet high, is divided into four separate rooms. The largest of the four rooms has an area of 476 square feet and is devoted to the crushing and pulverizing of the ores preparatory to their treatment in the milling and concentrating room. It is isolated in order to confine the dusty operations as far as possible to this one room, and is equipped with a gyrating crusher of Hadfield's make, a set of Hamilton rolls 16 inches by 12 inches' platform scales for weighing ore, a jib crane, pulleys, buckets, etc., for handling the rock. An adjoining room contains a 30 h.p. motor for driving the machinery of the crushing department, and storage bins for ore, work bench, etc. Another room with 17 feet x 15 feet floor space, is furnished with a magnetic separator of the Rowan-Wetherill make, driven by its own motor.

One room of the same size as the above remains available for future additions.

MUSEUM.

The Geological and Mineralogical Museum of the University is open to students of the Faculty of Appled Science, and is also accessible to the general public from 9 to 5 p.m. throughout the year.

The Museum is situated in the south-east corner of the ground floor of the Chemistry and Mining building, and may be entered from the door at that corner of the building.

The southern half of the room is occupied by the cases of the palæontological collection in which are arranged a large series of fossils. These specimens are placed so as to display together the great groups of animals, while the minor divisions are based on stratigraphical grounds. Particularly worthy of note are the fine series of Crinoids and Cystids and the type specimens of Eastern Canada Cambrian fossils. A large part of this collection is due to the generosity of Sir Edmund Walker and Sir Wm. Mackenzie. On the walls of the museum are being placed some excellent specimens of large extinct vertebrates.

To the north of the fossil collection is the Ferrier Cabinet of Minerals containing good examples of nearly all the minerals known to science, as well as a special case with specimens of the various minerals from the Cobalt Mining District.

The northern part of the room is occupied by twenty cases exhibiting all the important rocks both igneous and sedimentary which go to make up the crust of the earth.

Around the walls are placed cases containing the chief economic mineral products arranged in accordance with their practical application to human activities. This collection is particularly rich in specimens from Ontario localities and includes most of the material formerly exhibited in the Engineering building.

LIBRARY.

Rooms have been set apart in the Engineering and the Chemistry and Mining buildings for the housing of such periodicals and other literature of the University Library as is of special interest to the students of this faculty.

SOCIETIES.

THE ENGINEERING SOCIETY OF THE UNIVERSITY OF TORONTO.

Officers for 1911-1912.

President.....W. B. McPherson.
1st Vice-President.....E M. Watts.
Vice-Pres. Civil & Archl. Secs.....J. E. Ritchie.
" *Mechanical & Elec. Secs*.....G. J. Mickler.
" *Chemistry & Mining Secs*.....K. S. MacLachlan.
Recording Secretary.....H. A. Heaton.
Corresponding Secretary.....A. A. McQueen.
Treasurer.....C. F. Elliott.
Permanent Secretary.....H. Irwin.
Curator.....R. G. Matthews.
Fourth Year Representative.....W. J. T. Wright.
Third Year Representative.....R. F. B. Wood.
Second Year Representative.....F. C. Mechin.
First Year Representative.....To be elected.
Senior Varsity Representative.....C. S. Fowlds.

The Society meets every second Wednesday during the academic year. Papers are read, and discussions are held on engineering subjects. The Society publishes a pamphlet monthly during the academic year, containing the best papers read at the meetings. A supply department is conducted by the Society, on a co-operative plan through which instruments, drafting supplies, stationery, etc., may be purchased at a low cost.

UNIVERSITY OF TORONTO ELECTRICAL CLUB, 1910-1911.

President.....W. P. Dobson.
Vice-President.....J. H. Billings.
Secretary-Treasurer.....T. H. Crosby.
Councillors.....H. J. McTavish. R. A. Story. R. Taylor.

The Society meets every second Thursday evening during the academic year for the discussion of papers relating to mechanical and electrical engineering problems too technical for consideration in the Engineering Society. The membership is limited to members of the senior and final years.

ATHLETIC ASSOCIATION OF THE FACULTY OF APPLIED SCIENCE.

EXECUTIVE COMMITTEE, 1910-1911.

Honorary President.....Dean Galbraith.
President .....C. E. Richardson.
Vice-President.....R. S. Bell.
Secretary-Treasurer .....To be elected.

LODGING AND BOARD.

Accommodation is readily obtainable in numerous private boarding-houses within convenient distance of the University, at a cost of from four dollars and a half a week upwards for comfortable lodging with board; or rooms may be rented at a cost from one dollar and a half per week upwards, and board obtained separately at moderate rates. A list of accredited boarding-houses is kept by the Secretary of the University Young Men's Christian Association, and students are recommended to consult him with reference to the selection of suitable accommodation.

UNIVERSITY RESIDENCES,

The attention of students is directed to the accommodation which has been provided in the new residences situated within the University grounds. These residences will accommodate in all about one hundred and fifty men. Every reasonable comfort is supplied.

The room rental varies from two dollars to three and a half dollars per week, and suitable board may be conveniently obtained at the University Dining Hall at three dollars per week.

The residences and dining hall are under University management.

Applications for rooms should be made in writing to the Registrar of the University at as early a date as possible.

GYMNASIUM AND ATHLETIC GROUNDS.

"The University gymnasium was completed and equipped in 1893. It is fully provided with the best and most modern appliances for physical culture, and contains a running track, shower baths and swimming bath, besides the necessary dressing rooms and other conveniences. A competent instructor in gymnastics is in constant attendance to superintend and direct the exercises of students. In addition to the lawn in front of the Main University Building and a campus in the rear, a large plot of ground on Devonshire Place has been set apart as an athletic field. By this addition the facilities for football, cricket, tennis and other out door athletic sports are doubled, as compared with previous accommodation; and by these grounds, in conjunction with the gymnasium, ample opportunity is afforded to all students for healthful exercise and physical development. To assist in meeting the expenses of the gymnasium, a nominal annual fee is imposed on those who avail themselves of its advantages. The supervision of all athletic matters has been entrusted by the Council to an Athletic Board, consisting of six members appointed from the Faculty and officers of the Atheltic Association. All applicants of clubs for the use of grounds must be made annually to this Board. All such applications must be accompanied by a list of officers. In the case of new clubs the list of officers must be accompanied by particulars as to the organization and objects of the club making application."

STUDENTS' UNION BUILDING.

"In 1894 additions were made to the front of the building in which the gymnasium is situated, consisting of a large hall for public meetings, a reading room and committee rooms. This additional accommodation is available for the work of the various students' societies, and for academic purposes. Applications for the use of rooms, accompanied by a list of officers and a copy of the constitution of the society making application, must be made, through the President, to the joint committee of the Councils on Gymnasium and Students' Union Building, at the beginning of the season, or from time to time as occasion requires. Arrangements have also been made by which recognized societies may obtain the use of committee rooms on application to the janitor of the Students' Union Building."

FACULTY OF APPLIED SCIENCE AND ENGINEERING.

Historical Sketch.

The Legislative Assembly during the Session of 1877 gave its sanction to the establishment of a School of Practice Science on the basis proposed in the memorandum of the Minister of Education confirmed by the Lieutenant-Governor in Council on the 3rd day of February, 1877.

By the scheme thus approved of, Government effected an arrangement with the Council of University College whereby the students of the School of Practical Science enjoyed full advantage of the instruction given by its professors and lecturers in all the departments of science which were embraced in the work of the School.

This arrangement was brought to an end in 1889 by the transfer of the department of science above referred to, from University College to the University of Toronto under the operation of the University Federation Act.

In order that the students of the School might continue to enjoy the advantage of the instruction of the above departments, the Senate of the University of Toronto passed a Statute in October, 1889, affiliating the School to the University, which Statute was confirmed by the Lieutenant-Governor on the 30th day of October, 1889.

By an Order-in-Council, approved by the Lieutenant-Governor, on the 6th day of November, 1889, a Principal was appointed, and the management of the School was entrusted to a council composed of the Principal as chairman, and the Professors, Lecturers and Demonstrators appointed on the Teaching Faculty of the School.

By the terms of this order the management and discipline of the School was vested in the Council.

By a Statute of the Senate of the University of Toronto, passed on December 14th, 1900, the teaching staff and examiners of the School of Practical Science, together with the examiners for the degree of B.A.Sc., and professional degrees in Engineering, were constituted ex-officio the Faculty of Applied Science and Engineering of the University of Toronto.

By an Order-in-Council dated the 30th day of January, 1903, the Council of the School was made to consist of the Principal, the Professors and Lecturers, together with the Registrar.

By the University Act, 1906, the School of Practical Science was united to the University of Toronto as its Faculty of Applied Science and Engineering.

GRADUATING DEPARTMENTS.

There are seven regular Departments of Instruction leading to the degree of Bachelor of Applied Science:—

1. Civil Engineering.
2. Mining Engineering.
3. Mechanical Engineering.
4. Architecture.
5. Analytical and Applied Chemistry.
6. Chemical Engineering.
7. Electrical Engineering.

The instruction given in these departments extends over a period of four years and is designed to give the student a thorough knowledge of the scientific principles underlying the practice in the several professions, and also such training as may make him immediately useful when he commences professional work.

PROFESSIONAL DEGREES.

Bachelors of Applied Science may, after three years spent in professional work, present themselves for the degrees of Civil Engineer (C.E.), Mining Engineer (M.E.), Mechanical Engineer (M.E.), Electrical Engineer (E.E.), or Chemical Engineer (Chem. E.), as the case may be, subject to the rules and regulations established by the University. (See page 72).

FELLOWSHIPS.

Fellowships of the value of $500 each, open to graduates, are offered annually in the various departments.

Applications for these fellowships are to be made annually in writing to the Secretary of the Faculty on or before the 1st day of May.

SCHOLARSHIP.

The Boiler Inspection and Insurance Company of Canada offers a Scholarship in the Department of Mechanical Engineering of the value of $130.00 to the student who obtains highest Honour Standing in the regular examinations of the third year.

The successful candidate will be expected to proceed to his fourth year during the session next following the date of the award.

The amount of the award will be credited by the Bursar to the fees of the fourth year of the successful candidate.

Research Fellowship.

Two research Fellowships of the value of $500 each are offered annually by the Alumni Association of the Faculty of Applied Science and Engineering.

I. MATRICULATION.

1. The matriculation requirements of this Faculty are based upon those given in the curriculum for Junior Matriculation, a copy of which may be obtained on application.

2. A candidate for matriculation must produce satisfactory certificates of good character.

3. The subjects are as follows:

English, History, pass standing in Honour Mathematics and any three of the following, viz., Greek, Latin French, German, Experimental Science.

In selecting the options it is recommended that students take French, German and Experimental Science. In the department of Architecture French is required, in Applied Chemistry and Chemical Engineering German is required and in Mechanical Engineering it is desirable that students take German.

4. The pass standard is forty per cent. of the marks assigned to a paper, with an average of sixty per cent.

5. A candidate who has obtained an average of sixty per cent. on all the papers but has failed to obtain forty per cent. in not more than two papers may complete matriculation by passing on these papers at any one subsequent examination.

6. Candidates who obtained, prior to 1910, pass standing in at least a majority of the subjects may complete Junior Matriculation by passing in the remaining subjects at a subsequent examination.

7. The examination for pass and honour Junior Matriculation is held annually in June at centres in Ontario, and, if application is made to the Senate, the examination may, with the co-operation of the Department of Education, be held at centres outside Ontario.

8. Applications accompanied by the fee of $5.00 must be sent not later than the 15th of May to the local Public School Inspector, or in the case of candidates intending to write at the University, to the Registrar.

9. A Junior Matriculation examination, at which no honour papers are set, will be held in September at the University and at such other centres as may from time to time be authorized. Candidates entitled to the privileges of supplemental examinations as well as new candidates, may present themselves at this examination.

10. Applications to write on the September examination, together with the necessary fee, must be received at the Department of Education not later than September 1, for those who wish to write at any centre established in Ontario, and not later than August 1 for any centre elsewhere in Canada.

NOTE.—Received too late for incorporation in the Calendar.—A. T. L., *Sec.*

8. DEPARTMENT OF METALLURGICAL ENGINEERING.

The object of this four year course is to provide instruction and preliminary training for those who intend to become metallurgical engineers. Candidates for the degree in this department will be required to present satisfactory evidence of having had at least eight months experience in metallurgical work.

11. Forms of application, the time-table of the September examination, and further particulars may be had upon application to the Department of Education.

II. ADMISSION.

A candidate for admission must have completed the seventeenth year of his age on or before the first of October of the year in which he seeks to enter.

Applications for admission must be made on blank forms supplied by the Registrar, and should be forwarded early in September.

Applications will be considered from (*a*) those who have completed matriculation, including those who hold certificates recognized as equivalent —see matriculation curriculum—, (*b*) those who have failed in not more than two papers of the matriculation examination. The latter must complete matriculation before being eligible to enter the second year.

Applications based upon other certificates than those mentioned will be considered as occasion may require. Such certificates must be accompanied by an official statement of the marks in the various subjects upon which the certificate was granted.

ADMISSION AD EUNDEM STATUM.

An undergraduate of another University may be admitted *ad eundem statum* on such conditions as the Senate on the recommendation of the Council of the Faculty may prescribe.

An applicant for admission *ad eundem statum* must submit with his petition (1) a calendar of his University giving a full statement of the courses of instruction; (2) an official certificate of character and academic standing.

III. REGISTRATION.

Registration in the various years will begin Sept. 1st. Blank cards for the purpose will be supplied by the Secretary on request.

IV. FEES.

All fees are payable at the Bursar's office between the hours 10 a.m. and 1 p.m. of each week day except Saturday.

The annual fees including tuition, library, laboratory supplies and one annual examination shall be as follows:—

First Year.

If paid in full on or before November 5th	$100.00
By instalments:	
First instalment, if paid on or before November 5th	50.00
Second instalment, if paid on or before February 5th	55.00

Second Year.

If paid in full on or before November 5th	110.00
By instalments:	
First instalment, if paid on or before November 5th	55.00
Second instalment, if paid on or before February 5th	60.00

Third and Fourth Years.

If paid in full on or before November 5th	120.00
By instalments:	
First instalment, if paid on or before November 5th	60.00
Second instalment, if paid on or before February 5th	65.00

Repeating the Year.

If paid in full on or before November 5th	50.00

The above fees are payable in advance. After November 5th a penalty of $1.00 per month will be imposed until the whole amount is paid. In the case of payment by instalments the same rule as to penalty will apply.

Students desiring to pay in instalments must have paid the fees due in the first term before proceeding to the work of the second term.

General Fees.

Matriculation, or registration of Matriculation	$5.00
Supplemental examination	10.00
Admission ad eundem statum	10.00
Degree of B.A.Sc. (Payable not later than April 1st)	10.00

Dues and Deposits.

(Payable to the Secretary of the Faculty at the time of registration.)

Engineering Society membership	$1.00
Annual deposit	2.00

Charges for waste, neglect and breakage are to be met out of the deposit fee, the balance of which will be refunded to the student at the end of the session.

GENERAL INFORMATION FOR STUDENTS.

Discipline.

The Council of University College, and the governing bodies of the federated universities and colleges, respectively, have disciplinary jurisdiction over and entire responsibility for the conduct of their students in respect of all matters arising or occurring in or upon their respective college buildings and grounds, including residences.

The councils of such of the faculties as have assigned for their separate use any building or buildings and grounds, including residences, have disciplinary jurisdiction over and entire responsibility for the conduct of all students in their respective faculties in respect of all matters arising or occurring in or upon such building, or building and grounds

In all such cases, and, save as aforesaid, as respects all students to whatsoever college or faculty they may belong, disciplinary jurisdiction is vested in the Caput, but the Caput may delegate its authority in any particular case or by any general regulation to the council or other governing body of the university or college or faculty to which the student belongs.

The Caput has also power and authority to determine by general regulations, or otherwise, to what college, faculty or other body the control of university associations belongs.

If there be any question as to the proper body to exercise jurisdiction in any matter of discipline which may arise, the same shall be determined by the Caput, whose decision shall be final.

Disciplinary jurisdiction includes the power to impose fines.

REGULATIONS RESPECTING STUDENTS.

No student will be enrolled in any year, or be allowed to continue in attendance ,whose presence for any cause is deemed by the Council to be prejudicial to the interests of the University.

All interference on the part of any student with the personal liberty of another, by arresting him, or summoning him to appear before any tribunal of students, or otherwise subjecting him to any indignity or personal violence, is forbidden by the Council. In particular, students of all Faculties are warned against the practices known as the "hustling" of freshmen and against inter-year or inter-faculty "hustles." Any student convicted of participation in such proceedings will render himself liable to expulsion from the University.

All students shall be in attendance during the whole of each term. Those whose attendance or work is reported as unsatisfactory are liable to dismissal by the Council.

No student will be allowed to repeat the work of any year more than once.

Information as to the text books, instruments and materials to be purchased by the students will be given on registration at the beginning of the session.

OPTIONS.

In departments 1, 2, 3 and 7 of the first and second years, students have the option of taking either French or German. The selection made for the first year must be continued during the second year.

In department 1 of the third year in addition to the regular subjects, Biology will be required of those who intend to follow Sanitary work in the fourth year.

In department 5, second year an option is permitted between Biology and Calculus as the student, upon consultation with the head of the department in Chemistry, may decide.

In the fourth year, optional courses are arranged in certain departments. Students are required to submit their selection to the Secretary in writing, not later than September 15th. The proposed selection must be approved by Council before adoption.

REGULATIONS RESPECTING EXAMINATIONS.

Regular Examinations.

A student who in either term of the session, fails to perform the work of his course in a manner satisfactory to the professors in charge, will not be allowed to present himself at the final examinations of the year.

Candidates are required to send to the Secretary of the Faculty at least three weeks before the commencement of the Annual Examinations in April, notice in writing of their intention to take such examinations. A penalty of $1.00 will be imposed upon all candidates who fail to give notice within the proper time.

In the second, third and fourth years Annual Examinations will be held at the beginning of the second term on all subjects completed during the first term.

No student will be allowed to write at the Annual Examinations who has not paid all fees and dues for which he is liable.

The minimum percentage of marks required to pass in the written examinations will be fixed from time to time by the Council.

The minimum percentage of marks required to pass in the practical work connected with any subject shall be one and one-half times the minimum required in the case of a written examination.

In order to pass the practical examinations in the subjects of applied mechanics, descriptive geometry, electrical design, optics, surveying and architecture, the drawings set in these subjects must be made.

Candidates who fail in passing the Annual Examinations will be required to take again the whole course of instruction, both theoretical and practical, of the year in which they fail before presenting themselves a second time for examination.

Term Examinations.

In the first year only, term examinations in four subjects will be held on the last two days of the first term.

The subjects will not be announced until the day previous to the first examination.

The results of these examinations will be incorporated with those of the Annual Examinations in the same subjects in the ratio of 1 to 2.

Supplemental Examinations.

A candidate who fails in one or two subjects at the annual examinations, will be required to take supplemental examinations in such subjects.

The supplemental written examinations will begin on the 18th of September, 1912.

Candidates are required to send to the Secretary of the Faculty at least two weeks before the commencement of the Supplemental Examinations in September, notice in writing of their intention to take such examinations, and to remit to the Bursar the fee of $10.00.

In the case where a candidate fails to pass a supplemental examination it will count as one of the two supplemental examinations which may be allowed him after the next annual examination.

Vacation Work.

Vacation work must be handed in, on or before the first day of the session.

Vacation notes must be on construction only, except in Department 2 (see p. 72), and contain not less than twenty, nor more than thirty pages of sketches. These sketches must be free-hand pencil drawings with figured dimensions.

Notes must be made in standard note books approved of by the Faculty. Notes which have been taken during the session in connection with the work in drawing will not count as vacation work.

The minimum percentage of marks required for practical work must be made in the case of vacation notes.

Shop Work.

Students in Mechanical and Electrical Engineering are not considered as having completed their course of study, nor are Degrees granted, until certificates have been submitted to the Council, and accepted as satisfactory, showing not less than eight months of mechanical experience in production of some kind under commercial conditions. Preferably the work undertaken should be in one of the manufacturing industries or trades with which the Course is related.

It is not desirable that any student in these Courses should enter sales or other non-production departments of the engineering industries without having acquired some personal experience in mechanical production. It is best to obtain this experience under commercial conditions. Otherwise one can not at all appreciate shop conditions and limitations.

Honours.

Honours will be granted in each department to the students who pass in all the subjects and obtain at least 66 per cent. of the total number of marks allotted to the department at the annual examinations.

Papers read before the Engineering Society may be considered in granting Honours.

REGULATIONS RESPECTING TERM WORK.

Students working in any laboratory must be governed by the regulations relating thereto as made known from time to time.

No laboratory reports or drawings may be removed from the laboratories without permission. The Council reserves the right to dispose of them as may be thought proper.

Field Work.

No field notes will be counted which have not been taken in the field, and during the hours allotted to such work.

Students taking practical astronomy are required to take observations in the field for time, latitude, and azimuth.

Drafting Rooms.

Drawings prescribed for the first term of the session will not be counted unless finished in that term.

The minimum number of drawings shall be twenty-five, and the maximum number thirty-five, except in the Department of Analytical and Applied Chemistry, in which the number shall be fifteen and twenty-five respectively.

No drawings will be counted which have not been made in the drafting rooms, and during the hours allotted to such work.

Theses.

In the Fourth Year each student is required to prepare a thesis on a subject approved by the Council. The title of the thesis must be sent to the Secretary of the Faculty for approval on or before November 1st, and the completed thesis must be handed in not later than the first day of the second term and shall become the property of the University. The rules governing size, form, etc., may be obtained on application to the Secretary.

EXEMPTIONS.

Applications for exemption from any of the regulations must be made to the Council in writing and the particulars of the case fully stated.

1. DEPARTMENT OF CIVIL ENGINEERING.

The courses of study in Civil Engineering are designed to give the student a sound training in the fundamental scientific principles on which the practice of the profession is based. The instruction is given by means of lectures and practical work in the field, the drafting room and the laboratory. In this way the student is led to apply the principles developed in the class room.

Formerly the term Civil Engineering included all the branches of the profession, but some of these became so extensive as to require distinctive names and fields of work for themselves. Even yet Civil Engineering is so comprehensive as to render it impossible for anyone to master all its branches. It may be said to include surveying and topography; works connected with transportation, such as railroads and canals; municipal works, such as waterworks, sewers, streets and pavements; hydraulic works, such as power development, drainage, irrigation, etc.; structural works, such as bridges, roofs, etc.

Notwithstanding the variety of the branches of Civil Engineering above enumerated, they are underlaid by a comparatively compact body of scientific principles which form the basis of the work of instruction. While the subjects of the first year are largely fundamental, an effort is made, to give a professional aspect to the student's work from the very beginning. This is accomplished by the introduction of such subjects as field work and plotting in the curriculum of the first year. In the second and third years the study of fundamental science is continued together with its application to the solution of engineering problems. In the fourth year the student may elect to follow certain optional subjects which form a continuation of the work of the previous years. Here special stress is laid upon experimental work in the laboratory.

2. DEPARTMENT OF MINING ENGINEERING.

The course in Mining Engineering is intended to serve as a preliminary training for those who expect to practice the art of mining or metallurgy. In the first two years it differs very little from the course in civil engineering, in the third year some subjects peculiar to mining and metallurgy are taken up. In the fourth year the subjects are more particularly those of mining and metallurgy. By the choice of subjects for thesis in the fourth year the student can follow his particular branch still further, and devote about one-quarter of the time in that year to the part of the studies which interests him most.

In general this course is designed to first give the student a good training in the parts of engineering essential to all branches such as surveying, drafting, etc., and then in the upper years to allow him to follow studies peculiar to mining engineering.

Candidates for the degree in this department will be required to present satisfactory evidence of having had at least six months 'practical experience in work connected with mining, metallurgy or geology, for which they must have received regular wages. Certificate forms, giving full details as to acceptable classes of work, will be furnished on application and should be obtained by all students before entering employment.

3. DEPARTMENT OF MECHANICAL ENGINEERING.

The course in this Department is designed to meet the needs of those students who are intending to take up the work connected with Mechanical Engineering such as: the design of gas engines, steam engines, steam boilers, steam turbines, air compressors, etc.; the design and installation of the machinery connected with power plants and central stations, steam piping and other similar problems. The work is also so arranged that the student becomes somewhat familiar with the design of travelling cranes and mill buildings and similar problems connected with structural steel work.

Since the work of the mechanical engineer and of the electrical engineer are closely allied, the courses in these two departments in the first two years are identical and cover the subjects mentioned below.

In the third year the work becomes more specialized, the mechanical engineers paying more attention to heat engines of various types, and to mill building design and other work of similar nature. The study of electricity is continued and the student gets considerable practice in the mechanical and electrical laboratories.

In the fourth year the student devotes himself still more closely to his chosen work, placing the greater stress on thermodynamics and the theory and testing of heat engines, and problems in machine design. Much time is spent in the mechanical laboratories testing gas and steam engines and other machines. A portion of the time is devoted to electricity and the laboratory connected therewith.

Candidates for the degree in this department are required to present satisfactory evidence of having had at least eight months' practical experience in one of the principal trades connected with Mechanical Engineering, the object being that graduates may have some practical knowledge of the duties of the workman in this branch of engineering, as distinguished from those of the purely technical man. Certificate forms will be furnished on application. These forms contain full details in regard to the work required.

4. DEPARTMENT OF ARCHITECTURE.

The instruction in this department is arranged to lay a broad foundation for the subsequent professional life of its graduates, and incidentally to prepare its students to be immediately useful in an architect's office. The curriculum has been arranged to meet the æsthetic and scientific needs of the profession, and includes History and Principles of Architecture, Free-hand Drawing in pencil, ink and color, Architectural Design, Analysis and Criticism of Buildings, Mathematics, Statics, Strength and Elasticity of Materials, Theory of Construction and Heating and Ventilation.

The equipment of the department includes a working library of 1,000 volumes, a large file of periodicals, 2,500 photographs, 2,000 stereographic photos, 4,500 lantern slides, and a large collection of models and casts.

7. DEPARTMENT OF ELECTRICAL ENGINEERING.

The course in Electrical Engineering is arranged to provide preliminary training for those who would follow any of the various lines of activity connected with electrical industry.

The first two years of the course are devoted to fundamental scientific principles, and incidentally more or less of their application to engineering problems in mechanical, civil, and electrical work. Many problems are solved in the drafting rooms by graphical methods. The third year includes further theoretical work, more particular attention being given to electrical and mechanical studies in theory, operation, and design. The fourth year is devoted to advanced work in alternating current theory and practise combinedwith similar study in thermodynamics or hydraulics.

A large amount of laboratory practise is provided, most of which belongs to the third and fourth years. In this last year most of the time is spent in laboratory investigations and studies resulting therefrom.

Candidates for the degree in this department will be required to present satisfactory evidence of having had at least eight months' mechanical experience in one of the principal trades connected with Electrical Engineering, the object being that graduates may have some practical knowledge of the duties of the workman in this branch of engineering as distinguished from those of the purely technical man. Certificate forms will be furnished on application. These forms contain full details in regard to the work required.

OUTLINE OF COURSES OF INSTRUCTION.

APPLIED MECHANICS.

10. Statics:—Departments 1, 2, 3, 4, 6 and 7, I Year; 2 hours per week; both terms.

This course of lectures deals with forces in a single plane, and concerns chiefly the calculation of tension, compression and shearing stresses in frame structures and solid beams. It also deals with the consideration of problems relating to friction.

11. Dynamics:—Departments 1, 2, 3, 4, 6 and 7, I Year; 2 hours per week; both terms.

Kinematics and dynamics of rigid bodies, motion of translation, acceleration, graphics, the laws of motion, impulse and momentum, work and energy, power of pumps, etc.

Text book:—Tutorial Dynamics—Briggs and Bryan.

12. Dynamics of Rotation:—Departments 1, 2, 3, 6 and 7, II Year; 1 hour per week; both terms.

Angular motion, velocity and acceleration, moment of inertia, simple harmonic motion, the pendulum, centres of mass, suspension and percussion, the phenomena of rotating bodies with special reference to such as fly wheels, governors, etc.

Text book:—Dynamics of Rotation—Worthington.

13. Strength of Materials:—Departments 1, 2, 3, 4, 6 and 7, II Year; 2 hours per week; both terms.

In this course, the strength and elasticity of materials are mathematically treated. The stresses in such elements of structures as the tie rod, the beam, the strut and the member subjected to shear are investigated and the elementary principles of design established. In the lecture and drafting rooms through numerous problems involving the design of simple beams, columns, rivetted connections, etc., these principles are exemplified. The work includes also the discussion of eccentric loading, suddenly applied loads and repeated stresses.

Reference Book:—Mechanics of Materials, Merriman.

14. STRENGTH AND ELASTICITY OF MATERIALS:—Departments 1, 3 and 4, III Year; 1 hour per week; one term.

This course is intended to give the student an introduction to the experimental study of the strength and elasticity of materials. It is intended that he shall acquire some familiarity with the construction and operation of testing machines and with the properties of the ordinary building materials.

Reference Book:—Laboratory Instructions, Department of Applied Mechanics U. of T. 1911.

16. THEORY OF STRUCTURES:—Departments 1, and 3, IV Year; 2 hours per week; both terms.

The work taken up in this course of lectures consists in swing bridges, arches, suspension bridges and some special features in column construction. Some examples of the above structures will be designed in the class and carried out in further detail in the drafting room.

Reference Book:—Modern Framed Structures—Johnson.

17. STRENGTH AND ELASTICITY OF MATERIALS :—Departments 1, 3 and 4, IV Year; a laboratory course of about 11 hours per week.

This course of experiments is intended to give the student practice in investigating the elastic and physical properties of iron, steel, concrete, timber and other building materials.

Reference Book:—Materials of Construction—Johnson.

18. THEORY OF STRUCTURES:—Department 1, III Year; 2 hours per week; both terms.

In the first term, the theory relating to the design of box and plate girders is covered fully, and the complete design of a plate girder span is worked out in the class and drafting rooms.

The second term is given chiefly to the design of a riveted truss highway span and a rivetted truss railway span, the complete designs being made in the lecture and drafting rooms. Restrained, continuous and trussed beams complete the term's work.

19. THEORY OF STRUCTURES:—Departments 2, 3, 4, and 6, III Year; 2 hours per week; first term.

The work is practically the same as that for Department 1 in the first term except that a building girder is designed instead of a plate girder bridge span, and that restrained, continuous and trussed beams are discussed at the end of the term.

Text books:—Modern Framed Structures—Johnson, Bryan and Turneaure; Roofs and Bridges, Part III, Bridge Design—Merriman and Jacoby; Carnegie Pocket Companion; Cambria Steel.

20. FOUNDATIONS, RETAINING WALLS AND DAMS.

Required in Department 1, IV Year; 1 hour per week; both terms.

This course of lectures is devoted to the design of the structures mentioned. Preparatory to the discussion of the practical aspects of the subject, and in order to gain familiarity with the fundamental principles involved, a part of the first term is given over to the consideration of the theory of compound stress. The most approved forms of construction of retaining walls, footings, abutments, piers and dams are then described, and typical designs are worked out in the class and drafting rooms.

Text books and books of reference:—Retaining Walls for Earth—M. A. Howe; Walls, Bins and Grain Elevators—M. S. Ketchum; A Treatise on Masonry Construction—I. O. Baker; Design and Construction of Dams—E. Wegmann.

21. CEMENTS AND CONCRETE :—Departments 1 and 4; III Year; 1 hour per week; second term.

The manufacture, testing and use of Portland Cement, and the elementary theory of reinforced concrete are discussed in this course of lectures.

22. REINFORCED CONCRETE:—Departments 1 and 4, IV Year; 1 hour per week.

The theory of the strength of reinforced concrete elements including the beam, the slab, the T-beam and the column, is continued in this course.

The analysis of the monolithic arch by the elastic theory is discussed and the student is required in the drafting room to apply his knowledge to the design of simple structures.

Reference books:—Principles of Reinforced Concrete Construction—Turneaure and Maurer; Concrete, Plain and Reinforced,—Taylor and Thompson.

23. STEEL AND IRON.

Optional in Year IV.

In this course of lectures are discussed the relations between the composition of steels and irons and their physical properties. The effects of heat treatment and the constitution and structure as revealed by the microscope, are studied. The subjects taken up in Year III. are continued.

24. MILL BUILDING DESIGN:—Departments 1 (*Structural Engineering Option*), 3 and 4 (*Architectural Engineering Option*), IV Year; 1 hour per week; both terms.

The structural problems involved in the design of steel mill buildings are discussed in this course of lectures. Types of buildings, various styles of trusses, columns and details are described and the complete design of a steel mill building is worked out in the class and drafting rooms.

Text book:—Mill Building Design—Milo S. Ketchum.

MACHINERY.

25. THEORY OF MECHANISM:—Departments 3 and 7, II Year; 2 hours per week; both terms.

This course of lectures treats of the motions of machines, the latter being assumed to be of sufficient strength to resist acting forces. The formation of machines is dealt with in a general way and investigations of the velocities of points and links are made. The design of gear teeth and the application of trains of gears are taken up, also problems in static equilibrium.

Problems are worked out in the drafting room in which the methods given are employed.

26. MECHANICS OF MACHINERY:—Departments 3 and 7, III Year; 3 hours per week; one term.

In this course the questions dealt with are the construction of acceleration diagrams, the determination of the accelerations of various parts of machines, the kinetic energy of machines, the effect of the weights and accelerations of parts on the velocity of the flywheel and the proper weight of the latter to fulfil given conditions. The theory of various forms of governors is also fully taken up and the efficiency of machines. The discussion of the design of slide valves and gears is continued in this course.

Text books:—Slide Valve Gears—Halsey.

27. MACHINE DESIGN:—Departments 3, 6. 7, III Year; 1 hour per week; both terms.

The lectures in this course deal principally with the applications of the principles of kinematics and the theory of the strength of materials to the design of machine parts, such as shafting, gearing, journals, clutches, etc.

In addition to the lecture course a considerable amount of time is spent in the drafting room where designs involving the above principles are worked out and the necessary calculations made. These designs are made as parts of some actual machine, such as an engine.

28. MACHINE DESIGN:—Department 3, IV Year.

The lectures and practical work in this course are meant to supplemental those of course 25 and deal with more difficult problems and designs. The design of a complete machine is taken up and detail drawings as well as an assembly drawing are made.

HYDRAULICS.

29. HYDRAULICS—GENERAL COURSE:—Departments 1, 2, 3 and 7, III Year; Department 6, IV Year; 2 hours per week.

This is an introductory course of lectures in hydraulics and is devoted to the development and discussion of fundamental formulæ relating to the flow of water in pipes, the measurement of discharge by various methods, such as orifice and weirs, the conditions of flow obtaining in open channels, artificial and natural, and in pipes flowing partially full; together with other kindred subjects.

The object of this course is to provide the student with a good working knowledge of the fundamental principle of hydraulics; such as is useful in practical work, and is necessary to the intelligent investigation of more advanced problems, such as the design of turbines, water wheels and power plants generally.

30. HYDRAULIC LABORATORY:—Departments 1, 2. 3 and 7, III Year; 3 hours per week; one term.

The work in this course is intended to illustrate the lecture course given in hydraulics and to give the student some working acquaintance with the formulas and coefficients met with in practice. Experiments are made on the coefficients of velocity and discharge for orifices of different shapes and sizes and for weirs. The coefficients obtained are used with orifices and weirs in measuring the discharge through meters, nozzles, etc., which are next under examination. Experiments on the friction of water in pipes and fire hose and in elbows and bends are also made, and the friction factors and coefficients of friction are determined.

31. HYDRAULICS:—Departments 1, 3 and 7, IV Year; 2 hours per week; both terms.

Following up the third year course in this subject the theory already acquired is applied to the solution of problems connected with branched pipes, water mains discharging at

various points along their length, the effect of a dam on the water level at any point on a stream and numerous other problems.

The most important question considered and to which most of the lectures are devoted is the theory of turbines and centrifugal pumps, the effect of the design on the speed, discharge, power and efficiency being fully taken up.

Text books:—Hydraulic Motors, etc.—Bodmer; Centrifugal Pumps—Innes; Hydraulics—Merriman.

32. HYDRAULICS:—Departments 1, 3 and 7, IV Year; about 11 hours per week.

A laboratory course devoted to experimental work on turbines of various types and centrifugal and turbine pumps and other similar devices. This experimental work is arranged to illustrate the lectures on turbine and pump design. The experiments are made on two large turbine pumps used in the laboratory supply, as well as on apparatus specially designed for instruction.

Various methods of measuring water power and the efficiency of machines are also given.

32a. POWER:—Departments 2 and 6, IV Year.

A laboratory course of six experiments on pumps, turbines, weirs, orifices, etc.

HEAT ENGINES.

33. THERMODYNAMICS:—Departments 3, 6 and 7, III Year; Department, 1, IV Year; about 2 hours per week.

A lecture and laboratory course in which the subject is treated in such a way as to make it of practical value and give a working acquaintance with the principles on which it is based. After the elementary ideas have been given and the proofs of the properties of Carnot's cycle, applications of the subject are made to the perfect gas and to saturated steam and to the various types of engines. Temperatures are taken from the air thermometer.

34. THERMODYNAMICS:—Department 2, IV Year; 1 lecture per week; both terms.

This course is especially designed to give the Mining Engineer a working knowledge of thermodynamics as applied to the perfect gas so that he will be able to understand clearly the action of air compressors, etc. After deducing general principles, the efficiency of compressed air transmission and the relative merits of different types of compressors is discussed.

35. Thermodynamic and Mechanical Laboratory:—Departments 3 and 7, III Year; 3 hours per week; second term.

This laboratory course is designed to assist in a clearer understanding of thermodynamics, machine design and mechanics of machinery. The work in thermodynamics consists in the setting of slide valves, indicating engines measuring the brake horse power, simple engine and boiler tests and the testing of gas and gasoline engines under various conditions. The mechanical laboratory work deals with the efficiency of belts and ropes as well as of several machines of simple construction. An examination of lubricating oils is also made by means of oil testing machines and other well-known devices. Experiments are also made on the balancing of reciprocating and rotating masses.

36. Thermodynamics:—Departments 3 and 7, IV Year; about 3 hours per week; both terms.

This is a continuation of the introductory course, the subject being here treated from a general standpoint and the idea of entropy and of the absolute scale of temperatures being introduced. The course includes the treatment of saturated and superheated vapours, gases, the flow of fluids, chimney and boiler efficiency and the theory of various engines and other appliances including air compressors, refrigerating machines, injectors and the various forms of link motions and radial valve gears.

Text books:—Thermodynamics—Peabody; Steam Tables—Peabody.

37. Thermodynamics:—Departments 3 and 7, IV Year; about 10 hours per week.

The work in this year is a continuation and extension of the work covered in the third year laboratory course. Careful tests are made of engines of various types such as simple, tandem, and cross-compound steam engines; steam turbines; refrigerating machines; air engine; injectors and steam pumps, etc.; and an application is made of Hirn's Analysis and the entropy diagram to the results obtained. A complete set of experiments is made on each machine and the result plotted so as to show clearly to the student the effect of various alterations in the adjustment of the engine on the resulting efficiency.

Several modern gas and gasoline engines and a gas producer give ample opportunity for the study of this type of engine, and facilities are provided for sampling the gas supply and exhaust

Two experimental stacks and three boilers enable results to be obtained on boiler efficiency and chimney draft.

38. STEAM ENGINES:—Departments 3 and 7, II Year; one hour per week; one term.

This course of lectures includes a discussion of the principles of action of the steam engine; also the theory and design of various simple froms of valve gears used in the operation of such engines.

A short course is given in the mechanical laboratories in connection with the above lectures which illustrates the principles of valves and valve gears.

39. HEAT ENGINES:—Departments 3, 6 and 7, III Year; one hour per week, both terms.

This course in heat engines is intended for students in Mechanical Engineering, to be supplementary to the general course of lectures in thermodynamics given in the third year.

The principal commercial forms of heat engines are dealt with in a more or less descriptive manner; special attention is given to considerations affecting the design of the ordinary forms of steam engines, gas engines and oil engines.

39a. POWER.—Departments 2 and 6, IV Year.

A course of six experiments with steam and gas engines, compressed air, etc.

ARCHITECTURE.

40. HISTORY OF ARCHITECTURE:—Department 4, I Year; one hour per week; both terms.

In this course the development of architecture is treated very briefly and in an elementary manner, from the Pyramids of Egypt to the present, laying special emphasis on the Egyptian, Grecian and Western Asiatic work. The antique Greek and Roman orders are studied and the students are required to make rendered drawings in the studio of certain orders and elements. An attempt is made to develop the student's sense of proportion and in the latter part of the second term he is required to study a simple problem in design.

41. HISTORY OF ARCHITECTURE:—Department 4, II Year; one hour per week; both terms.

The Classical, Early Christian, Byzantine and Romanesque styles of architecture are studied with the aid of the lantern. The student is required to become acquainted with the best examples in these styles in order that his sense of proportion and his taste may be developed and his knowledge of the different elements extended.

42. History of Architecture:—Department 4, III Year; one hour per week; both terms.

In this course the work of the previous year is continued, with the study of Gothic and the Renaissance.

43. History of Ornament:—Department 4, II Year; one hour per week;. both terms.

In this course the development of Ornament is traced from the beginning through Egyptian, Assyrian, Grecian, Roman, Byzantine, Romanesque and Moresque styles. An attempt is made to analyze ornament of the best periods and to systematize the principles followed in form and color. The development and types of mouldings are also studied.

44. History of Ornament:—Department 4, III Year; one hour per week; both terms.

A continuation of the course in Ornament given to the Second Year. Instruction is given in lectures with the aid of the stereoptican. The students are required to become familiar with the characteristics and forms of the ornament used in the Gothic and Renaissance styles.

45. Orders of Architecture:—Department 4, II Year; one hour per week; both terms.

Lectures on the Five Orders of Architecture, their affiliated forms and the other elements used in design. Simple problems in elementary design involving the use of the orders and other elements are set from time to time.

46. Architectural Design:—Department 4, II Year; one hour per week; both terms.

This course is given by means of individual instruction in the class room by criticisms of the solutions of different problems set during the year and by a series of lectures. It is in this course that the student begins the serious study of design; continued practice in architectural drawing and rendering afford the training necessary to make the student a proficient draughtsman.

47. Architectural Design:—Department 4, III Year.

Theory and practice of Design.

This course is given by individual instruction in the studio and by lectures. The greater part of the course is devoted to problems in design and forms a continuation of the course given in the preceding year.

48. ARCHITECTURAL DESIGN:—Department 4, IV Year.

The entire course is devoted to advanced academic training in designing the more monumental classes of buildings. The student is required to design and submit sketches and working drawings of some subject to be selected by himself.

48A. ARCHITECTURAL DESIGN:—Department 4, IV Year; Architectural Engineering Option.

A short course of lectures and studio work referring especially to the artistic side of the design of commercial buildings.

49. BUILDING MEASUREMENT:—Department 4, I Year; 1 hour per week; both terms.

In this course of lectures the principles of measurements and mensuration with special reference to buildings will be discussed. With this is combined 4½ hours per week practice in measurements of existing buildings, quantities, etc.

50. BUILDING MATERIALS:—Department 4, III Year; 2 hours per week; both terms.

The structural and aesthetic value of the various building materials.

51. STRUCTURAL DESIGN OF BUILDINGS:—Departments 1 (*Structural Engineering Option*), and 4 (*Architectural Engineering Option*); IV Year; 2 hours per week first term; and one hour per week second term.

The structural features of buildings of timber, steel and reinforced concrete construction are thoroughly discussed in this course of lectures. In the first term, detailed attention is given to the design of ordinary floor slabs and arches, beams, girders, columns and footings. The second term is devoted to irregular framing, eccentrically loaded columns, special footings, deep foundations, wind bracing and the more unusual problems of structural practice. In both terms, portions of typical buildings are designed in the class and drafting rooms.

51A. STRUCTURAL DESIGN OF BUILDINGS:—Department 4, IV Year; two hours per week; first term.

This course is the same as that given in the first term to Department 1, Structural Engineering Option and Department 4, Architectural Engineering Option.

Text books:—Architectural Engineering—J. K. Freitag; Steel Construction—E. A. Tucker, Carnegie Pocket Companion; Cambria Steel.

52. SANITARY SCIENCE:—Department 4, IV Year; 1 hour per week; both terms.

Modern plumbing, its design and installation.

53. HEATING AND VENTILATION:—Department 4, IV Year; 1 hour per week; both terms.

The design of different systems, where they should be used, heating specifications, etc.

54. MODELLING:—Department 4, I, II, III and IV Years.

ASTRONOMY AND GEODESY.

55. ASTRONOMY, ELEMENTARY:—Department 1, II Year; 1 hour per week; both terms.

A course in descriptive Astronomy, explaining the ordinary astronomical terms, and describing the various celestial bodies and their motions. In the evenings opportunity will be given for identifying the stars and for observing with telescopes.

Text book:—Introduction to Astronomy—F. R. Moulton.

56. ASTRONOMY AND GEODESY:—Department 1, III Year; 2 hours per week.

The course of lectures deals with the determination of time, latitude, longitude and azimuth, by methods adapted to the use of the surveyor's transit and the sextant. It is designed to fulfil the requirements of the final examinations for Ontario and Dominion Land Surveyors.

In Geodesy an account is given of the principles and methods of a secondary triangulation survey, also of the principles involved in the North-West system of survey.

Text book:—Practical Astronomy as applied to Geodesy and Navigation, Doolittle; Nautical Almanac, 1913.

57. FIELD WORK:—Department 1, III Year; about 1 hour per week; first term.

The practical work in this subject comprises observations in the field with the transit and sextant for the determination of time, latitude and azimuth by the methods described in the lectures.

58. ASTRONOMY (Advanced):—Department 1, IV Year; 2 hours per week.

The lecture course in this subject comprises the theory and adjustment of the instruments used in connection with a geodetic survey; the methods of taking and reducing observations for time, longitude, latitude, and azimuth, with the precision required on such a survey; and other matters relating to these subjects.

59. GEODESY AND METROLOGY:—Department 1, IV Year; 2 hours per week.
The lecture course includes a description of the methods of measuring base lines, and the angles of a triangulation; the geometry of the spheroid with applications to geodetic problems; the computation of geodetic positions; the solution of large triangles on the earth's surface, and the adjustment of a triangulation; trigonometric and precise spirit levelling; the determination of the figure of the earth by arc measurements, and by the pendulum; the theory of map projections, etc.

60. ASTRONOMY, GEODESY AND METROLOGY:—Department 1, IV Year; about 23 hours per week.
The practical work in the above subjects includes the observation of meridian transits for time and longitude determinations, and of prime vertical transits for latitude, with the astronomical transit instrument; the observation of meridian zenith distances of stars, and of azimuths at elongation for latitude, with the alt-azimuth; theodolite observations for azimuth; observations for latitude with the zenith telescope; the investigation of the constants of the instruments used, and the reduction of all observations; the measurement of a base line with the steel tape, and the determination of the constants of the tape; the measurement of the angles of a triangulation and the adjustment of the angles of a network of triangles, etc.

BIOLOGY.

61. ELEMENTARY BIOLOGY:—Department 5, I Year; optional in Department 1, III Year; 2 hours per week; both terms.
A course of two lectures a week throughout the session is designed as an introduction of the whole range of biological studies. After a sketch of the scope and objects of these, the lectures will treat (*a*) of the fundamental principles of biology, as illustrated by the simplest animals and plants; (*b*) of typical forms of higher plants in ascending order; (*c*) of typical forms of animals in a similar way; and (*d*) of the structure and functions of the human body. Students are recommended to make use of the Biological Museum in connection with this course of lectures. For reference; Jeffrey Parker, Elementary Biology; Ramsay Wright, High School Zoology; Atkinson, Elementary Botany; Huxley, Lessons in Elementary Physiology.

62. ELEMENTARY BIOLOGY:—Department 5, I Year; 3 hours per week; both terms.

An elementary course of laboratory work on the general structure and identification of plants and animals, and the use of the microscope in the examination of tissues and products.

63. ADVANCED BIOLOGY:—Department 5, II Year.

A course of instruction in the Morphology and Physiology of Bacteria, Moulds and Yeast Fungi.

64. BACTERIOLOGY:—Departments 5 and 6, IV Year; a lecture and laboratory course of 8 hours per week; second term, on elementary bacteriology.

BUSINESS.

65. ACCOUNTING:—All Departments, I Year; 1 hour per week; both terms.

The principles of accounting; illustrated by typical accounts.

66. BANKING AND FINANCE:—All Departments, II Year; 1 hour per week; both terms.

Money and the instruments of credit; bond issues, loans, sinking funds, etc.

67. LIMITED COMPANIES:—All Departments, III Year; 1 hour per week; both terms.

Partnerships; the history and development of the limited liability company; the Companies Acts; Company finance.

68. CONTRACTS AND SPECIFICATIONS:—Departments 1 and 4, IV Year; 1 hour per week; both terms.

This course of lectures deals with the fundamental principles of contract and specification writing. The critical examination of typical specifications and agreements by the class forms an essential feature of the instruction.

69. COST-KEEPING, ETC.:—Departments 2, 3, 5, 6, and 7, IV Year.

Works management, accounts, analysis of costs, reports.

CHEMISTRY.

75. ELEMENTARY CHEMISTRY:—All Departments I Year; 2 hours per week; both terms.

A lecture course in elementary chemistry dealing with the metals and non-metals with experimental illustrations.

76. ELEMENTARY CHEMISTRY:—Departments 2 and 6, I Year; 3 hours per week; second term.

A laboratory course to illustrate the use of the sensitive balance, to verify some of the laws which form the basis of the science, and to serve as an introduction to quantitative laboratory methods. Instruction given as required before each period.

77. INORGANIC CHEMISTRY:—Departments 5 and 6, I Year ; 1 hour per week; both terms.

A lecture course on the elements and important inorganic compounds, supplementing course 75.

Text book:—Introduction to General Inorganic Chemistry—Alex. Smith.

78. INORGANIC CHEMISTRY:—Department 5, I Year; about 17 hours per week; both terms.

A laboratory course of quantitative experiments illustrating the use of the sensitive balance, and confirming the fundamental laws of chemistry; qualitative inorganic analysis; quantitative analysis of pure salts; inorganic preparations; molar weight determinations.

Text book:—Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

79. INORGANIC CHEMISTRY:—Departments 2, 5 and 6, II Year; 1 hour per week; first term.

A lecture course on the chemistry of the metals; a continuation of course 75.

80. ANALYTICAL CHEMISTRY:—Department 5, II Year; Departments 2 and 6, III Year; 1 hour per week; both terms.

A lecture course on the principles of chemical analysis; select gravimetric and volumetric methods; technical analysis.

81. ANALYTICAL CHEMISTRY:—Departments 1, 2, 3 and 7, II Year; 6 hours per week; one term.

Laboratory practice in elementary qualitative and quantitative analysis.

Text book:—A Smaller Chemical Analysis—Newth.

82. ANALYTICAL CHEMISTRY:—Department 2, II Year; 3 hours per week; both terms.

A laboratory course in the gravimetric determination of metals and acids, with elementary volumetric analysis.

Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

83. ANALYTICAL CHEMISTRY:—Department 5, II Year; 14 hours per week; 17 weeks.

A laboratory course comprising gravimetric and volumetric methods, acidimetry and alkalimetry.

Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

84. ANALYTICAL CHEMISTRY:—Department 6, II Year; 6 hours per week; both terms.

A laboratory course in qualitative and elementary quantitative chemical analysis; inorganic preparations.

Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

85. ENGINEERING CHEMISTRY:—Departments 1, 2, 3, 5, 6 and 7, II Year; 1 hour per week; second term.

A lecture course consisting of a study of the industrial production and application of heat and light, and of the chemistry of fuel and the products of combustion.

86. INDUSTRIAL CHEMISTRY:—Departments 5 and 6, II Year; 1 hour per week; both terms.

A lecture course on the manufacture of salts, acids, alkalies and inorganic chemicals.

Text book:—Inorganic Chemistry—Thorp.

87. ORGANIC CHEMISTRY:—Departments 1, 2, 3 and 7, II Year; 1 hour per week; first term.

A lecture course in elementary organic chemistry.

Text book:—Theoretical Organic Chemistry—Cohen.

88. ORGANIC CHEMISTRY:—Department 5 and 6, II Year; 2 hours per week; both terms.

A lecture course dealing with the aliphatic compounds.

Text book:—Theoretical Organic Chemistry—Cohen.

89. ORGANIC CHEMISTRY:—Department 5, II Year; 14 hours per week; 7 weeks.

A laboratory course in organic preparations in the aliphatic series.

90. PHYSICAL CHEMISTRY:—Departments 5 and 6, II Year; 2 hours per week; both terms.

A course of lectures on the elements of chemical mechanics, and the theory of solutions.

91. ANALYTICAL CHEMISTRY:—Department 5, III Year; 19 hours per week; 16 weeks.

A laboratory course on the technical analysis of iron and steel alloys, ores, furnace products, ceramic materials, foods, gases, fuels, etc.

92. ANALYTICAL CHEMISTRY:—Department 6, III Year. 11 hours per week; first term; 13 hours per week, second term;

A laboratory course in volumetric and technical analysis.

93. ANALYTICAL CHEMISTRY:—Department 2, III Year; 5 hours per week; both terms.

A laboratory course on the technical analysis of ores and furnace products.

94. ENGINEERING CHEMISTRY:—Departments 1, 2, 3, 5, 6 and 7, III Year; Department 4, II Year; 1 hour per week; both terms.

A lecture course on the application of chemistry to engineering problems; air, water, sewage, the materials of construction, explosives, etc.

95. INDUSTRIAL CHEMISTRY:—Departments 5 and 6, III Year; 1 hour per week; both terms.

A lecture course on petroleum and its products, coal tar and its products, the destructive distillation of wood; fats, oils, soap, sugar, starch and gums; fermentation industries, etc.

Text book:—Industrial Chemistry—Thorpe.

96. CHEMICAL PLANT:—Departments 5 and 6, III Year; 1 hour per week; both terms.

A lecture course on the machinery and plant used in chemical manufacturing.

97. ORGANIC CHEMISTRY (A):—Departments 5 and 6, III Year; 2 hours per week; both terms.

A lecture course on the aromatic series.

Text book:—Theoretical Organic Chemistry—Cohen.

98. ORGANIC CHEMISTRY (B):—Departments 5 and 6, III Year; 1 hour per week; second term.

A lecture course on stereoisomerism, desmotropism, etc.

99. ORGANIC CHEMISTRY:—Department 5, III Year; 19 hours per week; 8 weeks.

A laboratory course in organic preparations in the aromatic series; organic analysis.

100. ORGANIC CHEMISTRY:—Department 6, III Year; 17 hours per week; 4 weeks.
A laboratory course in organic preparations.

101. ELECTROCHEMISTRY:—Departments 5, 6 and 7, III Year; 2 hours per week; first term.
A lecture course on elementary electrochemistry, illustrated by experiments.

102. ELECTROCHEMISTRY:—Departments 5, 6 and 7, III Year; 3 hours per week; first term.
A laboratory course in quantitative measurements to accompany course 101.

103. INORGANIC CHEMISTRY:—Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on chemical theory.

104. ORGANIC CHEMISTRY:—Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on advanced organic chemistry.

105. ORGANIC CHEMISTRY:—Departments 5 and 6, IV Year.
A laboratory course in advanced organic chemistry.

106. INDUSTRIAL CHEMISTRY:—Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on selected subjects in chemical technology.

107. INDUSTRIAL CHEMISTRY:—Departments 5 and 6, IV Year; about 28 hours per week; both terms.
A laboratory course in industrial problems.

108. ELECTROCHEMISTRY:—Departments 5, 6 and 7, IV Year; 2 hours per week; both terms.
An advanced lecture course on the theory of solutions and electrolysis, and the application to the practice of electro-deposition and electrolytic refining of metals. The course also includes lectures on the electric furnace with special consideration of efficiency.
Text books:—Electrometallurgy—Borchers; Electrochemistry—Le Blanc; Electrochemistry—Luepke.

109. ELECTROCHEMISTRY:—Departments 5, 6 and 7, IV Year; about 28 hours per week.
A laboratory course accompanying course 108.

110. SANITARY AND FORENSIC CHEMISTRY:—Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on the composition and examination of air, water and food; poisons and their detection.

111. SANITARY AND FORENSIC CHEMISTRY:—Departments 5 and 6, IV Year.
A laboratory course accompanying course 110.

112. ANALYTICAL CHEMISTKY:—Department 2, IV Year, 12 hours per week, flrst term.
A laboratory course comprising analysis of ores and furnace products.

DESCRIPTIVE GEOMETRY AND DRAWING.

115. DESCRIPTIVE GEOMETRY:—Departments 1, 2, 3, 6 and 7, I Year; 1 hour per week; both terms.
This course of lectures deals chiefly with the principles of orthographic and oblique projections and the application of such principles to the solution of problems relating to straight lines and planes.

116. DESCRIPTIVE GEOMETRY:—Department 4, I Year; 1 hour per week; both terms.
This course of lectures deals chiefly with the principles of orthographic and oblique projection and the application of such principles to the solution of problems relating to straight lines and planes, special reference being made to the determination of shades and shadows.

117. DRAWING:—Departments 1 and 2, I Year; about 16 hours per week.
Copying from the flat, lettering, topography; graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; the plotting of original surveys; measured drawings.

118. DRAWING:—Department 4, I Year; about 15 hours per week.
Copying from the flat, lettering, topography, freehand drawing in black and white, both from copies and models; the graphical solution of problems in statics ; problems in descriptive geometry, relating to both orthographic and oblique projections; measured drawings. Elements and principles of Architecture.

119. DRAWING:—Department 5, I Year; about 9 hours per week.
Copying from the flat, lettering, measured drawings.

120. DRAWING:—Departments 3, 6 and 7, I Year; about 20 hours per week.
Copying from the flat, lettering, topography; graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; measured drawings.

121. DESCRIPTIVE GEOMETRY:—Departments 1, 2, 3, 6 and 7, II Year; 1 hour per week; both terms.
This course of lectures is a continuation of the work taken in the first year with the following additions: Problems relating to curved surfaces, principles of shades and shadows, and perspective.

122. DESCRIPTIVE GEOMETRY:—Department 4, II Year; 1 hour per week; both terms.
This course of lectures is a continuation of the work taken in the First Year with the addition of problems relating to curved surfaces, Shades, Shadows, and Perspective.

123. DRAWING:—Departments 1 and 2, II Year; Department 1, about 14 hours per week; Department 2, about 7 hours per week; both terms.
Coloring and shading as applied to both topographical and construction drawings; problems in descriptive geometry relating to solids bounded by curved surfaces; principles of shades, shadows, and perspective; solution of problems in optics and strength of materials; measured drawings; elementary design.

124. DRAWING:—Departments 3 and 7, II Year; about 15 hours per week; both terms.
Coloring and shading as applied to construction drawings; problems in descriptive geometry relating to solids bounded by curved surfaces; principles of shades, shadows, and perspective; solution of problems in optics, theory of mechanism and strength of materials; measured drawings; elementary design.

125. DRAWING:—Department 4, II Year; about 18 hours per week; both terms.
Freehand drawing including monochrome and colors; exercises from the orders of architecture; principles of shades, shadows and perspective; elementary architectural design; problems in descriptive geometry relating to solids bound by curved surfaces; solution of problems in optics and strength of materials; measured drawings.

126. DRAWING:—Department 6, II Year.
Same as Department 3, with exception that theory of mechanism is not included.

127. DESCRIPTIVE GEOMETRY:—Department 1, III Year; 1 hour per week; one term.
This course of lectures deals with spherical projections, the principles of map making, and the graphical solution of spherical triangles.

128. DRAWING:—Department 1, III Year; about 12 hours per week.
Principles of map making, spherical projection, plotting of original surveys relating to topographical and railway work; problems in theory of construction; original design of various structures; measured drawings.

129. DRAWING:—Department 2, III Year; 4½ hours per week.
Plotting of original surveys, relating to topographical and railway work and mining; problems in theory of construction; original design; measured drawings.

130. DRAWING:—Department 4, III Year; about 16 hours per week; first term. 22 hours per week, second term.
Advanced work in monochrome and colors; problems in shades, shadows and perspective; architectural design; problems in theory of construction, including framed structures.

131. DESCRIPTIVE GEOMETRY:—Department 4, III Year; 1 hour per week; first term.
Advanced work in shades and shadows and perspective.

132. DRAWING:—Departments 2, 3 and 6, III Year; 3 hours per week; both terms.
Problems in Design dealing with the Theory of Structures.

ELECTRICITY.

135. MAGNETISM AND ELECTRICITY:—Departments 3, 5, 6 and 7, I Year; 2 hours per week; first term.
A course of lectures on general principles relating to magnetism, electricity, electromagnetism, electrostatics, etc., illustrated largely from engineering apparatus.
Text book:—Elementary Electricity and Magnetism—S. P. Thompson.

136. ELECTRIC CIRCUITS:—Departments 3, 5, 6 and 7, I Year; 2 hours per week; second term.

This course of lectures concerns chiefly fundamental principles relating to electric circuits and leads to consideration of such problems as the distribution of electric energy through lines and networks and the division of load between generators.

Text book:—Electrical Problems—Hooper and Wells.

137. ELECTRICITY:—Departments 3, 5, 6 and 7, I Year; 3 hours alternate weeks; both terms.

A laboratory course of experiments, given in logical order, designed to demonstrate fundamental principles in connection with the generation and flow of currents in electric circuits. The work is associated with the lecture courses, magnetism and electricity, and electric circuits (135, 136).

138. ELECTRICITY:—Departments 3, 5, 6 and 7, II Year; 2 hours per week; both terms.

Deals with the theory of electrical measurements, and detailed study of various methods applicable under different conditions in engineering practice to the measurement of resistance, current, potential difference, power and energy; calibration of commercial measuring instruments. The effect of choice of conditions of measurement on the accuracy of the result is considered.

Text book:—Electrical Measurements—Carhart and Patterson.

139. ELECTRICAL LABORATORY:—Departments 3, 5, 6 and 7, II Year; 2½ hours per week; both terms.

This laboratory course is closely associated with the lecture course 138 on electricity for the second year. The more important and useful methods of testing generators and circuits for electromotive force, resistance, current, grounds, etc., are practised, often under conditions such as occur in practice. The work also includes methods of calibration of measuring instruments for voltage, current, power and energy, and certain studies of properties of incandescent lamps.

140. ELECTRICITY:—Department 2, III Year; Departments 1 and 4, IV Year; 1 hour per week.

A course designed to fit the requirements of non-electrical students. A study of essential principles is followed by discussion of electrical apparatus, plants, power transmission, railways, etc.

Text book:—Elementary Electricity and Magnetism—Jackson.

141. POWER:—Departments 2 and 6, IV Year.

Under the name "Power" a number of operating experiments are arranged to afford mining and chemical engineering students some familiarity with measuring instruments, direct and alternating current machinery.

142. MAGNETISM AND ELECTRICITY:—Departments 3 and 7, III Year; 2 hours per week; both terms.

A course of lectures on theory of magnetism and magnetic circuits, theory of direct current generators, motors, etc.

Text book:—Elements of Electrical Engineering, Vol. I—Franklin and Esty.

143. ALTERNATING CURRENT:—Departments 3 and 7, III Year; 2 hours per week; second term.

A first course of lectures on alternating current, covering principles of measurement and leading to the analytical and graphical treatment of the simpler problems relative to alternating current circuits and machinery.

Text book:—Elements of Electrical Engineering, Vol. II—Franklin and Esty.

144. ELECTRICAL LABORATORY:—Departments 3 and 7, III Year; 6 hours per week.

This laboratory course is intended to afford the student an opportunity to become familiar with principles involved in continuous current shunt, series and compound wound generators and motors, and, to some extent, alternating current circuits and machinery. Other sections of the work deal with the magnetic properties of iron and steel, and study of iron losses in transformers and generators.

The course is arranged to stand in close relation to the lecture courses in the subjects of magnetism and electricity and alternating current (142, 143) for Year III, and to certain design work (145).

145. ELECTRICAL DESIGN:—Department 7, III Year; 4½ hours per week: one term.

A course of lectures dealing with design of electric machinery and plants, accompanied by designs to be worked out in the design room.

References:—Dynamo-electric Machinery—S. P. Thompson; Electric Machine Design—Parshall and Hobart.

146. Electrical Design:—Department 7, III Year.

A design room is set apart for working out of designs of electrical apparatus such as transformers, generators, motors, auxiliary apparatus, etc.

Special forms and notes are employed arranged to suit the various studies. Certain models are provided to assist where necessary.

147. Applied Electricity:—Department 7, IV Year.

This course deals by analytical and vector methods with the theory of alternating current circuits and machinery. Applications of theory are considered with regard to transformers, single and polyphase generators, synchronous motors and rotary converters, induction and commutating series motors, transmission lines, wave analysis, etc.

148. Electrical Laboratory:—Department 7, IV Year in connection with 147.

This laboratory course involves a thorough study of principles and properties of single and polyphase circuits and apparatus. Both vector and analytical methods are applied to the solution of problems based on tests made on laboratory machines.

The work deals mainly with constant voltage and constant current transformers, single and polyphase alternators, synchronous motors, rotary converters, induction and single phase commutating motors, transmission line, etc. The work does not consist only of factory tests, but is designed to lead the student to apply theory to practice as illustrated in the apparatus under test, with a view to an exact understanding of methods and an appreciation of limitations under many conditions. Free use is made of the oscillograph as a necessary device for "seeing" conditions under investigation. The best commercial measuring instruments are available.

GEOLOGY.

150. Geology (Elementary):—Departments 2 and 5, II Year; Department 1, III Year; 1 hour per week; both terms.

This course deals chiefly with historical geology with special reference to Canadian formations.

Reference books:—Introduction to Geology—Scott; Text Book of Geology—Dana.

151. ECONOMIC GEOLOGY. (Including Dynamical and Structural Geology.) Department 2, III Year; 2 hours per week; both terms; and Department 1, IV Year.

A study of the more important economic rocks, minerals and ores with their geological associations. Special attention paid to Canadian deposits.

152. ADVANCED GEOLOGY:—Department 2, IV Year.

(A) *Pre-Cambrian Geology.*—An account of the Keewatin, Huronian and Laurentian rocks of Canada, with their distribution, structural relations and economic features, and briefer accounts of similar formations in the United States and elsewhere.

Works of Reference:---Reports of the United States and Canadian Geological Surveys, of the Bureau of Mines of Ontario, etc.

(B) *Pleistocene Geology.*—Lectures on the formation and distribution of the drift deposits of North America, with brief references to other regions. Glacial, Interglacial and Post glacial beds are described, changes of climate are discussed with their probable causes, and the economic features of the clays, sands and gravels are pointed out. A weekly excursion is made during October and November to points of interest near Toronto, which is the centre of the most important development of Pleistocene in America.

(C) *Physiography.*—A course of lectures on the surface forms of the earth, with the geological factors which have produced them. The broad features of the earth, its plains, tablelands, hills, valleys, mountains, oceans, rivers and lakes are discussed in a general way, methods of topographical surveys and mapping are referred to, and the chief physiographic areas of Canada are described.

153. MINING GEOLOGY:—Department 2, IV Year, 1 hour per week; both terms.

A course of lectures on geological problems associated with mining, typical mining regions in Canada, the United States and elsewhere being discussed from the geological side. Works of reference:—Mineral Industry and the books mentioned under (A).

154. GEOLOGICAL EXCURSIONS:—Department 2, IV Year.

Trips to points of interest in the vicinity of Toronto.

155. ORE DEPOSITS:—Department 2, III Year; 1 hour per week; both terms.

Discussion of the origin and classification of ore deposits in a general way, the mode of occurrence of the chief metals, and statistics of production, special attention being given to the metals mined in Canada.

156. ECONOMIC GEOLOGY:—Department 2, III Year; 1 hour per week; both terms.

Laboratory work on ores, manner of occurrence, vein structure, etc. Geological maps of typical mining regions.

MINERALOGY.

157. ELEMENTARY MINERALOGY:—Department 5, I Year, Department 2, II Year; 2 lectures per week; first term.

After introducing the student to the chief chemical, physical and crystallographic characteristics of minerals, the course becomes descriptive and deals with about one hundred of the minerals most important from the industrial or scientific point of view.

Text books:—Minerals and how to study them—Dana; Text Book of Mineralogy—Dana.

158. MINERALOGY:—Department 5, I Year; 4 hours per week; first term; 3 hours per week; second term.

Introduction to blow-pipe analysis, determination of minerals by inspection and physical tests.

Text books:—Text book of Mineralogy—Dana; Mineral Tables—Eakle; Determinative Mineralogy and Blow-Pipe Analysis—Brush-Penfield.

159. PRIMARY MINERALOGY:—Department 1, II Year; 2 hours per week; first term.

A very brief introduction to the study of minerals and rocks.

Text books:—Minerals and how to study them—Dana; Handbook of Rocks—Kemp.

160. MINERALOGY:—Department 2, II Year; 1 hour per week; first term; 3 hours per week; second term. Determination of minerals by inspection and by means of physical tests; introduction to blow-pipe practice.

Text books:—Mineral Tables—Eakle; Determinative Mineralogy and Blow-pipe Analysis—Brush-Penfield.

161. MINERALOGY:—Department 1, II Year; 1 hour per week; first term; 2 hours per week; second term. Determination of minerals by inspection and by means of physical tests; study of common rock types and their identification.
Text books:—Mineral Tables—Eakle; Handbook of Rocks—Kemp.

162. MINERALOGY:—Department 5, II Year; 1 hour per week; second term. Introduction to the study of rocks; determination of minerals and rocks by means of tables based on the physical properties.
Text books:—Mineral Tables—Eakle; Handbook of Rocks—Kemp.

163. ELEMENTARY PETROGRAPHY:—Department 2, III Year; 1 hour per week.
A course of lectures and laboratory work introducing the student to the macroscopic study of rocks.
Text books:—Handbook of Rocks—Kemp; Rocks and rock minerals—Pirsson.

164. MINERALOGY:—Department 2, III Year; 2 hours per week. Determination of minerals by means of the blow-pipe and physical properties.
Text books:—Mineral Tables—Eakle; Determinative Mineralogy and Blow-Pipe Analysis—Brush-Penfield.

165. GENERAL PETROGRAPHY:—Department 2, IV Year. 1 hour per week; first term; 2 hours per week; second term.
Study of the chief rock-forming minerals and of some phases of petrography not covered in the course of the previous year.

166. PETROGRAPHY:—Department 2, IV Year; 2 hours per week; both terms. Study of the chief rock-forming minerals, of rocks in thin sections and in hand specimens.
Text books:—Rocks and Rock Minerals—Pirsson; Minerals in Rock Sections—Luquer.

167. CRYSTALLOGRAPHY:—Department 5, III Year; 1 hour per week.
A course devoted to lectures and practical work on the geometrical and optical properties of crystals, preparing the student for the study of rocks in thin sections and for the examination of crystallized substances, natural and artificial, under the polarizing microscope.

MINING, METALLURGY AND ORE DRESSING.

170. MINING:—Department 2, II Year; 1 hour per week; second term.
An introduction to the study of mining and ore dressing methods.

171. MINING AND ORE DRESSING:—Department 2, II Year; 3 hours per week; second term.
Introductory work with rock-drills and various ore dressing-appliances.

172. MINING:—Department 2, III Year, 1 hour lecture per week; both terms; 3 hours laboratory per week; one term.
General mining methods.

173. ASSAYING:—Departments 2, 5 and 6, III Year; 1 hour lecture per week; one term; 3 hours laboratory work per week; both terms.
Assaying of various ores for gold, silver, lead and copper.

174. ASSAYING:—Department 2, IV Year; 1 hour lecture per week; one term; 3 hours laboratory work per week; one term.
Continuation of the work of Year III.

175. MINING:—Department 2, IV Year; 1 hour lecture per week; both terms.
Special mining methods, examinations, reports.

176. MILLING:—Department 2, IV Year; 3 hours laboratory work per week; both terms.
Advanced work with ore dressing appliances, complete mill tests.

177. METALLURGY:—Department 2, IV Year; 3 hours laboratory work per week; both terms.
Experiments in the pyro-metallurgy of copper and lead, refining of base bullion, cyanide tests.

178. METALLURGY:—Departments 2, 5 and 6, II Year; 1 hour per week; one term.
An introduction to the study of general metallurgy.

179. METALLURGY:—Departments 2, 5 and 6, III Year; 1 hour per week; both terms.
General metallurgy of gold, silver, lead and copper.

180. METALLURGY:—Departments 2, 5 and 6, IV Year; 1 hour per week; both terms.

Advanced studies in the metallurgy of gold, silver, copper and lead, etc.

181. METALLURGY OF IRON AND STEEL:—Departments 1, 2, 3, 5, 6 and 7, III Year; 1 hour per week; both terms.

The physical properties of iron and steel and the circumstances that influence the strength, etc. of iron. The different modes of manufacture of iron and steel and the effect of different processes of making on the resulting products; explanations of specifications for iron and steel adopted by engineers.

182. ORE DRESSING:—Department 2, III Year; 1 hour per week; both terms;.

183. MINING AND ORE DRESSING:—Department 2, III Year; 3 hours per week; one term.

184. ORE DRESSING:—Department 2, IV. Year; 1 hour per week; both terms.

Continuation of work of Year II. Experimental work to determine falling ratios, magnetic permeability of minerals, etc., sampling of mill products and ore in place.

MATHEMATICS.

187. ALGEBRA:—All Departments, I Year; 2 hours per week; both terms.

Simple equations of one, two and three unknown quantities; quadratic equations of one and two unknown quantities; elementary treatment of variation, proportion and progressions; interest forms and annuities, permutations, combinations, binomial theorem.

Text book:—Intermediate Algebra—DeLury.

188. ANALYTICAL GEOMETRY:—All Departments, I Year; 1 hour per week; both terms.

The course in Elementary Analytical Geometry covers the more familiar propositions in connection with the straight line, circle, parabola, ellipse and hyberbola. The subject is treated so as to illustrate the general methods of analytical geometry.

189. TRIGONOMETRY, PLANE:—All Departments I Year; 2 hours per week; both terms.

Trigonometrical ratios with their relations to one another, sines, etc., of the sum and difference of angles with deduced formulæ, solutions of triangles, expressions of the area of triangles, radii of circumscribed, inscribed and escribed circles.

Text book:—Practical Trigonometry—Plane and Fawdry.

190. CALCULUS, DIFFERENTIAL AND INTEGRAL:—Departments 1, 2, 3, 4, 6, and 7, II Year; Department 5, II Year, optional; 2 hours per week; both terms.

This is an elementary course in the infinitesimal calculus, but adequate to afford a knowledge of the character and methods of the subject and to enable students in chemistry, engineering, etc., to understand such of their text books as introduce the calculus.

191. TRIGONOMETRY, SPHERICAL:—Department 1, II Year; 1 hour per week; first term.

A course of lectures includes the derivation of formulæ and their application to the solution of triangles and to practical problems.

Text book:—Spherical Trigonometry—Todhunter and Leatham.

192. LEAST SQUARES, METHOD OF:—Department 1, III Year; 1 hour per week; first term.

The course of lectures includes: The general principles of probability, the law of error, direct measurements of equal and different weights; mean square and probable errors; indirect measurements; conditioned observations; applications to empirical constants and formulæ, etc.

Text book:—Least Squares—Merriman.

TECHNICAL PHYSICS.

195. ACOUSTICS:—Department 4, III Year.

Wave motion, propagation, reflection and transmission of sounds, Laws of vibrating strings, pipes and forks. Velocity of sound. Musical scales. Absorption of sound by various substances, use of deadening material in buildings. Amount of reverberation permissible and desirable in public buildings. Lectures and Laboratory work—Fall Term.

196. HYDROSTATICS:—All Departments, II Year.
Laws of fluid pressure and application to machines.
Density of solids and fluids, theory of flotation.
Lectures and Laboratory work, Spring term.

197. OPTICS:—All Departments, II Year.
Rectilinear propagation of light, illumination, photometry, light standards. Distribution of light by reflectors and diffusers, general and selective absorption, economic values of artificial lights.
Laws of reflection and refraction, theory of optical instruments.
Light considered as wave motion, dispersion, spectrum analysis, color phenomena, polarization.
Lectures and Laboratory work, Fall term.

198. HEAT:—Departments 1, 5, III Year.
Generation and propagation of heat. General and industrial thermometry, calorimetry and pyrometry. Linear and cubical expansion, gas laws. Specific heat of solids, liquids and gases, latent heat of fusion and vaporization. Mechanical equivalent of heat. Carnot cycle.
Lectures and Laboratory work, Fall term.

199. PHOTOGRAPHY:—Departments 1, 4, III Year; Departments 3, 7, IV Year.
The camera and its adjustments, lenses, shutters, screens. Plates for various purposes, films, prevention of halation. Lighting, exposure, development. Paper of various kinds, printing, enlargement and reduction, blue printing and allied processes. Record photography, photogrammetry and photo-surveying. Photography in color.
Lectures Fall Term and Laboratory work both terms.

SURVEYING.

205. SURVEYING:—Departments 1 and 2, I Year; 1 hour per week; both terms.
The lecture course includes—the general principles; surveying with the chain, the compass and chain and the transit and chain; the applications of trigonometry to inaccessible heights and distances; mensuration of surfaces and solids, co-ordinate surveying, division of land, etc.
Text books:—Land Surveying—Gillespie; Theory and Practice of Surveying—Johnson.

206. FIELD WORK:—Departments 1 and 2, I Year; 9 hours per week; first term.

This course comprises—testing chains; practice in chaining; a complete survey of a piece of land with the chain; keeping of field notes; the use of the compass and transit in surveying closed figures and traverse lines and in ranging straight lines; plotting by latitudes and departures and otherwise; computing areas.

207. SURVEYING:—Departments 1 and 2, II Year; 1 hour per week; both terms.

This course of lectures takes up in detail, simple, reverse and compound curves as applied to railroad surveying. It also includes stadia, plane table and photographic surveying as applied to topographic work and also the main features of mine and hydrographic surveying.

Text books:—Henck, Shunk, Searles, Allen (Field books for Engineers) Theory and practice of surveying—Johnson; Plane surveying—Raymond.

208. FIELD WORK:—Departments 1 and 2, II Year; 9 hours per week ; first term.

This course of instruction embraces all adjustments of the transit, accurate determination of angles of closed figure, minor problems in triangulation—ordinary and special problems as applied to railroad work in regard to curves, simple, reverse and compound, profile levelling and plotting of profile.

209. SURVEYING AND LEVELLING:—Departments 1 and 2, III Year; 1 hour per week.

This course of lectures takes up the work of the railroad engineer on construction, including profiles, cross sectioning, computation of volume of earth work, overhaul, transition curves, laying out turnouts, frogs, and switches, etc.

Also a discussion of trigonometric and barometric levelling.

Text books :—Field Engineering—Searles ; Railroad Curves and Earthwork—Allen.

210. FIELD WORK:—Departments 1 and 2, III Year; about 9 hours per week ; fall term.

This includes adjustments of levels and accurate check differential levelling, determination of profile, cross sectioning and computation of earthworth of located line on ground and plotting of same; also cross sectioning by use of hand level. A complete stadia topographic survey is made and plotted. The spiralling of curves on track already laid down and practical methods of locating and placing sidings and switches.

FOURTH YEAR OPTIONS.

211. RAILWAY ENGINEERING:—Department 1, IV Year; about 2 hours per week.

The object of this course is to make the student acquainted with the general principles of railroad and street railway engineering and the subject will be studied from the standpoint of—economic theory of location; train resistance; effect of grade, distance and curvature and rise and fall; maintenance of way; yards and terminals; tunnels, and street railway practice.

212. FIELD WORK:—Department 1, IV Year; about 11 hours per week; first term.

The work consists of an original survey for a railroad some one or two miles in length, the work being conducted according to the most modern methods of location. Upon the completion of this work a contour map of the district surveyed is plotted in the drafting room and a line adjusted to it. This is staked out in the field, profiles taken and complete estimates of the cost of construction made.

213. SANITARY ENGINEERING.

Sanitary Chemistry:—Department 1, IV Year. A lecture and laboratory course of about 16 hours per week for one term on water supply and sewage disposal.

Botany:—An elementary lecture and laboratory course of about 3 hours per week; second term, on the economic algae and fungi.

Zoology:—Lecture and laboratory course of 4 hours per week; second term, in the morphology, ecology and classification of aquatic animals.

Bacteriology :—A lecture and laboratory course of 8 hours per week; second term, in elementary bacteriology.

Sanitary Engineering:—A lecture course of 1 hour per week, one term; in which consideration is given to the problems of water supply and sewage disposal as viewed by the engineer.

Reference books:—Sewage Disposal: Kinnicutt, Winslow & Pratt. Water Supplies: Turneaure & Russell.

214. HIGHWAY ENGINEERING:—Department 1, IV Year. A lecture and laboratory course of about 8 hours per week dealing with materials, design and construction of highways and pavements and the testing of various materials used in such work.

215. STRUCTURAL ENGINEERING:—Students in Civil Engineering who desire to specialize in the subjects best fitting them for designing or constructing engineers on bridge, building or other analogous work, may do so by selecting the Structural Engineering Option in the fourth year. In addition to the obligatory subjects, the following lecture and laboratory courses are provided for those selecting this option:

Theory of Structures:— (16)This consists of a lecture course of 2 hours per week; both terms, with an accompanying course of about 7 hours per week, in design.

Strength and Elasticity of Materials:— (17)This is a laboratory course in the elastic and physical properties of the materials of construction, occupying about 9 hours per week in the first term and 6 hours per week in the second term.

Steel and Iron (23):—In this course of lectures, consisting of one hour per week in the first term, the physical properties of steels and irons are discussed.

Reinforced Concrete (22):—Under this title, the theory of reinforced concrete is discussed in a lecture course of one hour per week; both terms.

Structural Design of Buildings (51):—This is a lecture course devoted to the design of the structural features of buildings, consisting of two hours per week in the first term and one hour per week in the second term, and in addition a laboratory or drafting room course of about six hours per week; both terms.

Mill Building Design (24):—This consists of a lecture course of one hour per week; both terms; and a drafting room course of about 3 hours per week; both terms.

216. ARCHITECTURAL ENGINEERING:—Architectural students desiring to give special attention to the structural design of buildings may do so by electing to take the Architectural Engineering Option in the fourth year. The following subjects, in addition to those required of all students in the fourth year in Architecture, are required:

Structural Design of Buildings (51):—The lecture course in connection with this subject consists of two hours per week in the first term and one hour per week in the second term, and a drawing course of about 15 hours per week; both terms.

Mill Building Design (24):—This consists of a lecture course of one hour per week; both terms; and a drawing course of about 3 hours per week; both terms.

Architectural Design (48A):—This is an abridged course, consisting of lectures occupying one hour per week; both terms, and studio work of about six hours per week; both terms.

MODERN LANGUAGES.

217. FRENCH.

Required in Department 4, optional in Departments 1, 2, 3 and 7, I and II Years; 1 hour per week; both terms.

An elementary course intended to train the student in the translation of scientific journals and treatises.

218. GERMAN.

Required in Departments 5 and 6, all years, optional in Departments 1, 2, 3 and 7, I and II Years; 1 hour per week; both terms.

An elementary course intended to train the student in the translation of scientific journals and treatises.

THESIS.

219. THESIS.

Required in all departments IV Year.

Each student is required to prepare a thesis of between six thousand and seven thousand words on a subject approved by Council. See Circular of information.

VACATION WORK.

220. CONSTRUCTION NOTES. See special circular of information.

OUTLINE OF VACATION WORK.

CONSTRUCTION NOTES.

II and III Years.

The construction notes required consist of neat and complete dimensioned sketches in pencil of any structures, machines or plant which may be of interest. Any object chosen should be represented and dimensioned in such a manner that it could be completely constructed from the notes as the only available information.

From students in Department 2, who have been actually engaged during the summer with Government or other approved geological survey parties, geological field notes will be accepted in lieu of construction notes.

PROFESSIONAL DEGREES.

The attention of graduates is directed to the following regulations respecting professional degrees.

The following degrees have been established: Civil Engineer (C.E.), Mining Engineer (M.E.), Mechanical Engineer (M.E.), Electrical Engineer (E.E.), Chemical Engineer (Chem.E.), subject to the following regulations:—

1. A candidate for one of the said degrees shall hold the diploma of the School of Practical Science or of the Faculty of Applied Science and Engineering and the degree of Bachelor of Applied Science except in the case provided for in clause 11 hereunder.

2. He shall have spent at least three years after receiving the degree of Bachelor of Applied Science in the actual practice of the branch of engineering wherein he is a candidate for a degree.

3. Intervals of non-employment or of employment in other branches of engineering shall not be included in the above three years. It shall not be necessary that the several periods requisite to make up the said three years be consecutive.

4. Satisfactory evidence shall be submitted to the University examiners as to the nature and length of the candidate's professional experience for the purpose of clauses 2 and 3.

   The Examiners shall satisfy themselves by oral or written examinations in regard to the candidate's experience and competence.

5. The candidate shall prepare an original thesis on some engineering subject in the branch in which he wishes a degree; the said thesis to be accompanied by all necessary descriptions, details, drawings, bills of quantities, specifications and estimates.

   The candidate may be required at the option of the Examiners to undergo an examination in the subject of this thesis.

6. Notice in writing shall be sent to the Secretary not later than the first day of February, informing him of the degree to which the candidate wishes to proceed and of the title of his proposed thesis for the approval of the Examiners.
7. The evidence under clause 4, and the thesis, with accompanying papers, described in clause 5, shall be sent to the Secretary not later than the first day of April.
8. The candidate shall be required to present himself for examination in the month of April at such time as may be arranged by the Examiners.
9. The fee for any one of the said degrees shall be twenty dollars, and shall be paid to the Bursar not later than the first day of April.
10. The thesis, drawings, and other papers submitted under clause 7 shall become the property of the University.
11. Candidates who graduated from the School of Practical Science before June, 1905, shall not be required to hold the degree of Bachelor of Applied Science.

EXTRACTS FROM SURVEY ACTS.

From the Ontario Act Respecting Land Surveyors and Survey of Lands (R.S.O.)

"26. Any person serving as an apprentice as hereinbefore provided, may, with the permission of the Board of Examiners, attend the Ontario School of Practical Science, or any school, college or university, the course of study in which is, in the opinion of the Board, sufficiently similar to that in the Ontario School of Practical Science, for the purpose of taking any course of study which includes any subject required for the final examination for admission to practice as a land surveyor, but the total period of such apprenticeship and of course of study shall not exceed the period of four years from the date of the articles of apprenticeship as above mentioned, and not less than three years of the said period of four years shall be passed in the actual service of a practising Ontario Land Surveyor.

* * * * * * * *

"28. The privilege of a shortened term of apprenticeship shall also be accorded to any graduate of the Royal Military College at Kingston or of the Ontario School of Practical Science in civil engineering or in mining engineering, or of the McGill College, Montreal, in civil engineering or in mining engineering, and such person shall not be required to pass the preliminary examination hereinbefore required for admission to apprenticeship with a land surveyor, but shall only be required to serve under articles with a practising land surveyor duly filed as required by section 32 of this Act, during twelve successive months of actual practice, after which, on complying with all the other requirements, he may undergo the examination prescribed by this Act.

"29. Such person at any time during his apprenticeship may, with the permission of the Board of Examiners,attend the Ontario School of Practical Science, or any school, college or university, the course of study in which is, in the opinion of the Board, sufficiently similar to that in the Ontario School of Practical Science, for the purpose of taking any course of study which includes any subject required for the final examination for admission to practice as a land surveyor, but the total period of such apprenticeship, and of course of study, shall not exceed the period of two years from the date of the articles of apprenticeship as above mentioned, and not less than twelve months of the said period of two years shall be passed in the actual service of a practising Ontario Land Surveyor."

From Act Respecting Manitoba Land Surveyors.

"28. (1) The privilege of a shortened term of apprenticeship shall be accorded to graduates of the Royal Military College of Canada and to graduates in civil engineering of the University of McGill College of Montreal, the School of Practical Science of Toronto, the School of Mining at Kingston, and graduates of Manitoba University who have taken first or second class honours in the special course in mathematics; and such graduates shall not be required to pass the preliminary examination hereinbefore prescribed for admission to apprenticeship with a land surveyor, but shall only be required to serve under articles with a practising land surveyor, duly filed as required by section 24 of this Act, during twelve successive months of actual practice of which at least six months shall be at actual practice in the field, after which, on complying with the other requirements of this Act, he my undergo the examination for commission to practice prescribed by this Act."

From British Columbia Land Surveyors' Act, 1905.

"52. Whosoever shall have followed, during at least two years, a regular course of studies in all the branches of the sciences required by law in order to be received as a land surveyor; who has attended the lectures of a British university or college where a complete course of theoretical and practical instruction is given in civil engineering, physics, and all other branches of sciences required by law in order to be admitted as a land surveyor, and who has received from such university or college, after a regular examination, his diploma or degree as a civil engineer or land surveyor, on satisfying the Board that he is duly qualified as aforesaid, may, without undergoing the examination for admission to the study of land surveying, be received as a student by any member of the Corporation practising in this Province, and shall be bound to perform only twelve months' actual service in the field as such, or; if he has obtained his degree or diploma as a civil engineer or land surveyor in less than two full years, then only such time of service which, added to the time he has devoted to his course of studies,

shall complete the period of three full years; and, at the expiration of the said active service, such person, on complying with the other provisions of this section, shall have the right to present himself and undergo the examination required by law, and, if qualified, to be admitted to practise as a land surveyor for the Province as if he had served his three full years under his indentures with a practising land surveyor; but instead of paying fifty dollars he shall be obliged to pay sixty dollars as fees for his examination and commission as land surveyor."

The above section is to be taken collectively as a whole, no separate clause or sentence can be applied to any particular case.

From the Dominion Lands Act, 1908.

"Every graudate in surveying of the Royal Military College of Canada. and every person who has followed a regular course of study in all the branches of education required by this Act for admission as a Dominion land surveyor, for at least two years, in any college or university where a complete course of theoretical and practical instruction in surveying is organized, and who, after examination has thereupon received from such college or university a diploma or certificate, shall be exempt from serving three years aforesaid, and shall be entitled to examination for a commission after being admitted upon examination as aforesaid as an articled pupil and serving one year under articles with a Dominion land surveyor, including six months' actual practice with him in the field, on producing an affidavit from the said surveyor in said form C, together with his own affidavit in said form D, that he has served for one year as herein provided; but it shall rest with the Board to decide whether the course of instruction in such college or university meets the requirements of this section.

EXTRACT FROM THE ONTARIO ARCHITECTS' ACT.

"Any student who has matriculated in Arts in any University in His Majesty's dominions, or in the Ontario School of Practical Science, shall not be required to pass the preliminary examinations.

"23. Any person who applies for admission to registration as an architect after the coming into force of this Act, shall not be less than twenty-one years of age, shall have served as a student not less than five years with a principal or principals entitled to register under this Act, or with any other principal or principals approved by the Council, and have passed such qualifying examinations as may be required by this Act.

"24. (3) Any person who has graduated from the Ontario School of Practical Science shall be required to serve only three years as a student, one of which three years may be served during the vacation of such school.

"(4) Upon and after the passing of this Act, students shall serve such term as is required to be served by the provisions of this Act, under indenture to be a registered architect, which indenture and any assignment thereof with affidavit of execution thereto attached shall be filed with the Registrar upon payment of such fees as the Council may by regulation direct.

LABORATORY EQUIPMENT.

THERMODYNAMIC AND MECHANICAL LABORATORY.

The University in 1909 completed the erection of a large, well-equipped building for the accommodation of the steam, gas, mechanical and hydraulic laboratories. A more complete description of the laboratories has been published elsewhere so that the present description is only intended to give the main features.

The part of the building set apart for thermodynamics and other mechanical work is the ground floor of a room 60 ft. x 155 ft. This room is lighted entirely from the roof in a very perfect way. A part of the space 40 ft. wide running the entire length of 155 feet is served by a 3-ton travelling crane and contains the following equipment:

50 h.p. Brown engine with separate jackets on both heads and barrel of cylinder.

Two-stage Rand air compressor having compound steam cylinders, each fitted with Meyer cut-off gear. The low pressure air cylinder has Corliss inlet gear.

30 h.p. high-speed Leonard tandem compound engine with shaft governor.

15 h.p. high speed McEwen engine.

75 h.p. two line compound Willans engine.

15 h.p. DeLaval turbine with special nozzles for condensing and non-condensing tests.

Two 15 h.p. Leonard engines with different types of valves, which are used for valve setting.

There are also two surface condensers with air pumps so arranged that any engine in the laboratory may be made to exhaust into the atmosphere through an open heater or into one of the condensers, the change from one arrangement to the other being accomplished in a few minutes without the aid of valves.

The laboratory further contains:

A 3-ton York refrigerating machine with tanks.

An Amsler transmission dynamometer.

Apparatus for testing injectors and steam pumps.

Numerous other pieces of apparatus and instruments.

The work on internal combustion engines and producers is performed on the following:—

18 h.p. Canada suction gas producer.

14 h.p. National gas engine arranged for various compressions and points of ignition.

10 h.p. Fielding and Platt engine for city gas or coal oil, having various adjustments.

8 h.p. Otto gas engine.

6 h.p. marine gasoline engine.

Ericsson air engine.

Various accessories to above machines.

Steam for the laboratory is supplied by two 50 h.p. and one 100 h.p. Babcock and Wilcox boilers, the latter having an internal superheater. These boilers are located in a separate boiler room. They are used for experimental work only and are fitted up for testing. The gases pass up through two independent chimneys and these have been arranged so that the draft and other conditions in the chimney at any point of its height may be examined.

In smaller work rooms off the main laboratory are placed belt and oil testing machines, apparatus for testing the efficiency of gears and machines, and for experiments in the balancing of machinery.

HYDRAULIC LABORATORY.

The hydraulic laboratory occupies two floors each 40 feet x 112 feet, which are well lighted by large windows on the side and end.

The water for the experimental work is pumped through the various pieces of apparatus from a well by means of two turbine pumping units both of which are driven by a Belliss and Morcom compound engine of 125 h.p. running at a speed of 525 revs. per minute. Both engine and pumps have been installed with a view to using them in experimental work as well as for supply of water for other apparatus used in the laboratory.

The pumping units are capable of delivering one cubic foot of water per second against heads of 250 feet and 300 feet respectively. These units are designed and connected up so that they may be run in series giving the above discharge at 550 feet head or they may be run in parallel giving double the discharge at a lower head. Each pumping unit consists of two two-stage pumps mounted on a common base and driven by a single pulley and the construction and piping are such that each two-stage pump may be driven separately or that all may be driven at once, discharging separately one cubic foot per second at about 125 feet head through each of four independent pipes, or else the pumps may be run in series or in parallel. The scheme is thus well adapted to laboratory work and under the heads used on reaction turbines about six cubic feet per second may be obtained.

The laboratory further contains a large vertical steel tank 5½ feet diameter by 34 feet high with arrangements for the attachment of nozzles and other mouth pieces, etc. Connections are also arranged for reaction turbines, the tank acting as a reservoir.

The discharge from the turbines or nozzles is measured in a weir tank nearly 6 feet wide and 21 feet long containing a contracted weir 4½ feet wide. This weir may be calibrated by two weighing tanks each having a capacity of about 240 cubic feet.

There are three reaction turbines and two impulse wheels all ready for experiment, the power being measured by brakes and the water by weir or orifices. Amongst the reaction turbines may be mentioned the one designed and built by Escher Wyss and Co., specially for the laboratory.

Smaller orifice and weir tanks each about 3 x 3 x 12 feet with necessary measuring tanks are arranged for instruction in coefficients of various kinds and practice with weirs and orifices.

A Venturi meter and other meters, also an hydraulic ram and similar devices are available for testing, and good facilities have been arranged for investigating friction and other properties of pipes and fire hose.

For special investigations on turbine and centrifugal pumps, other pumps in addition to those already described have been arranged.

The basement of the laboratory contains an open trough 5 feet wide about 110 feet long with a large weir at one end. It is intended to use this trough for experiments on the flow in open channels, for measurements of large discharges by means of the weir, and for experiments with current meters and Pitot tubes.

Numerous pieces of smaller apparatus together with all instruments required have also been provided, and the laboratory equipment is believed to be very complete.

DONATIONS TO THE THERMODYNAMIC AND HYDRAULIC LABORATORIES.

The following donations to the equipment of the laboratories have been made through the kindness of those mentioned.

50 h.p. Wheeler Surface Condenser, presented by Mr. F. M. Wheeler, New York.

Blake Feed Pump, presented by the manufacturers.

6 inch New American Turbine, presented by Wm. Kennedy & Sons, Owen Sound, Ont.

Two Crown Water Meters, presented by the National Meter Co., New York, through Mr. M. Warnock, Toronto.

Rock Drill presented by Sullivan Machinery Co., New York, through Mr. A. E. Blackwood, '95.

Marine Gasoline Engine, presented by Canadian Fairbanks Co., Montreal.

Two engines with different types of valve, presented by Messrs. E. Leonard & Sons, London, Ont.

Bundy trap from American Radiator Co., through Messrs. Russell & Gifford.

Dunham steam trap from C. A. Dunham Co.

Sectional models of valves from American Radiator Co.

Sectional model Mason Reducing Valve by Russell & Gifford.

In addition to the above, other firms have materially assisted by offering apparatus at or below cost price, among whom may be specially mentioned, The Canadian Rand Drill Co., Sherbrooke, Quebec.

PHYSICAL LABORATORIES.

The optical laboratory is equipped with Weinhold optical benches and accessories for determining the constants of mirrors and lenses and for demonstrating the construction and use of telescopes, field glasses, microscopes, etc. There is also a full equipment of optical instruments including telescopes, microscopes, field glasses, comparators, spectrometers, level tester, photometers of various types, focometer, dynameter, cathetometer, polariscope, projecting lanterns, etc.

The photographic laboratory is supplied with several cameras for viewing, copying, enlargement and reduction, a spectroscopic camera and an electric blue printing machine and the necessary dark rooms.

The hydrostatic laboratory contains a supply of various forms of hydrometers, hydrostatic balances, Jolly balance, Mohr's balance, hydrostatic press, vacuum pumps, gauges, etc.

The heat laboratory is equipped with a full supply of calorimeters and accessories for determinations of latent and specific heat, expansion apparatus, air thermometer, apparatus for verification of Boyle's law and pressure and boiling point curve and for determination of the absolute expansion of mercury. Callendar's apparatus for determination of the mechanical equivalent of heat.

The acoustical laboratory is provided with sonometer, siren, forks ordinary and electric, Lissajous' and Melde's apparatus, organ pipes of various forms, manometric flame apparatus and a special equipment for work in architectural acoustics consisting of torsion chronograph, electropneumatic wind chest and standardized organ pipes and other accessories.

ELECTRICAL LABORATORIES.

Galvanometer laboratory:—The equipment of this laboratory is, in part, as follows:—A set of D'Arsanval galvanometers conveniently located at tables about the laboratory, a set of resistance boxes for use with the same; measuring instruments including ammeters, voltmeters, wattmeters, potentiometers and standard cells. Apparatus for the measurement of low resistance including a ductor and for high resistance including a megger, several Carey Foster outfits and a Roller bond tester. There are also experimental lines for practice in locating faults, photometer outfits with rotating devices and various types of arc lamps.

Another room is fitted more especially for calibration of electrical instruments for alternating and direct currents. About one hundred and twenty portable measuring instruments are available for students' use, also standard instruments, including Weston laboratory standards, Kelvin balances and a Wolff potentiometer, with which the portable instruments may be compared.

Machine laboratory:—This laboratory, occupying two large rooms, contains twenty-five dynamos and motors varying in capacity from two to twenty kilowatts, adapted for experiments illustrating the properties of compound shunt and series dynamos and motors, arc machines, etc. Switch-boards, numerous rheostats, lamp racks, starting boxes, circuit breakers, flexible cables, brakes, torsion dynamometers, tachometers, etc., are available for use with the machines.

This laboratory also contains two 15 kw., 25 cycle and two special 15 kw., 60 cycle General Electric polyphase revolving field alternators direct driven by motors, two rotary converters of 10 kw. and 5 kw. capacity, a 7½ kw. General Electric polyphase induction motor with slip ring rotor, Westinghouse three phase squirrel cage induction motors, Wagner single phase motor, Westinghouse single phase series motor, Westinghouse alternator, and several three phase and single phase induction motors; also transformers, reactive coils, and other details, as in the direct current section of the laboratory described above, for experiments on the properties of alternating currents and alternating current apparatus in general. A constant-current transformer with its load of six series arc lamps,a three-element oscillograph, for studying wave forms, a high potential transformer and a mercury arc rectifier may also be mentioned. The students are supplied with Weston, Westinghouse and Thomson portable instruments for measuring purposes.

A motor generator set is being installed comprising a 65 h.p. motor driving on the same shaft a 30 k.w. 110 volt d.c. generator and a 30 k.w. 60 cycle 110 volt alternator with direct connected enciter.

Magnetic laboratory:—A room is fitted with appliances for the study of saturation and hysteretic properties of samples of iron and steel, as well as a transformer for determining dielectric strength. The room also serves for exercise in winding models of direct current armatures, alternators, etc.

High potential transformer:—A 20 kw. transformer of 200,000 volts is being installed in a separate room.

CHEMICAL LABORATORIES.

The Chemical laboratories are situated in the western half of the Chemistry and Mining building, on the first and second floors. The rooms are large and well lighted, and are supplied with the usual modern equipment.

The first and second year laboratory for qualitative work has accomodation for 112 students, each working space being supplied with water, gas and fume cupboard. The laboratory for quantitative analysis will accommodate 48 students, and is supplied with commodious fume cupboards and all necessary apparatus. A laboratory with working places for 36 is provided for the students engaged in the study of technical chemistry; it is equipped with appliances for the preparation and testing of chemical products. A laboratory for fourth year students with accommodation for eight workers has just been fitted up. Each of these laboratories has its own balance room adjoining, furnished with instruments from the best makers and adapted to the particular objects in view.

In addition there are rooms set apart for gas analysis, electrolytic analysis, and a specially constructed fireproof laboratory for combustion, crucible and bomb furnaces. A new calorimeter room has just been equipped in the basement. Each of these laboratories is supplied with apparatus of the most approved design, providing excellent facilities for the prosecution of work in analytical and technical chemistry.

ELECTROCHEMICAL LABORATORIES.

The Electrochemical laboratories which are situated in the Chemistry and Mining building are provided with special facilities for electrolytic work, including a large storage battery and electroplating dynamo with tanks as well as a complete set of apparatus and electrical measuring instruments. The experimental work on electric furnaces is performed in two rooms specially equipped for this purpose with rheostats and switchboard connections to a 120 kw. D.C. generator, which supplies the current required.

ASSAYING LABORATORIES.

Two assaying laboratories are situated in the basement of the Chemistry and Mining building, one has a floor space of 17 feet x 47 feet, and the other 28 feet x 37 feet. Adjoining each is a room 15 feet x 11 feet, with the necessary equipment for the wet work in connection with assaying. Common to both laboratories is a balance room furnished with gold balances set on a concrete pier. Each of the laboratories contains a number of melting holes for crucible fusions, various gas furnaces both for crucibles and muffles, and two large brick muffle furnaces.

The furniture comprises lockers for the students, tables for the pulp balances and the necessary cabinets and shelving.

Adjoining the assay laboratories is a preparation room (19 feet x 13 feet) which is equipped with a motor, crusher, pulverizer, sample grinder and all the necessary hand pulverizers, screens, etc., for preparing ores for assay.

METALLURGICAL LABORATORY.

The metallurgical room is 40 feet x 21 feet and is equipped at present with a reverberatory furnace for roasting sulphide and arsenical ores, a water jacketted blast furnace for copper smelting, fume cupboard, lockers, tables, etc.

MILLING AND CONCENTRATING LABORATORY.

A detached building 72 feet x 70 feet in area, contains the milling and concentrating equipment. It is heated, lighted and supplied with power from the main building, and is divided into two parts. The greater part, with 72 feet x 53 feet floor space, and 22 feet high, contains the milling and concentrating equipment. The machinery for the former operations consists of a five-stamp battery erected on concrete foundations. Challenge ore feeder, amalgamating plates, Wilfley table, a clean up pan, steel settling tanks, a steel tank suspended from the roof girders to furnish a constant supply of water, and a track with travelling crawl to transport ore. This is driven by a 15 horse power motor.

The concentrating part consists of a set of five revolving trommels for wet screenings, four three-compartment jigs, a trough classifer delivering three products, and two revolving buddles, Wilfley Slimer, Deister Slimer, Richard's Pulsating Classifier, Richard's Pulsating Jig, a Behrend Dry Concentrator, a dry sizer, besides experimental apparatus of various kinds for experimenting on the falling rates of ore particles, the settling of slimes, surface tension action in grease and flotation methods, etc. The waste products run to the same settling tanks as the tailings from the stamp battery. The ore is handled by a travelling crawl. All the machinery in this part is driven by a 10 horse power motor.

The lower floor has been fitted up for lixiviation work with apparatus for the treatment of sands and slimes, different types of filter press, vacuum plant agitators, etc.

The plant throughout is intended mainly for experimental purposes and is made of such a size that numerous experiments can be carried out on small quantities of ore. Tests can also be made on lots of one or two tons.

The other part of the milling building with 72 feet x 17 feet floor space and 15 feet high, is divided into four separate rooms. The largest of the four rooms has an area of 476 square feet and is devoted to the crushing and pulverizing of the ores preparatory to their treatment in the milling and concentrating room. It is isolated in order to confine the dusty operations as far as possible to this one room, and is equipped with a gyrating

crusher of Hadfield's make, a set of Hamilton rolls 16 inches by 12 inches, platform scales for weighing ore, a jib crane, pulleys, buckets, etc., for handling the rock. An adjoining room contains a 30 h.p. motor for driving the machinery of the crushing department, and storage bins for ore, work bench, etc. Another room with 17 feet x 15 feet floor space, is furnished with a magnetic separator of the Rowan-Wetherill type, driven by its own motor.

One room of the same size as the above remains available for future additions.

STRENGTH OF MATERIALS LABORATORY.

This laboratory is intended for the scientific and commercial testing of materials of construction such as iron, steel, timber, concrete and masonry.

It is supplied with the following:

An Emery 50-ton hydraulic machine, built by Wm. Sellers & Co., of Philadelphia, for making tests in tension and compression.

A 100-ton screw power machine, built by Riehle Bros., Philadelphia. It is designed for making tests in tension, compression, shearing and cross-breaking and will take in posts 12 feet long and beams up to 18 feet in length.

A Riehle 10-ton screw power universal testing machine.

A Riehle 50-ton screw power universal testing machine.

A 15-ton single lever-machine, built by J. Buckton & Co., Leeds, England.

A torsion machine, built by Tinius Olsen & Co., Philadelphia, for testing the strength and elasticity of shafting. This machine will twist shafts up to 16 feet in length and 2 inches in diameter.

A hand power torsion machine of simple mechanical construction, specially designed for the testing of short shafts of a maximum diameter of one inch.

A Riehle transverse testing machine of 5,000 pounds capacity, adapted to specimens up to 48 inches in length.

A Riehle compressometer, with spherical seat attachment for the adjustment of specimens having slightly non-parallel faces. This compressometer will receive specimens up to 10 inches in length.

An Olsen compression micrometer of standard type.

A 20,000 pound Olsen, hand power, wire testing machine, specially fitted for testing wooden columns with both fixed and pivoted ends.

A Riehle abrasion cylinder, built to the standard required by the National Brick Makers ' Association, adopted in 1901.

A Page Impact Machine for testing the toughness of road metals.

A diamond core-drill for preparing specimens for the Page impact machine.

A two-cylinder Deval abrasion machine for testing the wear-resisting properties of road materials.

A Berry strain-gauge for spans of 3 inches and 8 inches.

A Nalder dividing engine. This may be used either for the precise division of scales or for the calibration of instruments intended for refined measurement.

A large number of extensometers of the usual degree of precision. These include the Bauschinger, Martens, Unwin, Ames, Riehle, Johnson, Henning (recording) and other types. In addition there are the usual scales, micrometers, telescopes and reflectors, voltmeters for the determination of metallic contract, and such other appliances as are necessary in the making of precise measurements.

The shop is equipped with a number of high-class machine tools specially fitted for reducing the specimens to the requisite shapes and dimensions with a minimum of hand labour. It is also supplied with the necessary appliances for making ordinary repairs and for making apparatus for special experiment and original investigation.

CEMENT TESTING LABORATORY.

This laboratory is fitted with all the ordinary moulds, sieves, balances, burettes, steaming and drying tanks, tables, and other appliances necessary in making the usual physical tests of a Portland cement. It is also supplied with completely equipped cabinets for individual work. In addition there are the following:—

A Riehle 2,000 lb. machine fitted for either tension or compression.

A 2,000 lb. Riehle shot machine for tension.

A 2,000 lb. Fairbank's shot machine for tension.

A 1,000 lb. Olsen automatic shot machine fitted for tests in either tension or cross breaking.

An Olsen soapstone moist closet of modern design.

METEROLOGICAL LABORATORY.

The department of surveying and geodesy is provided with all the ordinary field instruments, such as transits, levels, compasses, micrometers, sextants, planimeters, plane tables, tapes, chains, etc., with which is carried on the instruction in practical field operations as detailed elsewhere.

A small laboratory is also established in the basement of the observatory described below, containing the necessary instruments for the refined measurements of geodetic surveying; as, a standard yard and metre, a Rogers 10 foot comparator, a Kater's pendulum with vacuum chamber, a level trier, micrometer, microscopes, etc.

The geodetic observatory in connection with this department is used for the instruction of students of the fourth year in taking observations for time, latitude, longitude, and azimuth by the precise methods used in connection with a geodetic survey. It contains a 10 inch theodolite and zenith telescope by Troughton & Simms; an astronomical transit instrument and

an 8 inch theodolite by Cooke; an electro-chronograph; a Howard astronomical clock; a Dent sidereal break-circuit chronometer; arithmometers, etc.

GEOLOGICAL AND MINERALOGICAL LABORATORIES.

In the Chemistry and Mining building on College Street the University possesses a modern laboratory for Geology and Mineralogy.

Courses are given in laboratory work, especially in personal examination of type sets of rocks, fossils, minerals and crystal models. These laboratory exercises serve to illustrate the introductory didactic instruction.

For the encouragement of pure crystallography the laboratories are supplied with goniometers of the various types, crystal models, appliances for the cutting of oriental crystal sections and for the physical examination of the same. Practical petrography is carried on in rooms provided with type sets of rocks, both macroscopic and microscopic. Advanced students are taught to make thin sections of rocks and fossils and to study them microscopically. For students in Mining a laboratory course in the interpretation of geological maps and sections is provided. Typical mining regions are studied in detail and an opportunity is afforded for the examination of specimens illustrating economic geology.

The laboratory for the preparation of thin sections of rocks, minerals and fossils is provided with electric diamond saws and grinding appliances for the various types of work incidental to the preparation of thin sections and museum material.

A room is also provided for advanced work in cartography and geological surveying.

The departments possess 28 petrological microscopes and 5 of other types so that it is now possible to provide advanced students with instruments and sets of thin sections for their own especial use. The blowpipe laboratory contains 156 lockers, especially designed for apparatus for students.

MUSEUM.

The Geological and Mineralogical Museum of the University is open to students of the Faculty of Applied Science, and is also accessible to the general public from 9 to 5. p.m. throughout the year.

The Museum is situated in the south-east corner of the ground floor of the Chemistry and Mining building, and may be entered from the door at that corner of the building.

The southern half of the room is occupied by the cases of the palæontological collection in which are arranged a large series of fossils. These specimens are placed so as to display together the great groups of animals, while the minor divisions are based on stratigraphical grounds. Particularly worthy of note are the fine series of Crinoids and Cystids and the type specimens of Cambrian fossils from Eastern Canada. A large part of this

collection is due to the generosity of Sir Edmund Walker and Sir Wm. Mackenzie. On the walls of the museum have been placed some excellent specimens of large extinct vertebrates.

To the north of the fossil collection is the Ferrier Cabinet of Minerals containing good examples of nearly all the minerals known to science, as well as a special case with specimens of the various minerals from the Cobalt Mining District.

The northern part of the room is occupied by twenty cases exhibiting all the important rocks both igneous and sedimentary which go to make up the crust of the earth.

Around the walls are placed cases containing the chief economic mineral products arranged in accordance with their practical application to human activities. This collection is particularly rich in specimens from Ontario localities and includes most of the material formerly exhibited in the Engineering building.

LIBRARY.

Rooms have been set apart in the Engineering and the Chemistry and Mining buildings for the housing of such periodicals and other literature of the University Library as is of special interest to the students of this faculty.

SOCIETIES.

THE ENGINEERING SOCIETY OF THE UNIVERSITY OF TORONTO.

Officers for 1911-1912.

President.....J. E. Ritchie.
1st Vice-President.....W. T. Curtis.
Vice-Pres. Civil & Archl. Secs.....F. S. Rutherford.
" *Mechanical & Elec. Secs*.....M. F. Verity.
" *Chemistry & Mining Secs*.....G. M. Smyth.
Recording Secretary.....I. M. Macdonald.
Corresponding Secretary.....C. C. Rous.
Treasurer.....H. R. MacKenzie.
Permanent Secretary.....H. Irwin, B.A.Sc.
Curator.....G. Rankin.
Fourth Year Representative.....H. A. Hawley.
Third Year Representative.....H. N. Macpherson.
Second Year Representative.....T. W. Crane.
First Year Representative.....To be elected.
Senior Varsity Representative.....J. A. P. Marshall.

The Society meets every second Wednesday during the academic year. Papers are read, and discussions are held on engineering subjects. The Society publishes a pamphlet monthly during the year, containing the best papers read at the meetings. A supply department is conducted by the Society, on a co-operative plan through which instruments, drafting supplies, stationery, etc., may be purchased at a low cost.

UNIVERSITY OF TORONTO ELECTRICAL CLUB, 1911-1912.

President.....F. C. De Guerre.
Vice-President.....R. J. Allen.
Secretary-Treasurer.....P. G. Welford.
Councillors.....C. A. Webster.
R. A. Story.
C. C. Rous.

The Society meets every second Thursday evening during the academic year for the discussion of papers relating to mechanical and electrical engineering problems too technical for consideration in the Engineering Society. The membership is limited to members of the senior and final years.

ATHLETIC ASSOCIATION OF THE FACULTY OF APPLIED SCIENCE.

EXECUTIVE COMMITTEE, 1911-1912.

Honorary President.....Dean Galbraith.
President.....W. H. Wylie.
Vice-President.....F. J. Mulqueen.
Secretary-Treasurer.....W. J. T. Wright.
Fourth Year Representative.....A. Wardell.
Third Year Representative.....A. G. Gray.
Second Year Representative.....D. B. Gardner.
First Year Representative.....M. Levy.

The Athletic Association has full control over all athletic clubs using the name of the Faculty of Applied Science. The Executive Committee has power to suspend any one from the privileges of membership in the Association for any breach of its regulations, and controls the finances of all athletic clubs in the aforesaid Faculty. The annual membership fee of this Association is fifty cents.

No other moneys are collected for the support of athletics in the Faculty of Applied Science without the sanction of the Executive Committee.

LODGING AND BOARD.

Accommodation is readily obtainable in numerous private boarding-houses within convenient distance of the University, at a cost of from four dollars and a half a week upwards for comfortable lodging with board; or rooms may be rented at a cost from one dollar and a half per week upwards, and board obtained separately at moderate rates. A list of accredited boarding-houses is kept by the Secretary of the University Young Men's Christian Association, and students are recommended to consult him with reference to the selection of suitable accommodation.

UNIVERSITY RESIDENCES.

By the generosity of Mr. and Mrs. E. C. Whitney and other friends, the University can now offer to some hundred and fifty men the peculiar advantages of residential life and excellent accommodation within its own grounds. The Residence, opened in November, 1908, consists of three Houses situated on the north side of Hoskin Avenue, opening upon a quadrangle, the fourth side of which is formed by Devonshire Place. They stand about two hundred yards to the north of University College and of the University Dining Hall and close to the University Gymnasium and Athletic Field. The buildings are known as the South, East and North Houses.

Each House contains twenty-four single rooms, one single suite, one double room and eleven suites, a suite comprising a study and two bed rooms. A large room in each building, with an open hearth and a library, has been set aside as a common room. A lavatory with hot and cold shower baths is provided for every eight men. The buildings are heated by steam and lighted by electricity.

The University supplies the table, chairs, book-case, chiffonier, bed, mattress, pillows, linen and window shades for each room; it is prepared to furnish a drop-light for a nominal rental.

Each occupant is charged $2.50 room-rent per week, payable to the Bursar four weeks in advance. The charge for each single suite is $3.50 per week. These charges cover heat, light, house-service, house-laundry, and the use of the telephone. There is no separate dining hall connected with the Residence, but board may be obtained at the adjacent University Dining Hall for $3.00 per week.

Applications for rooms must be made in writing to the Secretary of the Residence Committee (address the Registrar's Office) and must be accompanied by a deposit of $5.00. This deposit will be returned if the application be not granted or if the application be withdrawn in writing before September 8th. It will be returned in full at the end of the College year if the room key be given back and the room and furniture left in a satisfactory condition. The following principles govern the allotment of rooms: (i) No student, who as the result of the annual spring examinations is not assured of being able to proceed to the subsequent year, will be admitted into the Residence. (ii) The rooms in each House will be distributed proportionately between the various Faculties and Years. (iii) Rooms will be reserved for members of the incoming First Year until September 18th. (iv) Applications will be considered in order of priority.

The University lays down three general rules, designed to prevent hazing. the use of intoxicants and gambling. The students in each House shall elect a House Committee, which is entrusted by the University with the making and enforcing of any other needed rules and with the maintenance of order. A member of the Faculty resides in each House to act as friend and adviser to the men in residence.

GYMNASIUM AND ATHLETIC GROUNDS.

"The University gymnasium was completed and equippped in 1893. It is fully provided with the best and most modern appliances for physical culture, and contains a running track, shower baths and swimming bath, besides the necessary dressing rooms and other conveniences. A competent instructor in gymnastics is in constant attendance to superintend and direct the exercises of students. In addition to the lawn in front of the Main University Building and a campus in the rear, a large plot of ground on Devonshire Place has been set apart as an athletic field. By this addition the facilities for football, cricket, tennis and other out door athletic sports are doubled, as compared with previous accommodation; and by these grounds, in conjunction with the gymnasium, ample opportunity is afforded to all students for healthful exercise and physical development. To assist in meeting the expenses of the gymnasium, a nominal annual fee is imposed on those who avail themselves of its advantages. The supervision of all athletic matters has been entrusted by the Council to an Athletic Board, consisting of six members appointed from the Faculty and officers of the Athletic Association. All applicants of clubs for the use of grounds must be made annually to this Board. All such applications must be accompanied by a list of officers. In the case of new clubs the list of officers must be accompanied by particulars as to the organization and objects of the club making application."

STUDENTS' UNION BUILDING.

"In 1894 additions were made to the front of the building in which the gymnasium is situated, consisting of a large hall for public meetings, a reading room and committee rooms. This additional accommodation is available for the work of the various students' societies, and for academic purposes. Applications for the use of rooms, accompanied by a list of officers and a copy of the constitution of the society making application, must be made, through the President, to the joint committee of the Councils on Gymnasium and Students' Union Building, at the beginning of the season, or from time to time as occasion requires. Arrangements have also been made by which recognized societies may obtain the use of committee rooms on application to the janitor of the Students' Union Building."

L. B. STEWART, O.L.S., D.T.S., *Professor of Surveying & Geodesy.*	161 Admiral Rd.

J. J. TRAILL, B.A.Sc., 34 Wolfrey Ave.
Lecturer in Hydraulics.

W. M. TREADGOLD, B.A., 13 Woodlawn Ave. E.
Lecturer in Surveying.

C. H. C. WRIGHT, B.A.Sc., MEM. O.A.A., 419 Markham St.
Professor of Architecture.

Sessional Appointments.

L. M. ARKLEY, M.Sc., A.M. CAN. SOC. C.E., 61 Indian Road Cres.
Lecturer in Mechanical Engineering.

L. A. BADGLEY, B.A.Sc., 1055 Bathurst St.
Fellow in Surveying.

W. J. BAIRD, B.A.Sc., Scarboro.
Fellow in Surveying.

MISS H. BAMFORD 64 St. Alban St.
Fellow in Chemistry.

J. L. BANKS, 304 Jarvis St.
Instructor in Modelling.

E. W. BANTING, B.A.Sc., 330 St. George St.
Lecturer in Surveying.

W. S. BISHOP, A.B. (CORNELL) 69 Havelock St.
Lecturer in Metallurgical Engineering.

A. R. BONHAM, 47 Harbord St.
Fellow in Chemistry.

F. W. BRUCKMILLER, A.B. 47 Howland Ave.
Demonstrator in Electrochemistry.

J. T. BURT-GERRANS, B.A., 46 Dewson St.
Lecturer in Electrochemistry.

A. G. CODE, B.A.Sc., 333 Davenport Rd.
Demonstrator in Electrical Engineering.

F. C. DYER, B.A.Sc., 148 John St.
Demonstrator in Mining Engineering.

W. S. FERGUSON, C.A., 52 Tranby Ave.
Lecturer in Accountancy.

J. B. K. FISKEN, B.A.Sc., 60 Madison Ave.
Demonstrator in Drawing.

W. S. GUEST, B.A.Sc., 28 St. Joseph St.
Lecturer in Electrical Engineering.

R. H. HOPKINS, B.A.Sc., 173 College St.
Demonstrator in Electrical Engineering.

A. N. HUNTER, B.A.Sc., 121 Dovercourt Rd.
Demonstrator in Electrical Engineering.

H. HYATT, B.A.Sc., 47 Elm Grove.
Fellow in Drawing.

M. B. JACKSON, 7 Nanton Ave.
Lecturer in Mechanical Engineering.

C. W. JEFFERYS, A.R.C.A., MEM. O.S.A., York Mills.
Instructor in Freehand Drawing & Water Colour.

S. A. KENNEDY, B.A., 289 Huron St.
Assistant in Physics.

J. T. KING, B.A.Sc., 346 Woodville Ave.
Assistant in Mining Engineering.

J. T. LAGERGREN, M.E., 148 Carlton St.
Lecturer in Machine Design.

H. M. LANCASTER, B.A.Sc., 22 Palmerston Gardens.
Demonstrator in Chemistry.

J. M. LANGSTAFF, C.A., F.I.A., F.A.S., 666 Bathurst St.
Lecturer in Accountancy.

T. R. LOUDON, B.A.Sc., 107 Sheldrake Rd., Eglinton.
Lecturer in Metallurgy.

R. V. MACAULAY, B.A.Sc., 11 Barton Ave.
Demonstrator in Electrical Engineering.

J. A. MACDONALD, B.A.Sc., 557 Palmerston Ave.
Fellow in Surveying.

A. WELLESLEY MCCONNELL, B.A.Sc., 35 Chicora Ave.
Lecturer in Architectural Design.

H. H. MADILL, B.A.Sc., 23 Grange Rd.
Demonstrator in Drawing.

R. J. MARSHALL, B.A.Sc., 119 Balmoral Ave.
Demonstrator in Applied Mechanics.

J. W. MELSON, B.A.Sc., 239 Beverley St.
Demonstrator in Drawing.

P. W. MUELLER, B.A., 96 Warren Rd.
Instructor in German.

J. H. PARKIN, B.A.Sc., 35 Wardell St.
Demonstrator in Mechanical Engineering.

M. PEQUEGNAT, B.A.Sc., 38 Kenneth Ave.
Demonstrator in Drawing.

L. J. ROGERS, B.A.Sc., 662 Bathurst St.
Demonstrator in Chemistry.

L. T. RUTLEDGE, B.A.Sc., 320 Concord Ave.
Demonstrator in Drawing.

W. J. SMITHER, B.A.Sc., 64 St. Alban St.
Demonstrator in Drawing.

R. B. STEWART, M.A., 175 McCaul St.
Lecturer in Mining Engineering.

R. TAYLOR, B.A.Sc., 8 Cross St.
Demonstrator in Electrical Engineering.

G. L. WALLACE, B.A.Sc., 58 Parkway Ave.
Demonstrator in Physics.

F. E. WATSON, B.A.Sc., 447 Manning Ave.
Demonstrator in Drawing.

W. S. WICKENS, B.A.Sc., 89 Kendal Ave.
Fellow in Drawing.

E. R. WILLIAMS, B.A.Sc., 43 Kendal Ave.
Fellow in Chemistry.

G. K. WILLIAMS, B.A.Sc., 147 Gore Vale Ave.
Demonstrator in Drawing.

G. R. WORKMAN, 121 Essex St.
Fellow in Drawing.

W. J. T. WRIGHT, B.A.Sc., 419 Markham St.
Demonstrator in Drawing.

A. W. YOUELL, B.A.Sc., 85 St. George St.
Demonstrator in Mechanical Engineering.

A. YOUNG, B.A.Sc., 85 Lappin Ave.
Demonstrator in Applied Mechanics.

C. R. YOUNG, B.A.Sc., A.M. CAN. SOC. C.E., 113 Winchester St.
Lecturer in Structural Engineering.

A. R. ZIMMER, B.A.Sc., 38 Delaware Ave.
Demonstrator in Electrical Engineering.

MEMBERS OF OTHER FACULTIES GIVING INSTRUCTION TO STUDENTS IN APPLIED SCIENCE.

F. B. ALLAN, M.A., PH.D., 380 Brunswick Ave.
Associate Professor of Organic Chemistry.

J. A. AMYOT, M.B., 4 Laburnum Ave.
Professor of Hygiene.

ALFRED BAKER, M.A., 81 Madison Ave.
Professor of Mathematics.

B. A. BENSLEY, B.A., PH.D., 316 Brunswick Ave.
Associate Professor of Zoology.

C. A. CHANT, M.A., PH.D., 201 Madison Ave.
Associate Professor of Astro-Physics.

A. P. COLEMAN, M.A., PH.D., 476 Huron St.
Professor of Geology.

A. T. DELURY, M.A., University of Toronto.
Professor of Mathematics.

J. H. FAULL, B.A., PH.D., 102 Yorkville Ave.
Associate Professor of Botany.

A. G. HUNTSMAN, B.A., M.B., 210 Fern Ave.
Lecturer in Biology.

W. J. LOUDON, B.A., 133 Walmer Rd.
Professor of Mechanics.

M. A. MACKENZIE, M.A., PH.D., 1 Bellwoods Park.
Associate Professor of Mathematics.

W. L. MILLER, B.A., PH.D., 50 St. Alban St.
Professor of Physical Chemistry.

W. A. PARKS, B.A., PH.D., 69 Albany Ave.
Associate Professor of Geology.

A. L. PARSONS, B.A., 384 Brunswick Ave.
Lecturer in Mineralogy.

T. L. WALKER, M.A., PH.D., 62 Maple Ave.
Professor of Mineralogy and Petrography.

E. M. WALKER, B.A., M.B., 67 Alcina Ave.
Lecturer in Zoology.

Sessional Appointments.

P. BALBAUD, B. ès L., 626 Huron St.
Lecturer in French.

S. BEATTY, M.A., 22 Alvin Ave.
Lecturer in Mathematics.

E. A. HODGSON, B.A., 61 Huntley St.
Fellow in Mathematics.

A. MACLEAN, B.A., 102 College St.
Lecturer in Geology.

I. R. POUNDER, B.A., 614 Bathurst St.
Fellow in Mathematics.

J. E. THOMSON, B.A.Sc., 57 Queen's Park.
Demonstrator in Mineralogy.

W. H. WYLIE, B.A.Sc., 35 North St.
Fellow in Mineralogy.

E. J. WHITTAKER, B.A., 249 McCaul St.
Fellow in Geology.

FACULTY OF APPLIED SCIENCE AND ENGINEERING.

Historical Sketch.

The Legislative Assembly during the Session of 1877 gave its sanction to the establishment of a School of Practical Science on the basis proposed in the memorandum of the Minister of Education confirmed by the Lieutenant-Governor in Council on the 3rd day of February, 1877.

By the scheme thus approved of, Government effected an arrangement with the Council of University College whereby the students of the School of Practical Science enjoyed full advantage of the instruction given by its professors and lecturers in all the departments of science which were embraced in the work of the School.

This arrangement was brought to an end in 1889 by the transfer of the department of science above referred to, from University College to the University of Toronto under the operation of the University Federation Act.

In order that the students of the School might continue to enjoy the advantage of the instruction of the above departments, the Senate of the University of Toronto passed a Statute in October, 1889, affiliating the School to the University, which Statute was confirmed by the Lieutenant-Governor on the 30th day of October, 1889.

By an Order-in-Council, approved by the Lieutenant-Governor, on the 6th day of November, 1889, a Principal was appointed, and the management of the School was entrusted to a council composed of the Principal as chairman, and the Professors, Lecturers and Demonstrators appointed on the Teaching Faculty of the School.

By the terms of this order the management and discipline of the School was vested in the Council.

By a Statute of the Senate of the University of Toronto, passed on December 14th, 1900, the teaching staff and examiners of the School of Practical Science, together with the examiners for the degree of B.A.Sc., and professional degrees in Engineering, were constituted ex-officio the Faculty of Applied Science and Engineering of the University of Toronto.

By an Order-in-Council dated the 30th day of January, 1903, the Council of the School was made to consist of the Principal, the Professors and Lecturers, together with the Registrar.

By the University Act, 1906, the School of Practical Science was united to the University of Toronto as its Faculty of Applied Science and Engineering.

GRADUATING DEPARTMENTS.

There are eight regular Departments of Instruction leading to the degree of Bachelor of Applied Science:—

1. Civil Engineering.
2. Mining Engineering.
3. Mechanical Engineering.
4. Architecture.
5. Analytical and Applied Chemistry.
6. Chemical Engineering.
7. Electrical Engineering.
8. Metallurgical Engineering.

The instruction given in these departments extends over a period of four years and is designed to give the student a thorough knowledge of the scientific principles underlying the practice in the several professions, and also such training as may make him immediately useful when he commences professional work.

DEGREE OF MASTER OF APPLIED SCIENCE (M.A.Sc.).

Graduates holding the degree B.A.Sc. may, on an additional year's attendance as a student, proceed to the degree M.A.Sc. (See page 75.)

PROFESSIONAL DEGREES.

Bachelors of Applied Science may, after three years spent in professional work, present themselves for the degrees of Civil Engineer (C.E.), Mining Engineer (M.E.), Mechanical Engineer (M.E.), Electrical Engineer (E.E.), Chemical Engineer (Chem. E.), as the case may be, subject to the rules and regulations established by the University. (See page 75.)

FELLOWSHIPS.

Fellowships of the value of $500 each, open to graduates, are offered annually in the various departments.

Applications for these fellowships are to be made annually in writing to the Secretary of the Faculty on or before the 1st day of May.

SCHOLARSHIP.

The Boiler Inspection and Insurance Company of Canada offers a Scholarship in the Department of Mechanical Engineering of the value of $130.00 to the student who obtains highest Honour Standing in the regular examinations of the third year.

The successful candidate will be expected to proceed to his fourth year during the session next following the date of the award.

The amount of the award will be credited by the Bursar to the fees of urth year of the successful candidate.

Research Fellowship.

Two research Fellowships of the value of $500 each are offered annually by the Alumni Association of the Faculty of Applied Science and Engineering.

I. MATRICULATION.

1. The matriculation requirements of this Faculty are based upon those given in the curriculum for Junior Matriculation, a copy of which may be obtained on application.

2. A candidate for matriculation must produce satisfactory certificates of good character.

3. The subjects are as follows:

English, History, any three of the following, viz., Greek, Latin, French, German, Experimental Science, with pass standing in Honour Mathematics.

In selecting the options it is recommended that students take French, German and Experimental Science. In the department of Architecture French is required, in Applied Chemistry and Chemical Engineering German is required, and in Mechanical Engineering it is desirable that students take German.

4. The pass standard is forty per cent. of the marks assigned to a paper, with an average of sixty per cent.

5. A candidate who has obtained an average of sixty per cent. on all the papers but has failed to obtain forty per cent. in not more than two papers may complete matriculation by passing on these papers at any one subsequent examination.

6. A candidate who has obtained forty per cent. on each of at least eight papers, with an average of sixty per cent. on the same, will be credited with these papers. In order to complete his Matriculation, he must obtain at one subsequent examination, forty per cent. on each of the remaining papers, with an average of sixty per cent.

7. The examination for pass and honour Junior Matriculation is held annually in June at centres in Ontario, and, if application is made to the Senate, the examination may, with the co-operation of the Department of Education, be held at centres outside Ontario.

8. Applications accompanied by the fee of $5.00 must be sent not later than the 15th of May to the local Public School Inspector, or in the case of candidates intending to write at the University, to the Registrar.

9. A Junior Matriculation examination, at which no honour papers are set, will be held in September at the University and at such other centres as may from time to time be authorized. Candidates entitled to the privileges of supplemental examinations as well as new candidates, may present themselves at this examination.

10. Applications to write on the September examination, together with the necessary fee, must be received at the Department of Education not

later than September 1, for those who wish to write at any centre established in Ontario, and not later than August 1 for any centre elsewhere in Canada.

11. Forms of application, the time-table of the September examination, and further particulars may be had upon application to the Department of Education.

II. ADMISSION.

A candidate for admission must have completed the seventeenth year of his age on or before the first of October of the year in which he seeks to enter.

Applications for admission must be made on blank forms supplied by the Registrar, and should be forwarded early in September.

Applications will be considered from (*a*) those who have completed matriculation, including those who hold certificates recognized as equivalent —see matriculation curriculum—, (*b*) those who have failed in not more than two papers of the matriculation examination. The latter must complete matricluation before being eligible to enter the second year.

Applications based upon other certificates than those mentioned will be considered as occasion may require. Such certificates must be accompanied by an official statement of the marks in the various subjects upon which the certificate was granted.

ADMISSION AD EUNDEM STATUM.

An undergraduate of another University may be admitted *ad eundem statum* on such conditions as the Senate on the recommendation of the Council of the Faculty may prescribe.

An applicant for admission *ad eundem statum* must submit with his petition (1) a calendar of his University giving a full statement of the courses of instruction; (2) an official certificate of character and academic standing.

III. REGISTRATION.

Registration in the various years will begin Sept. 1st. Blank cards for the purpose will be supplied by the Secretary on request.

IV. FEES.

All fees are payable at the Bursar's office between the hours 10 a.m. and 1 p.m. of each week day except Saturday.

The annual fees including tuition, library, laboratory supplies and one annual examination shall be as follows:—

First Year.

If paid in full on or before November 5th	$100.00
By instalments:	
First instalment, if paid on or before November 5th	50.00
Second instalment, if paid on or before February 5th	55.00

Second Year.

If paid in full on or before November 5th	$110.00
By instalments:	
First instalment, if paid on or before November 5th	55.00
Second instalment, if paid on or before February 5th	60.00

Third and Fourth Years.

If paid in full on or before November 5th	$120.00
By instalments:	
First instalment, if paid on or before November 5th	60.00
Second instalment, if paid on or before February 5th	65.00

Repeating the Year.

If paid in full on or before November 5th	50.00

The above fees are payable in advance. After November 5th a penalty of $1.00 per month will be imposed until the whole amount is paid. In the case of payment by instalments the same rule as to penalty will apply.

Students desiring to pay in instalments must have paid the fees due in the first term before proceeding to the work of the second term.

General Fees.

Matriculation, or registration of Matriculation	$5.00
Supplemental examination	10.00
Admission ad eundem statum	10.00
Degree of B.A.Sc. (Payable not later than April 1st)	10.00

Dues and Deposits.

(Payable to the Secretary of the Faculty at the time of registration.)

Engineering Society membership	$1.00
Annual deposit	2.00

Charges for waste, neglect and breakage are to be met out of the deposit fee, the balance of which will be refunded to the student at the end of the session.

GENERAL INFORMATION FOR STUDENTS.

The Council of University College, and the governing bodies of the federated universities and colleges, respectively, have disciplinary jurisdiction over and entire responsibility for the conduct of their students in respect of all matters arising or occurring in or upon their respective college buildings and grounds, including residences.

The councils of such of the faculties as have assigned for their separate use any building or buildings and grounds, including residences, have disciplinary jurisdiction over and entire responsibility for the conduct of all students in their respective faculties in respect of all matters arising or occurring in or upon such building, or building and grounds.

In all such cases, and, save as aforesaid, as respects all students to whatsoever college or faculty they may belong, disciplinary jurisdiction is vested in the Caput, but the Caput may delegate its authority in any particular case or by any general regulation to the council or other governing body of the university or college or faculty to which the student belongs.

The Caput has also power and authority to determine by general regulations, or otherwise, to what college, faculty or other body the control of university associations belongs.

If there be any question as to the proper body to exercise jurisdiction in any matter of discipline which may arise, the same shall be determined by the Caput, whose decision shall be final.

Disciplinary jurisdiction includes the power to impose fines.

REGULATIONS RESPECTING STUDENTS.

No student will be enrolled in any year, or be allowed to continue in attendance, whose presence for any cause is deemed by the Council to be prejudicial to the interests of the University.

All interference on the part of any student with the personal liberty of another, by arresting him, or summoning him to appear before any tribunal of students, or otherwise subjecting him to any indignity or personal violence, is forbidden by the Council. In particular, students of all Faculties are warned against the practices known as the "hustling" of freshmen and against inter-year or inter-faculty "hustles". Any student convicted of participation in such proceedings will render himself liable to expulsion from the University.

Any student who may be convicted of having taken part in processions through the city, which have not been authorized by the police authorities after application by the Executive of the Students' Parliament, will be severely disciplined.

All students shall be in attendance during the whole of each term. Those whose attendance or work is reported as unsatisfactory are liable to dismissal by the Council.

No student will be allowed to repeat the work of any year more than once.

Information as to the text books, instruments and materials to be purchased by the students will be given on registration at the beginning of the session.

OPTIONS.

In departments 1, 2, 3 and 7 of the first and second years, students have the option of taking either French or German. The selection made for the first year must be continued during the second year.

In department 1 of the third year, in addition to the regular subjects, Biology will be required of those who intend to follow Sanitary work in the fourth year.

In department 5, second year, an option is permitted between Biology and Calculus as the student, upon consultation with the head of the department in Chemistry, may decide.

In the fourth year, optional courses are arranged in certain departments. Students are required to submit their selection to the Secretary in writing, not later than September 15th. The proposed selection must be approved by Council before adoption.

REGULATIONS RESPECTING EXAMINATIONS.

Regular Examinations.

A student who in either term of the session fails to perform the work of his course in a manner satisfactory to the professors in charge, will not be allowed to present himself at the final examinations of the year.

Candidates are required to send to the Secretary of the Faculty at least three weeks before the commencement of the annual examinations in April, notice in writing of their intention to take such examinations. A penalty of $1.00 will be imposed upon all candidates who fail to give notice within the proper time.

In the second, third and fourth years annual examinations will be held at the beginning of the second term on all subjects completed during the first term.

No student will be allowed to write at the annual examinations who has not paid all fees and dues for which he is liable.

The minimum percentage of marks required to pass in the written examination will be fixed from time to time by the Council.

The minimum percentage of marks required to pass in the practical work connected with any subject shall be one and on -half times the minimum required in the case of a written examination.

In order to pass the practical examinations in the subjects of applied mechanics, descriptive geometry, electrical design, optics, surveying and architecture, the drawings set in these subjects must be made.

Candidates who fail in passing the annual examinations will be required to take again the whole course of instruction, both theoretical and practical, of the year in which they fail before presenting themselves a second time for examination.

Term Examinations.

In the first year only, term examinations in four subjects will be held on the last two days of the first term.

The subjects will not be announced until the day previous to the first examination.

The results of these examinations will be incorporated with those of the annual examinations in the same subjects in the ratio of 1 to 2.

Supplemental Examinations.

A candidate who fails in one or two subjects at the Annual Examinations, will be required to take supplemental examinations in such subjects.

The supplemental written examinations will begin on the 17th of September, 1913. Candidates are required to send to the Secretary of the Faculty not later than the first of September, notice in writing of their intention to take such examinations, and to remit to the Bursar the fee of $10.00.

In the case where a candidate fails to pass a supplemental examination it will count as one of the two supplemental examinations which may be allowed him after the next annual examination.

Vacation Work.

Vacation work must be handed in on or before the first day of the session.

Vacation notes must be on construction only, except in Department 2 (see p. 75), and contain not less than twenty, nor more than thirty pages of sketches. These sketches must be free-hand pencil drawings with figured dimensions.

Notes must be made in standard note books approved of by the Faculty. Notes which have been taken during the session in connection with the work in drawing will not count as vacation work.

The minimum percentage of marks required for practical work must be made in the case of vacation notes.

Shop Work.

Students in Mechanical and Electrical Engineering are not considered as having completed their course of study, nor are Degrees granted, until certificates have been submitted to the Council, and accepted as satisfactory, showing not less than eight months of mechanical experience in production of some kind under commercial conditions. Preferably the work undertaken should be in one of the manufacturing industries or trades with which the Course is related.

It is not desirable that any student in these Courses should enter sales or other non-production departments of the engineering industries without having acquired some personal experience in mechanical production. It is best to obtain this experience under commercial conditions. Otherwise one can not at all appreciate shop conditions and limitations.

Honours.

Honours will be granted in each department to the students who pass in all the subjects and obtain at least 66 per cent. of the total number of marks allotted to the department at the annual examinations.

Papers read before the Engineering Society may be considered in granting Honours.

REGULATIONS RESPECTING TERM WORK.

Students working in any laboratory must be governed by the regulations relating thereto as made known from time to time.

No laboratory reports or drawings may be removed from the laboratories without permission. The Council reserves the right to dispose of them as may be thought proper.

Field Work.

No field notes will be counted which have not been taken in the field, and during the hours allotted to such work.

Students taking practical astronomy are required to take observations in the field for time, latitude, and azimuth.

Drafting Rooms.

Drawings prescribed for the first term of the session will not be counted unless finished in that term.

The minimum number of drawings in first and second years shall be twenty-five, and the maximum number thirty-five, except in the Department of Analytical and Applied Chemistry, in which the number shall be fifteen and twenty-five respectively.

No drawings will be counted which have not been made in the drafting rooms, and during the hours allotted to such work.

Theses.

In the Fourth Year each student is required to prepare a thesis on a subject approved by the Council. The title of the thesis must be sent to the Secretary of the Faculty for approval on or before November 1st, and the completed thesis must be handed in not later than the first day of the second term and shall become the property of the University. The rules governing size, form, etc., may be obtained on application to the Secretary.

EXEMPTIONS.

Applications for exemption from any of the regulations must be made to the Council in writing and the particulars of the case fully stated.

1. DEPARTMENT OF CIVIL ENGINEERING.

The courses of study in Civil Engineering are designed to give the student a sound training in the fundamental scientific principles on which the practice of the profession is based. The instruction is given by means of lectures and practical work in the field, the drafting room and the laboratory. In this way the student is led to apply the principles developed in the class room.

Formerly the term Civil Engineering included all the branches of the profession, but some of these became so extensive as to require distinctive names and fields of work for themselves. Even yet Civil Engineering is so comprehensive as to render it impossible for any one to master all its branches. It may be said to include surveying and topography; works connected with transportation, such as railroads and canals; municipal works, such as waterworks, sewers, streets and pavements; hydraulic works, such as power development, drainage, irrigation, etc.; structural works, such as bridges, roofs, etc.

Notwithstanding the variety of the branches of Civil Engineering above enumerated, they are underlaid by a comparatively compact body of scientific principles which form the basis of the work of instruction. While the subjects of the first year are largely fundamental, an effort is made to give a professional aspect to the student's work from the very beginning. This is accomplished by the introduction of such subjects as field work and plotting in the curriculum of the first year. In the second and third years the study of fundamental science is continued, together with its application to the solution of engineering problems. In the fourth year the student may elect to follow certain optional subjects which form a continuation of the work of the previous years. Here special stress is laid upon experimental work in the laboratory.

2. DEPARTMENT OF MINING ENGINEERING.

The course in Mining Engineering is intended to serve as a preliminary training for those who expect to practise the art of mining or metallurgy. In the first two years it differs very little from the course in civil engineering, in the third year some subjects peculiar to mining and metallurgy are taken up.

In general this course is designed to first give the student a good training in the parts of engineering essential to all branches, such as surveying, drafting, etc., and then in the upper years to allow him to follow studies peculiar to mining engineering.

Candidates for the degree in this department will be required to present satisfactory evidence of having had at least six months' practical experience in work connected with mining, metallurgy or geology, for which they must have received regular wages. Certificate forms, giving full details as to acceptable classes of work, will be furnished on application, and should be obtained by all students before entering employment.

3. DEPARTMENT OF MECHANICAL ENGINEERING.

The course in this Department is designed to meet the needs of those students who are intending to take up the work connected with Mechanical Engineering such as: the design of gas engines, steam engines, steam boilers, steam turbines, air compressors, etc.; the design and installation of the machinery connected with power plants and central stations, steam piping and other similar problems. The work is also so arranged that the student becomes somewhat familiar with the design of travelling cranes and mill buildings and similar problems connected with structural steel work.

Since the work of the mechanical engineer and of the electrical engineer are closely allied, the courses in these two departments in the first two years are identical and cover the subjects mentioned below.

In the third year the work becomes more specialized, the mechanical engineers paying more attention to heat engines of various types, and to mill building design and other work of similar nature. The study of electricity is continued and the student gets considerable practice in the mechanical and electrical laboratories.

In the fourth year the student devotes himself still more closely to his chosen work, placing the greater stress on thermodynamics and the theory and testing of heat engines, and problems in machine design. Much time is spent in the mechanical laboratories testing gas and steam engines and other machines.

Candidates for the degree in this department are required to present satisfactory evidence of having had at least eight months' practical experience in one of the principal trades connected with Mechanical Engineering, the object being that graduates may have some practical knowledge of the duties of the workman in this branch of engineering, as distinguished from those of the purely technical man. Certificate forms will be furnished on application. These forms contain full details in regard to the work required.

4. DEPARTMENT OF ARCHITECTURE.

The instruction in this department is arranged to lay a broad foundation for the subsequent professional life of its graduates, and incidentally to prepare its students to be immediately useful in an architect's office. The curriculum has been arranged to meet the æsthetic and scientific needs of the profession, and includes History and Principles of Architecture, Free-hand Drawing in pencil, ink and colour, Modelling, Architectural Design, Analysis and Criticism of Buildings, Mathematics, Statics, Strength and Elasticity of Materials, Theory of Construction and Heating and Ventilation.

The equipment of the department includes a working library of 1,000 volumes, a large file of periodicals, 2,500 photographs, 2,000 stereographic photos, 4,500 lantern slides, and a large collection of models and casts.

7. DEPARTMENT OF ELECTRICAL ENGINEERING.

The course in Electrical Engineering is arranged to provide preliminary training for those who would follow any of the various lines of activity connected with electrical industry.

The first two years of the course are devoted to fundamental scientific principles, and incidentally more or less of their application to engineering problems in mechanical, civil, and electrical work. Many problems are solved in the drafting rooms by graphical methods. The third year includes further theoretical work, more particular attention being given to electrical and mechanical studies in theory, operation, and design. The fourth year is devoted to advanced work in alternating current theory and practice combined with similar study in thermodynamics, hydraulics or electrochemistry.

A large amount of laboratory practice is provided, most of which belongs to the third and fourth years. In this last year most of the time is spent in laboratory investigations and studies resulting therefrom.

Candidates for the degree in this department will be required to present satisfactory evidence of having had at least eight months' mechanical experience in one of the principal trades connected with Electrical Engineering, the object being that graduates may have some practical knowledge of the duties of the workman in this branch of engineering as distinguished from those of the purely technical man. Certificate forms will be furnished on application. These forms contain full details in regard to the work required.

OUTLINE OF COURSES OF INSTRUCTION.

APPLIED MECHANICS.

10. STATICS:—*T. R. Loudon.*
Departments 1, 2, 3, 4, 6 and 7, I Year; 2 hours per week both terms.
This course of lectures deals with forces in a single plane, and concerns chiefly the calculation of tension, compression and shearing stresses in frame structures and solid beams. It also deals with the consideration of problems relating to friction.

11. DYNAMICS:—*J. McGowan.*
Departments 1, 2, 3, 6, 7 and 8, I Year; 2 hours per week; both terms.
This course of lectures deals with bodies having motion of translation in one plane; also with relative motion, momentum, work and energy.
Text book:—Tutorial Dynamics—Briggs and Bryan.

12. DYNAMICS OF ROTATION:—*W. J. Loudon.*
Departments 1, 2, 3, 6, 7 and 8, II Year; 1 hour per week; both terms.
This course covers angular motion, including moments of inertia, simple harmonic motion, the pendulum, centres of mass, suspension and percussion, the simple theory of the fly wheel and the governor.
Text book:—Dynamics of Rotation—Worthington.

13. STRENGTH OF MATERIALS:—*P. Gillespie.*
Departments 1, 2, 3, 4, 6, 7 and 8, II Year; 2 hours per week; both terms.
In this course the strength and elasticity of materials are mathematically treated. The stresses in such elements of structures as the tie rod, the beam, the strut and the member subjected to shear are investigated and the elementary principles of design established. In the lecture and drafting rooms through numerous problems involving the design of simple beams, columns, riveted connections, etc., these principles are exemplified. The work includes also the discussion of eccentric loading, suddenly applied loads and repeated stresses.
Reference Book:—Mechanics of Materials, Merriman.

14. STRENGTH AND ELASTICITY OF MATERIALS:—*J. McGowan.*
Departments 1, 3 and 4, III Year; 1 hour per week; one term.
This course is intended to give the student an introduction to the experimental study of the strength and elasticity of materials. It is intended that he shall acquire some familiarity with the construction and operation of testing machines and with the properties of the ordinary building materials.
Reference Book:—Laboratory Instructions, Department of Applied Mechanics U. of T. 1911.

16. THEORY OF STRUCTURES:—*J. McGowan.*
Departments 1 and 3, IV Year; 2 hours per week; both terms.
The work taken up in this course of lectures consists in swing bridges, arches, suspension bridges and some special features in column construction. Some examples of the above structures will be designed in the class and carried out in further detail in the drafting room.
Reference Book:—Modern Framed Structures—Johnson.

17. STRENGTH AND ELASTICITY OF MATERIALS:—*P. Gillespie,*
Departments 1, 3 and 4, IV Year; a laboratory course of about 11 hours per week.
This course of experiments is intended to give the student practice in investigating the elastic and physical properties of iron, steel, concrete, timber and other building materials.
Reference book:—Materials of Construction—Johnson.

18. THEORY OF STRUCTURES:—*C. R. Young.*
Department 1, III Year; 2 hours per week; both terms.
The work of the first term comprises a thorough discussion of restrained, continuous and trussed beams, multiple beam and box girders, plate girders and certain practical aspects of column design. A number of designs of girders and structural details are worked out in the class and drafting rooms.
The second term is given chiefly to the design of a riveted truss highway span and a riveted truss railway span, the complete designs being made in the lecture and drafting rooms.

19. THEORY OF STRUCTURES:—*C. R. Young.*
Departments 2, 3, 4 and 6, III Year; 2 hours per week; first term.
The work is practically the same as that for Department 1 in the first term except that a building plate girder is designed instead of a plate girder bridge span.
Text books:—Modern Framed Structures—Johnson, Bryan and Turneaure; Theory of Structures—Spofford; Bridge and Structural Design—Thomson; Aids in Structural Design—Young; Carnegie Pocket Companion; Cambria Steel.

20. FOUNDATIONS, RETAINING WALLS AND DAMS:—*P. Gillespie.*
Required in Department 1, IV Year; 1 hour per week; both terms.
This course of lectures is devoted to the design of the structures mentioned. Preparatory to the discussion of the practical aspects of the subjects, and in order to gain familiarity with the fundamental principles involved, a part of the first term is given over to the consideration of the theory of compound stress. The most approved forms of construction of retaining walls, footings, abutments, piers and dams are then described, and typical designs are worked out in the class and drafting rooms.
Text books and books of reference:—Retaining Walls for Earth—M. A. Howe; Walls, Bins and Grain Elevators—M. S. Ketchum; A Treatise on Masonry Construction—I. O. Baker; Design and Construction of Dams—E. Wegmann.

21. CEMENTS AND CONCRETE:—*P. Gillespie.*
Departments 1 and 4, III Year; 1 hour per week; second term.
The manufacture, testing and use of Portland Cement and the elementary theory of reinforced concrete are discussed in this course of lectures.

22. REINFORCED CONCRETE:—*P. Gillespie.*
Departments 1 and 4, IV Year; 1 hour per week.
The theory of the strength of reinforced concrete elements including the beam, the slab, the T-beam and the column, is continued in this course.
The analysis of the monolithic arch by the elastic theory is discussed, and the student is required in the drafting room to apply his knowledge to the design of simple structures.
Reference books:—Principles of Reinforced Concrete Construction—Turneaure and Maurer; Concrete, Plain and Reinforced,—Taylor and Thompson.

23. IRON AND STEEL.—*J. Galbraith, T. R. Loudon.*
Taken by students in Year IV, who select the options (*c*) Structural Engineering and (*e*) Strength and Elasticity of Materials.
Metallography—Mechanical Treatment, Heat Treatment; Metallurgy; Physical Properties; 1 lecture per week. Laboratory, second term.

24. MILL BUILDING DESIGN:—*C. R. Young.*
Departments 1 (*Structural Engineering Option*), 3 and 4 (*Architectural Engineering Option*), IV Year; 1 hour per week; both terms.

The structural problems involved in the design of mill buildings of timber, steel and reinforced concrete are discussed in this course of lectures. Consideration is given to the various types of buildings, the conditions governing their choice and the details of construction in different materials. Designs of portions of mill buildings are worked out in the class and drafting rooms.

Text books:—Mill Buildings—Tyrrell; Steel Mill Buildings—Ketchum.

MACHINERY.

25. THEORY OF MECHANISM:—*M. B. Jackson.*

Departments 3, 7 and 8, II Year; 2 hours per week; both terms.

This course of lectures treats of the motions of machines, the latter being assumed to be of sufficient strength to resist acting forces. The formation of machines is dealt with in a general way and investigations of the velocities of points and links are made. The design of gear teeth and the application of trains of gears are taken up, also problems in static equilibrium.

Problems are worked out in the drafting room in which the methods given are employed.

Text book:—Theory of Machines—Angus.

26. MECHANICS OF MACHINERY:—*M. B. Jackson.*

Departments 3 and 7, III Year; 1 hour per week; both terms.

In this course the questions dealt with are the construction of acceleration diagrams, the determination of the accelerations of various parts of machines, the kinetic energy of machines, the effect of the weights and accelerations of parts on the velocity of the flywheel and the proper weight of the latter to fulfil given conditions. The theory of various forms of governors is also fully taken up and the efficiency of machines. The discussion of the design of slide valves and gears is continued in this course.

Text books:—Slide Valve Gears—Halsey; Theory of Machines—Angus.

27. MACHINE DESIGN:—*J. T. Lagergren.*

Departments 3, 6, 7, III Year; 1 hour per week; both terms.

The lectures in this course deal principally with the applications of the principles of kinematics and the theory of the strength of materials to the design of machine parts, such as shafting, gearing, journals, clutches, etc.

In addition to the lecture course time is spent in the drafting room where designs involving the above principles are worked out and the necessary calculations made. These designs are made as parts of some actual machine, such as an engine.

The laboratory work occupies $7\frac{1}{2}$ hours per week for Department 3, $4\frac{1}{2}$ hours for Department 6 and $3\frac{1}{4}$ hours for Department 7.

28. MACHINE DESIGN:—*J. T. Lagergren.*
Department 3, IV Year; 4 hours per week.
The lectures and practical work in this course are meant to supplement those of Course 27 and deal with more difficult problems and designs. The design of a complete machine is taken up, and detail drawings as well as an assembly drawing are made.

HYDRAULICS.

29. HYDRAULICS—GENERAL COURSE:—*J. J. Traill.*
Departments 1, 3 and 7, III Year; 2 hours per week.
This is an introductory course of lectures in hydraulics, and is devoted to the development and discussion of fundamental formulas relating to the flow of water in pipes, the measurement of discharge by various methods, such as orifices and weirs, the conditions of flow obtaining in open channels, artificial and natural, and in pipes flowing partially full, together with other kindred subjects.
The object of this course is to provide the student with a good working knowledge of the fundamental principle of hydraulics, such as is useful in practical work, and is necessary to the intelligent investigation of more advanced problems, such as the design of turbines, water-wheels and power plants generally.

29*a*. HYDRAULICS:—*J. J. Traill.*
Departments 2 and 8, III Year; Department 6, IV Year.
This course deals with the development and discussion of fundamental formulas relating to the flow of water in pipes, the measurement of water by various methods, the conditions of flow in open channels and in pipes partly full. This work is followed by a brief discussion on pumps and other hydraulic machines. The last-mentioned part of the course is supplemented by experimental work under the general title "Power".

30. HYDRAULIC LABORATORY:—*J. J. Traill.*
Department 1, III Year; 3 hours per week; one term. Departments 3 and 7, III Year; 3 periods of 3 hours each; first term. Department 6, IV Year; 3 hours per week; second term.
The work in this course is intended to illustrate the lecture course given in Hydraulics and to give the student some working acquaintance with the formulas met with in practice. Experiments are made to determine the coefficients for an orifice and the coefficients of discharge for a weir. The results of these experiments are used in measuring the discharge in subsequent experiments on meters and for the determination of hydraulic resistances in various cases of flow in pipes.

31. HYDRAULICS:—*R. W. Angus, J. J. Traill.*
Departments 1, 3 and 7, IV Year; 3 hours per week; both terms.
Following up the third year course in this subject the theory already acquired is applied to the solution of problems connected with branched pipes, water-mains discharging at various points along their length, the effect of a dam on the water level at any point on a stream and numerous other problems.
The most important question considered and to which most of the lectures are devoted is the theory of turbines and centrifugal pumps, the effect of the design on the speed, discharge, power and efficiency being fully taken up.
Text books:—Hydraulic Motors, etc.—Bodmer; Centrifugal Pumps—Loewenstein and Crissey; Hydraulics—Merriman; Water-Power Engineering—Mead.

32. HYDRAULICS:—*R. W. Angus, J. J. Traill.*
Departments 1, 3 and 7, IV Year; about 9 hours per week.
A laboratory course devoted to experimental work on turbines of various types and centrifugal and turbine pumps and other similar devices. This experimental work is arranged to illustrate the lectures on turbine and pump design. The experiments are made on two large turbine pumps used in the laboratory supply, as well as on apparatus specially designed for instruction.
Various methods of measuring water-power and the efficiency of machines are also given.

32a. POWER:—*J. J. Traill.*
Departments 2, 6 and 8, IV Year; 20 hours.
A laboratory course of experiments on pumps, turbines, weirs, orifices, etc.

32b. HYDRAULICS.—*J. J. Traill.*
Department 1, IV Year.
This is a lecture and laboratory course of six hours per week, first term, dealing with the flow of water in pipes and open channels, measurement of water, and pumps and pumping.

HEAT ENGINES.

33. THERMODYNAMICS:—*R. W. Angus.*
Departments 3, 6 and 7, III Year; about 2 hours per week.
A lecture course in which the subject is treated in such a way as to make it of practical value and give a working acquaintance with the principles on which it is based. After the elementary ideas have been given and the proofs of the properties of Carnot's cycle, applications of the subject are made to the perfect gas and to saturated steam and to the various types of engines. Temperatures are taken from the air thermometer.

34. THERMODYNAMICS:—*R. W. Angus.*
Departments 1, 2 and 8, IV Year; 1 hour per week; both terms.
This course is especially designed to give the student a working knowledge of thermodynamics as applied to the perfect gas so that he will be able to understand clearly the action of air compressors, etc. After deducing general principles, the efficiency of compressed air transmission and the relative merits of different types of compressors are discussed.

35. THERMODYNAMIC AND MECHANICAL LABORATORY:—*L. M. Arkley.*
Department 3, III Year; 2 hours per week, first term; 3 hours per week, second term. Department 7, III Year; 2 hours per week, first term; 1½ hours per week, second term. Department 6; 3 hours per week, second term. Department 1, IV Year; 1 hour per week, both terms.
This laboratory course is designed to assist in a clearer understanding of thermodynamics, machine design and mechanics of machinery. The work in thermodynamics consists in the setting of slide valves, indicating engines measuring the brake horse-power, simple engine and boiler tests and the testing of gas and gasoline engines under various conditions. The mechanical laboratory work deals with the efficiency of belts and ropes as well as of several machines of simple construction. An examination of lubricating oils is also made by means of oil testing machines and other well-known devices. Experiments are also made on the balancing of reciprocating and rotating masses.

36. THERMODYNAMICS:—*L. M. Arkley, M. B. Jackson.*
Departments 3 and 7, IV Year; 3 hours per week; both terms.
This is a continuation of the introductory course, the subject being here treated from a general standpoint and the idea of entropy and of the absolute scale of temperatures being introduced. The course includes the treatment of saturated and superheated vapours, gases, the flow of fluids, chimney and boiler efficiency and the theory of various engines and other appliances including air compressors, refrigerating machines, injectors and the various forms of link motions and radial valve gears.
Text books:—Thermodynamics—Peabody; Steam Tables—Peabody.

37. THERMODYNAMICS:—*R. W. Angus, L. M. Arkley, M. B. Jackson.*
Departments 3 and 7, IV Year; about 10 hours per week.
The work in this year is a continuation and extension of the work covered in the third year laboratory course. Careful tests are made of engines of various types, such as simple, tandem, and

cross-compound steam engines; steam turbines; refrigerating machines; air engines; injectors and steam pumps, etc.; and an application is made of Hirn's Analysis and the entropy diagram to the results obtained. A complete set of experiments is made on each machine and the result plotted so as to show clearly to the student the effect of various alterations in the adjustment of the engine on the resulting efficiency.

Several modern gas and gasoline engines and a gas producer give ample opportunity for the study of this type of engine, and facilities are provided for sampling the gas supply and exhaust.

Two experimental stacks and three boilers enable results to be obtained on boiler efficiency and chimney draft.

38. STEAM ENGINES:—*L. M. Arkley.*

Departments 3, 7, and 8, II Year; one hour per week; one term.

This course of lectures includes a discussion of the principles of action of the steam engine; also the theory and design of various simple forms of valve gears used in the operation of such engines.

39. HEAT ENGINES:—*L. M. Arkley.*

Departments 3 and 7, III Year; Department 8, IV Year; one hour per week, both terms.

This course in heat engines is intended for students in Mechanical, Electrical and Metallurgical Engineering, to be supplementary to the general course of lectures in thermodynamics.

The principal commercial forms of heat engines are dealt with in a more or less descriptive manner; special attention is given to considerations affecting the design of the ordinary forms of steam engines, gas engines and oil engines.

39a. POWER:—*L. M. Arkley.*

Departments 1, 2, 6 and 8, IV Year; 20 hours.

A course of experiments with steam and gas engines, compressed air, etc.

ARCHITECTURE.

40. HISTORY OF ARCHITECTURE:—*A. Wellesley McConnell.*

Department 4, I Year; one hour per week; both terms.

In this course the development of architecture is treated very briefly and in an elementary manner, from the Pyramids of Egypt to the present, laying special emphasis on the Egyptian, Grecian and Western Asiatic work. The antique Greek and Roman orders are

studied, and the students are required to make rendered drawings in the studio of certain orders and elements. An attempt is made to develop the student's sense of proportion, and in the latter part of the second term he is required to study a simple problem in design.

41. HISTORY OF ARCHITECTURE:—*A. Wellesley McConnell.*
Department 4, II Year; one hour per week; both terms.
The Classical, Early Christian, Byzantine and Romanesque styles of architecture are studied with the aid of the lantern. The student is required to become acquainted with the best examples in these styles in order that his sense of proportion and his taste may be developed and his knowledge of the different elements extended.

42. HISTORY OF ARCHITECTURE:—*A. Wellesley McConnell.*
Department 4, III Year; one hour per week; both terms.
In this course the work of the previous year is continued, with the study of Gothic and the Renaissance.

43. HISTORY OF ORNAMENT:—*A. Wellesley McConnell.*
Department 4, II Year; one hour per week; both terms.
In this course the development of Ornament is traced from the beginning through Egyptian, Assyrian, Grecian, Roman, Byzantine, Romanesque and Moresque styles. An attempt is made to analyze ornament of the best periods and to systematize the principles followed in form and colour. The development and types of mouldings are also studied.

44. HISTORY OF ORNAMENT:—*A. Wellesley McConnell.*
Department 4, III Year; one hour per week; both terms.
A continuation of the course in Ornament given to the Second Year. Instruction is given in lectures with the aid of the stereopticon. The students are required to become familiar with the characteristics and forms of the ornament used in the Gothic and Renaissance styles.

45. ORDERS OF ARCHITECTURE:—*A. Wellesley McConnell.*
Department 4, II Year; one hour per week; both terms.
Lectures on the Five Orders of Architecture, their affiliated forms and the other elements used in design. Simple problems in elementary design involving the use of the orders and other elements are set from time to time.

46. ARCHITECTURAL DESIGN:—*A. Wellesley McConnell.*
Department 4, II Year; one hour per week; both terms.

This course is given by means of individual instruction in the class room by criticisms of the solutions of different problems set during the year and by a series of lectures. It is in this course that the student begins the serious study of design; continued practice in architectural drawing and rendering affords the training necessary to make the student a proficient draughtsman.

47. ARCHITECTURAL DESIGN:—*A. Wellesley McConnell.*
Department 4, III Year.
Theory and practice of Design.
This course is given by individual instruction in the studio and by lectures. The greater part of the course is devoted to problems in design, and forms a continuation of the course given in the preceding year.

48. ARCHITECTURAL DESIGN:—*A. Wellesley McConnell.*
Department 4, IV Year.
The entire course is devoted to advanced academic training in designing the more monumental classes of buildings. The student is required to design and submit sketches and working drawings of some subject to be selected by himself.

48A. ARCHITECTURAL DESIGN:—*A. Wellesley McConnell.*
Department 4, IV Year; Architectural Engineering Option.
A short course of lectures and studio work referring especially to the artistic side of the design of commercial buildings.

49. FREEHAND DRAWING AND WATER COLOR PAINTING:—*C. W. Jefferys.*
Department 4, I Year; 2 hours per week; both terms.
Drawing from still life objects. Primary freehand perspective. Primary pencil and pen and ink rendering.

49A. Department 4, II Year; 2 hours per week; both terms.
Drawing and monochrome painting from still life.
Drawing from the cast.
Pencil, pen and ink, and monochrome rendering.
Primary water color.
Drawing from landscape and natural objects.

49B. Department 4, III Year; 2 hours per week; both terms.
Drawing from the cast.
Water color from still life. Water color rendering.
Drawing from landscape and natural objects.
Students who are sufficiently advanced are admitted to the Fourth Year Life Drawing Class.

49c. Department 4, IV Year; 2 hours per week; both terms.
Water color from still life and from landscape.
Drawing from life.
Water color rendering.

50. MODELLING:—*J. L. Banks.*
Department 4; I Year; 2 hours per week; both terms.
The Orders. Synopsis of styles.

50a. Department 4; II Year; 2 hours per week; both terms.
The styles elaborated.
Problems in figures and in relation to architecture.

50b. Department 4; III Year; 2 hours per week; both terms.
Styles continued.
Problems, combination of figure, ornament, and architecture, and then relative values.

50c. Department 4; IV Year; 2 hours per week; both terms.
Modelling from life.
Anatomy.
Composition of groups.

51. STRUCTURAL DESIGN:—*C. R. Young.*
Departments 1 (*Structural Engineering Option*) and 4 (*Architectural Engineering Option*), IV Year; 1 hour per week first term, and 2 hours per week second term.
One lecture per week for both terms is devoted to the ordinary problems connected with the structural design of buildings of timber, steel and reinforced concrete. In the second term one additional lecture per week is devoted to higher structural problems arising in building work and to a consideration of the structural design of elevated tanks, standpipes and towers. In both terms typical structures, or portions of them, are designed in the class and drafting rooms.

51a. STRUCTURAL DESIGN:—*C. R. Young.*
Department 4, IV Year; 1 hour per week; both terms.
This course is contained in that given to students taking the Structural Engineering and the Architectural Engineering Options. Those taking the regular architectural course in the fourth year are required to attend all of the lectures in this subject in the first term, but only *one* lecture per week in the second term.
Text books:—Architectural Engineering—Freitag; Steel Construction—Tucker; Structural Details—Jacoby; Architects' and Builders' Pocket-Book—Kidder.

52. BUILDING MEASUREMENT:—*C. H. C. Wright.*
Department 4, I Year; 1 hour per week; both terms.
In this course of lectures the principles of measurements and mensuration with special reference to buildings will be discussed. With this is combined 4½ hours per week practice in measurements of existing buildings, quantities, etc.

53. BUILDING MATERIALS:—*C. H. C. Wright.*
Department 4, III Year; 2 hours per week; both terms.
The structural and aesthetic value of the various building materials.

54. SANITARY SCIENCE:—*C. H. C. Wright.*
Department 4, IV Year; 1 hour per week; both terms.
Modern plumbing, its design and installation.

54A. HEATING AND VENTILATION:—*C. H. C. Wright.*
Department 4, IV Year; 1 hour per week; both terms.
The design of different systems, where they should be used, heating specifications, etc.

ASTRONOMY AND GEODESY.

55. ASTRONOMY, ELEMENTARY:—*C. A. Chant.*
Department 1, II Year; 1 hour per week; both terms.
A course in descriptive Astronomy, explaining the ordinary astronomical terms, and describing the various celestial bodies and their motions. In the evenings opportunity will be given for identifying the stars and for observing with telescopes.
Text book:—New Astronomy:—*D. P. Todd.*

56. ASTRONOMY AND GEODESY:—*L. B. Stewart.*
Department 1, III Year; 2 hours per week.
The course of lectures deals with the determination of time, latitude, longitude and azimuth, by methods adapted to the use of the surveyor's transit and the sextant. It is designed to fulfil the requirements of the final examinations for Ontario and Dominion Land Surveyors.
In Geodesy an account is given of the principles and methods of a secondary triangulation survey, also of the principles involved in the North-West system of survey.
Text book:—Practical Astronomy as applied to Geodesy and Navigation—Doolittle; Nautical Almanac, 1914.

57. FIELD WORK:—*L. B. Stewart, S. R. Crerar.*
Department 1, III Year; about 1 hour per week; first term.
The practical work in this subject comprises observations in the field with the transit and sextant for the determination of time, latitude and azimuth by the methods described in the lectures.

58. ASTRONOMY (Advanced):—*L. B. Stewart.*
Department 1, IV Year; 2 hours per week.
The lecture course in this subject comprises the theory and adjustment of the instruments used in connection with a geodetic survey; the methods of taking and reducing observations for time, longitude, latitude, and azimuth, with the precision required on such a survey; and other matters relating to these subjects.

59. GEODESY AND METROLOGY:—*L. B. Stewart.*
Department 1, IV Year; 2 hours per week.
The lecture course includes a description of the methods of measuring base lines and the angles of a triangulation; the geometry of the spheroid with applications to geodetic problems; the computation of geodetic positions; the solution of large triangles on the earth's surface, and the adjustment of a triangulation; trigonometric and precise spirit levelling; the determination of the figure of the earth by arc measurements, and by the pendulum; the theory of map projections, etc.

60. ASTRONOMY, GEODESY AND METROLOGY:—*L. B. Stewart.*
Department 1, IV Year; about 23 hours per week.
The practical work in the above subjects includes the observation of meridian transits for time and longitude determinations, and of prime vertical transits for latitude, with the astronomical transit instrument; the observation of meridian zenith distances of stars, and of azimuths at elongation for latitude, with the alt-azimuth; theodolite observations for azimuth; observations for latitude with the zenith telescope; the investigation of the constants of the instruments used, and the reduction of all observations; the measurement of a base line with the steel tape and with wires, and the determination of the constants of the tape; the measurement of the angles of a triangulation and the adjustment of the angles of a network of triangles, etc.

BIOLOGY.

61. ELEMENTARY BIOLOGY:—*B. A. Bensley.*
Department 5, I Year; optional in Department 1, III Year; 2 hours per week; both terms.
A course of two lectures a week throughout the session is designed as an introduction to the whole range of biological studies. After a sketch of the scope and objects of these, the lectures will treat (*a*) of the fundamental principles of biology, as illustrated by the simplest animals and plants; (*b*) of typical forms of higher plants in ascending order; (*c*) of typical forms of animals in a similar way; and (*d*) of the structure and functions of the human body.

Students are recommended to make use of the Biological Museum in connection with this course of lectures. For reference: Jeffrey Parker, Elementary Biology; Ramsay Wright, High School Zoology; Atkinson, Elementary Botany; Huxley, Lessons in Elementary Physiology.

62. ELEMENTARY BIOLOGY:—*A. G. Huntsman and J. H. Faull.*
Department 5, I Year; 3 hours per week; both terms.
An elementary course of laboratory work on the general structure and identification of plants and animals, and the use of the microscope in the examination of tissues and products.

63. ADVANCED BIOLOGY:—*J. H. Faull.*
Department 5, II Year.
A course of instruction in the Morphology and Physiology of Bacteria, Moulds and Yeast Fungi.

63a. ADVANCED BIOLOGY:—*J. H. Faull, E. M. Walker.*
Department 1, IV Year.
(*a*) *Botany*:—An elementary lecture and laboratory course of about 3 hours per week; second term, on the economic algæ and fungi.
(*b*) *Zoology*:—Lecture and laboratory course of 4 hours per week; second term, in the morphology, ecology and classification of aquatic animals.

64. BACTERIOLOGY:—*J. A. Amyot.*
Departments 1, 5 and 6, IV Year; a lecture and laboratory course of 8 hours per week; second term, on elementary bacteriology.

BUSINESS.

65. ACCOUNTING:—*W. S. Ferguson.*
All Departments, I Year; 1 hour per week; both terms.
The principles of accounting; illustrated by typical accounts.

66. BANKING AND FINANCE:—*M. A. Mackenzie.*
All Departments, II Year; 1 hour per week; both terms.
Money and the instruments of credit; bond issues, loans, sinking funds, etc.

67. LIMITED COMPANIES:—*J. M. Langstaff.*
All Departments, III Year; 1 hour per week; both terms.
Partnerships; the history and development of the limited liability company; the Companies Acts; Company finance.

68. CONTRACTS AND SPECIFICATIONS:—*C. R. Young.*
Departments 1 and 4, IV Year; 1 hour per week; second term.

This course of lectures deals with the fundamental principles of contract and specification writing. The critical examination of typical specifications and agreements by the class forms an essential feature of the instruction.

Text books:—Engineering Contracts and Specifications—Johnson: Contracts in Engineering—Tucker; Specifications and Contracts —Wadell-Wait.

69. COST-KEEPING, ETC.:— *J. W. Bain, L. M. Arkley.*
Departments 2, 3, 5, 6 and 7, IV Year.
Works management, mechanical specifications, analysis of costs, reports.

CHEMISTRY.

75. ELEMENTARY CHEMISTRY:—*J. W. Bain.*
All Departments, I Year; 2 hours per week; both terms.
A lecture course in elementary chemistry dealing with the metals and non-metals, with experimental illustrations.

76. ELEMENTARY CHEMISTRY:—*M. C. Boswell.*
Departments 2 and 6, I Year; 3 hours per week; second term.
A laboratory course to illustrate the use of the sensitive balance, to verify some of the laws which form the basis of the science, and to serve as an introduction to quantitative laboratory methods. Instruction given as required before each period.

77. INORGANIC CHEMISTRY:—*W. H. Ellis.*
Departments 5 and 6, I Year; 1 hour per week; both terms.
A lecture course on the elements and important inorganic compounds, supplementing Course 75.
Text book:—Introduction to General Inorganic Chemistry—Alex. Smith.

78. INORGANIC CHEMISTRY:—*L. J. Rogers.*
Departments 5 and 8, I Year; about 17 hours per week; both terms.
A laboratory course of quantitative experiments illustrating the use of the sensitive balance, and confirming the fundamental laws of chemistry; qualitative inorganic analysis; quantitative analysis of pure salts; inorganic preparations; molar weight determinations.
Text book:—Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

79. INORGANIC CHEMISTRY:—*J. W. Bain.*
Departments 2, 5 and 6, II Year; 1 hour per week; first term.
A lecture course on the chemistry of the metals; a continuation of Course 75.

80. ANALYTICAL CHEMISTRY:—*E. G. R. Ardagh.*
Department 5, II Year; Departments 2 and 6, III Year; 1 hour per week; both terms.
A lecture course on the principles of chemical analysis; select gravimetric and volumetric methods; technical analysis.

81. ANALYTICAL CHEMISTRY:—*E. G. R. Ardagh.*
Departments 1, 2, 3 and 7, II Year; 6 hours per week; one term.
Laboratory practice in elementary qualitative and quantitative analysis.
Text book:—A Smaller Chemical Analysis—Newth.

82. ANALYTICAL CHEMISTRY:—*J. W. Bain.*
Department 2, II Year; 3 hours per week; both terms.
A laboratory course in the gravimetric determination of metals and acids, with elementary volumetric analysis.
Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

83. ANALYTICAL CHEMISTRY:—*L. J. Rogers.*
Department 5, II Year; 14 hours per week; 17 weeks.
A laboratory course comprising gravimetric and volumetric methods, acidimetry and alkalimetry.
Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

84. ANALYTICAL CHEMISTRY:—*E. G. R. Ardagh.*
Department 6, II Year; 6 hours per week; both terms.
A laboratory course in qualitative and elementary quantitative chemical analysis; inorganic preparations.
Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

85. ENGINEERING CHEMISTRY:—*W. H. Ellis.*
Departments 1, 2, 3, 5, 6 and 7, II Year; 1 hour per week; second term.
A lecture course consisting of a study of the industrial production and application of heat and light, and of the chemistry of fuel and the products of combustion.

86. INDUSTRIAL CHEMISTRY:—*W. H. Ellis.*
Departments 5 and 6, II Year; 1 hour per week; both terms.
A lecture course on the manufacture of salts, acids, alkalies and inorganic chemicals.
Text book:—Inorganic Chemistry—Thorp.

87. ORGANIC CHEMISTRY:—*M. C. Boswell.*
Departments 1, 2, 3 and 7, II Year; 1 hour per week; first term.
A lecture course in elementary organic chemistry.
Text book:—Theoretical Organic Chemistry—Cohen.

88. ORGANIC CHEMISTRY:—*M. C. Boswell.*
Departments 5 and 6, II Year; 2 hours per week; both terms.
A lecture course dealing with the aliphatic compounds.
Text book:—Theoretical Organic Chemistry—Cohen.

89. ORGANIC CHEMISTRY:—*M. C. Boswell.*
Department 5, II Year; 14 hours per week; 7 weeks.
A laboratory course in organic preparations in the aliphatic series.

90. PHYSICAL CHEMISTRY:—*W. L. Miller.*
Departments 5, 6 and 8, II Year; 2 hours per week; both terms.
A course of lectures on the elements of chemical mechanics, and the theory of solutions.

91. ANALYTICAL CHEMISTRY:—*E. G. R. Ardagh.*
Department 5, III Year; 19 hours per week; 16 weeks.
A laboratory course on the technical analysis of iron and steel alloys, ores, furnace products, ceramic materials, foods, gases, fuels, etc.

92. ANALYTICAL CHEMISTRY:—*E. G. R. Ardagh.*
Department 6, III Year; 11 hours per week, first term; 13 hours per week, second term.
A laboratory course in volumetric and technical analysis.

93. ANALYTICAL CHEMISTRY:—*L. J. Rogers.*
Departments 2 and 8, III Year; 5 hours per week; both terms.
A laboratory course on the technical analysis of ores and furnace products.

94. ENGINEERING CHEMISTRY:—*W. H. Ellis.*
Departments 1, 2, 3, 5, 6 and 7, III Year; Department 4, II Year; 1 hour per week; both terms.
A lecture course on the application of chemistry to engineering problems; air, water, sewage, the materials of construction, explosives, etc.

95. INDUSTRIAL CHEMISTRY:—*W. H. Ellis.*
Departments 5 and 6, III Year; 1 hour per week; both terms.
A lecture course on petroleum and its products, coal tar and its products, the destructive distillation of wood; fats, oils, soap, sugar, starch, and gums; fermentation industries, etc.
Text book:—Industrial Chemistry—Thorp.

96. CHEMICAL PLANT:—*J. W. Bain.*
Departments 5 and 6, III Year; 1 hour per week; both terms.
A lecture course on the machinery and plant used in chemical manufacturing.

97. ORGANIC CHEMISTRY: (A)—*M. C. Boswell.*
Departments 5 and 6, III Year; 2 hours per week; both terms.
A lecture course on the aromatic series.
Text book:—Theoretical Organic Chemistry—Cohen.

98. ORGANIC CHEMISTRY (B):—*F. B. Allan.*
Departments 5 and 6, III Year; 1 hour per week; second term.
A lecture course on stereoisomerism, desmotropism, etc.

99. ORGANIC CHEMISTRY:—*M. C. Boswell.*
Department 5, III Year; 19 hours per week; 8 weeks.
A laboratory course in organic preparations in the aromatic series; organic analysis.

100. ORGANIC CHEMISTRY:—*M. C. Boswell.*
Department 6, III Year; 17 hours per week; 4 weeks.
A laboratory course in organic preparations.

101. ELECTROCHEMISTRY:—*W. L. Miller.*
Departments 5, 6, 7 and 8, III Year; 2 hours per week; first term.
A lecture course on elementary electrochemistry, illustrated by experiments.

102. ELECTROCHEMISTRY:—*W. L. Miller.*
Departments 5, 6, 7 and 8, III Year; 3 hours per week; first term.
A laboratory course in quantitative measurements to accompany Course 101.

103. INORGANIC CHEMISTRY:—*J. W. Bain.*
Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on chemical theory.

104. ORGANIC CHEMISTRY:—*M. C. Boswell.*
Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on advanced organic chemistry.

105. ORGANIC CHEMISTRY:—*M. C. Boswell.*
Departments 5 and 6, IV Year.
A laboratory course in advanced organic chemistry.

106. INDUSTRIAL CHEMISTRY:—*W. H. Ellis, J. W. Bain.*
Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on selected subjects in chemical technology.

107. INDUSTRIAL CHEMISTRY:—*W. H. Ellis, J. W. Bain.*
Departments 5 and 6, IV Year; about 28 hours per week; both terms.
A laboratory course in industrial problems.

108. ELECTROCHEMISTRY:—*W. L. Miller.*
Departments 5, 6 and 7, IV Year; 2 hours per week; both terms.
An advanced lecture course on the theory of solutions and electrolysis, and the application to the practice of electro-deposition and electrolytic refining of metals. The course also includes lectures on the electric furnace with special consideration of efficiency.
Text books:—Electrometallurgy—Borchers; Electrochemistry—Le Blanc; Electrochemistry—Luepke.

109. ELECTROCHEMISTRY:—*W. L. Miller.*
Departments 5, 6 and 7, IV Year; about 28 hours per week.
A laboratory course accompanying Course 108.

110. SANITARY AND FORENSIC CHEMISTRY:—*W. H. Ellis.*
Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on the composition and examination of air, water and food; poisons and their detection.

111. SANITARY AND FORENSIC CHEMISTRY:—*W. H. Ellis.*
Departments 5 and 6, IV Year.
A laboratory course accompanying Course 110.

112. ANALYTICAL CHEMISTRY:—*E. G. R. Ardagh.*
Department 2, IV Year, 12 hours per week; first term.
A laboratory course comprising analysis of ores and furnace products.

113. SANITARY CHEMISTRY:—*H. M. Lancaster, E. G. R. Ardagh.*
Department 1, IV Year.
A lecture and laboratory course of about 16 hours per week for one term on water supply and sewage disposal.

DESCRIPTIVE GEOMETRY AND DRAWING.

115. DESCRIPTIVE GEOMETRY:—*J. R. Cockburn.*
Departments 1, 2, 3, 6 and 7, I Year; 1 hour per week; both terms.
This course of lectures deals chiefly with the principles of orthographic and oblique projections and the application of such principles to the solutions of problems relating to straight lines and planes.

116. DESCRIPTIVE GEOMETRY:—*J. R. Cockburn.*
Department 4, I Year; 1 hour per week; both terms.
This course of lectures deals chiefly with the principles of orthographic and oblique projections and the application of such principles to the solution of problems relating to straight lines and planes, special reference being made to the determination of shades and shadows.

117. DRAWING:—*J. R. Cockburn.*
Departments 1 and 2, I Year; about 16 hours per week.
Copying from the flat, lettering, topography; graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; the plotting of original surveys; measured drawings.

118. DRAWING:—*J. R. Cockburn, A. Wellesley McConnell.*
Department 4, I Year; about 15 hours per week.
Copying from the flat, lettering, topography, freehand drawing in black and white, both from copies and models; the graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; measured drawings. Elements and principles of Architecture.

119. DRAWING:—*J. R. Cockburn.*
Department 5, I Year; about 9 hours per week.
Copying from the flat, lettering, measured drawings.

120. DRAWING:—*J. R. Cockburn.*
Departments 3, 6 and 7, I Year; about 20 hours per week.
Copying from the flat, lettering, topography; graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; measured drawings.

121. DESCRIPTIVE GEOMETRY:—*J. R. Cockburn.*
Departments 1, 2, 3, 6 and 7, II Year; 1 hour per week; both terms.
This course of lectures is a continuation of the work taken in the first year with the following additions: Problems relating to curved surfaces, principles of shades, shadows and perspective.

122. DESCRIPTIVE GEOMETRY:—*J. R. Cockburn.*
Department 4, II Year; 1 hour per week; both terms.
This course of lectures is a continuation of the work taken in the First Year with the addition of problems relating to curved surfaces, shades, shadows and perspective.

123. DRAWING:—*J. R. Cockburn.*

Departments 1 and 2, II Year. Department 1, about 14 hours per week. Department 2, about 7 hours per week; both terms.

Colouring and shading as applied to both topographical and construction drawings; problems in descriptive geometry relating to solids bounded by curved surfaces; principles of shades, shadows and perspective; solution of problems in optics and strength of materials; measured drawings; elementary design.

124. DRAWING:—*J. R. Cockburn.*

Departments 3 and 7, II Year; about 15 hours per week; both terms.

Colouring and shading as applied to construction drawings; problems in descriptive geometry relating to solids bounded by curved surfaces; principles of shades, shadows and perspective; solution of problems in optics, theory of mechanism and strength of materials; measured drawings; elementary design.

125. DRAWING:—*J. R. Cockburn, A. Wellesley McConnell.*

Department 4, II Year; about 18 hours per week; both terms.

Freehand drawing including monochrome and colours; exercises from the orders of architecture; principles of shades, shadows and perspective; elementary architectural design; problems in descriptive geometry relating to solids bound by curved surfaces; solution of problems in optics and strength of materials; measured drawings.

126. DRAWING:—*J. R. Cockburn.*

Department 6, II Year.

Same as Department 3, with exception that theory of mechanism is not included.

127. DESCRIPTIVE GEOMETRY:—*J. R. Cockburn.*

Department 1, III Year; 1 hour per week; one term.

This course of lectures deals with spherical projections, the principles of mapmaking, and the graphical solution of spherical triangles.

128. DRAWING:—*J. R. Cockburn, C. R. Young.*

Department 1, III Year; about 12 hours per week.

Principles of mapmaking, spherical projection, plotting of original surveys relating to topographical and railway work; problems in theory of construction; original design of various structures; measured drawings.

129. DRAWING:—*J. R. Cockburn.*

Department 2, III Year; $4\frac{1}{2}$ hours per week.

Plotting of original surveys, relating to topographical and railway work and mining; problems in theory of construction; original design; measured drawings.

130. DRAWING:—*J. R. Cockburn, A. Wellesley McConnell, C. R. Young.*
Department 4, III Year; about 16 hours per week, first term; 22 hours per week, second term.
Advanced work in monochrome and colours; problems in shades, shadows and perspective; architectural design; problems in theory of construction, including framed structures.

131. DESCRIPTIVE GEOMETRY:—*J. R. Cockburn.*
Department 4, III Year; 1 hour per week; first term.
Advanced work in shades, shadows and perspective.

132. DRAWING:—*J. R. Cockburn, C. R. Young.*
Departments 2, 3 and 6, III Year; 3 hours per week; both terms.
Problems in design dealing with the theory of structures.

ELECTRICITY.

135. MAGNETISM AND ELECTRICITY:—*H. W. Price.*
Departments 3, 5, 6 and 7, I Year; 2 hours per week; first term.
A course of lectures on general principles relating to magnetism, electricity, electromagnetism, electrostatics, etc., illustrated largely from engineering apparatus.
Text book:—Elementary Electricity and Magnetism—S. P. Thompson.

136. ELECTRIC CIRCUITS:—*W. S. Guest.*
Departments 3, 5, 6 and 7, I Year; 2 hours per week; second term.
This course of lectures concerns chiefly fundamental principles relating to electric circuits, and leads to consideration of such problems as the distribution of electric energy through lines and networks and the division of load between generators.
Text book:—Electrical Problems—Hooper and Wells.

137. ELECTRICITY:—*W. S. Guest.*
Departments 3, 5, 6 and 7, I Year; 3 hours, alternate weeks; both terms.
A laboratory course of experiments, given in logical order, designed to demonstrate fundamental principles in connection with the generation and flow of currents in electric circuits. The work is associated with the lecture courses, magnetism and electricity, and electric circuits (135, 136).

138. ELECTRICITY:—*T. R. Rosebrugh.*
Departments 3, 5, 6 and 7, II Year; 2 hours per week; both terms.

Deals with the theory of electrical measurements, and detailed study of various methods applicable under different conditions in engineering practice to the measurement of resistance, current, potential difference, power and energy; calibration of commercial measuring instruments. The effect of choice of conditions of measurement on the accuracy of the result is considered.

Text book:—Electrical Measurements—Carhart and Patterson.

139. ELECTRICAL LABORATORY:—*W. S. Guest.*

Departments 3, 5, 6 and 7, II Year; 2½ hours per week; both terms.

This laboratory course is closely associated with the lecture course 138 on electricity for the second year. The more important and useful methods of testing generators and circuits for electromotive force, resistance, current, grounds, etc., are practised, often under conditions such as occur in practice. The work also includes methods of calibration of measuring instruments for voltage, current, power and energy, and certain studies of properties of incandescent lamps.

140. ELECTRICITY:—*H. W. Price.*

Department 2, III Year; Departments 1 and 4, IV Year; 1 hour per week.

A course designed to fit the requirements of non-electrical students. A study of essential principles is followed by discussion of electrical apparatus plants, power transmission, railways, etc.

Text book:—Elementary Electricity and Magnetism—Jackson.

141. POWER:—*H. W. Price.*

Departments 2, 6 and 8, IV Year; 20 hours.

Under the name "Power" a number of operating experiments are arranged to afford some familiarity with measuring instruments and direct and alternating current machinery.

142. MAGNETISM AND ELECTRICITY:—*T. R. Rosebrugh.*

Departments 3 and 7, III Year; 2 hours per week; both terms.

A course of lectures on theory of magnetism and magnetic circuits, theory of direct current generators, motors, etc.

Text book:—Elements of Electrical Engineering, Vol. I—Franklin and Esty.

143. ALTERNATING CURRENT:—*T. R. Rosebrugh.*

Departments 3 and 7, III Year; 1 hour per week.

A first course of lectures on alternating current, covering principles of measurement and leading to the analytical and graphical treatment of the simpler problems relative to alternating current circuits and machinery.

Textbook:—Elements of Electrical Engineering, Vol. II—Franklin and Esty.

144. ELECTRICAL LABORATORY:—*T. R. Rosebrugh, H. W. Price.*
Departments 3 and 7, III Year; 6 hours per week.
This laboratory course is intended to afford the student an opportunity to become familiar with principles involved in continuous current shunt, series and compound wound generators and motors, and, to some extent, alternating current circuits and machinery. Other sections of the work deal with the magnetic properties of iron and steel, and study of iron losses in transformers and generators.
The course is arranged to stand in close relation to the lecture courses in the subjects of magnetism and electricity and alternating current (142, 143) for III Year, and to certain design work (145).

145. ELECTRICAL DESIGN:—*H. W. Price.*
Department 7, III Year; 1 hour per week.
A course of lectures dealing with design of electric machinery and plants, accompanied by designs to be worked out in the design room.
References:—Dynamo-electric Machinery—S. P. Thompson; Electric Machine Design—Parshall and Hobart.

146. ELECTRICAL DESIGN:—*H. W. Price.*
Department 7, III Year.
A design room is set apart for working out designs of electrical apparatus such as transformers, generators, motors, auxiliary apparatus, etc.
Special forms and notes are employed, arranged to suit the various studies. Certain models are provided to assist where necessary.

147. APPLIED ELECTRICITY:—*T. R. Rosebrugh.*
Department 7, IV Year.
This course deals by analytical and vector methods with the theory of alternating current circuits and machinery. Applications of theory are considered with regard to transformers, single and polyphase generators, synchronous motors and rotary converters, induction and commutating series motors, transmission lines, wave analysis, etc.

148. ELECTRICAL LABORATORY:—*T. R. Rosebrugh, H. W. Price, R. H. Hopkins.*
Department 7, IV Year, in connection with 147.

This laboratory course involves a thorough study of principles and properties of single and polyphase circuits and apparatus. Both vector and analytical methods are applied to the solution of problems based on tests made on laboratory machines.

The work deals mainly with constant voltage and constant current transformers, single and polyphase alternators, synchronous motors, rotary converters, induction and single phase commutating motors, transmission line, etc. The work does not consist only of factory tests, but is designed to lead the student to apply theory to practice as illustrated in the apparatus under test, with a view to an exact understanding of methods and an appreciation of limitations under many conditions. Free use is made of the oscillograph as a necessary device for "seeing" conditions under investigation. The best commercial measuring instruments are available.

GEOLOGY.

150. GEOLOGY (Elementary):—*A. P. Coleman.*

Departments 2 and 5, II Year; Department 1, III Year; 1 hour per week; both terms.

This course deals chiefly with historical geology with special reference to Canadian formations.

Reference books:—Introduction to Geology—Scott; Text Book of Geology—Dana.

151. ECONOMIC GEOLOGY. (Including Dynamical and Structural Geology):—*A. P. Coleman.*

Department 2, III Year; 2 hours per week; both terms. Department 1, IV Year.

A study of the more important economic rocks, minerals and ores with their geological associations. Special attention paid to Canadian deposits.

152. ADVANCED GEOLOGY:—*A. P. Coleman.*

Department 2, IV Year.

(A) *Pre-Cambrian Geology.*—An account of the Keewatin, Huronian and Laurentian rocks of Canada, with their distribution, structural relations and economic features, and briefer accounts of similar formations in the United States and elsewhere.

Works of Reference:—Reports of the United States and Canadian Geological Surveys, of the Bureau of Mines of Ontario, etc.

(B) *Pleistocene Geology.*—Lectures on the formation and distribution of the drift deposits of North America, with brief references to other regions. Glacial, Interglacial and Postglacial beds are described, changes of climate are discussed with their probable

causes, and the economic features of the clays, sands and gravels are pointed out. A weekly excursion is made during October and November to points of interest near Toronto, which is the centre of the most important development of Pleistocene in America.

(C) *Physiography.*—A course of lectures on the surface forms of the earth, with the geological factors which have produced them. The broad features of the earth, its plains, tablelands, hills, valleys, mountains, oceans, rivers and lakes are discussed in a general way, methods of topographical surveys and mapping are referred to, and the chief physiographic areas of Canada are described.

153. MINING GEOLOGY:—*A. P. Coleman.*

Department 2, IV Year; 1 hour per week; both terms.

A course of lectures on geological problems associated with mining, typical mining regions in Canada, the United States and elsewhere being discussed from the geological side.

Works of reference:—Mineral Industry and the books mentioned under (A).

154. GEOLOGICAL EXCURSIONS:—*A. P. Coleman.*

Department 2, IV Year.

Trips to points of interest in the vicinity of Toronto.

155. ORE DEPOSITS:—*A. P. Coleman.*

Department 2, III Year; 1 hour per week; both terms.

Discussion of the origin and classification of ore deposits in a general way, the mode of occurrence of the chief metals, and statistics of production, special attention being given to the metals mined in Canada.

156. ECONOMIC GEOLOGY:—*W. A. Parks.*

Department 2, III Year; 1 hour per week; both terms.

Laboratory work on ores, manner of occurrence, vein structure, etc. Geological maps of typical mining regions.

MINERALOGY.

157. ELEMENTARY MINERALOGY:—*J. E. Thomson.*

Department 5, I Year; Department 2, II Year; 2 lectures per week; first term.

After introducing the student to the chief chemical, physical and crystallographic characteristics of minerals, the course becomes descriptive and deals with about one hundred of the minerals most important from the industrial or scientific point of view.

Text books:—Minerals and how to study them—Dana; Text Book of Mineralogy—Dana.

158. MINERALOGY:—*A. L. Parsons, J. E. Thomson.*
Department 5, I Year; 4 hours per week, first term; 3 hours per week, second term.
Introduction to blow-pipe analysis, determination of minerals by inspection and physical tests.
Text books:—Text Book of Mineralogy—Dana; Mineral Tables—Eakle; Determinative Mineralogy and Blow-Pipe Analysis—Brush-Penfield.

159. PRIMARY MINERALOGY:—*A. L. Parsons.*
Department 1, II Year; 2 hours per week; first term.
A very brief introduction to the study of minerals and rocks.
Text books:—Minerals and how to study them—Dana; Handbook of Rocks—Kemp.

160. MINERALOGY:—*A. L. Parsons, J. E. Thomson.*
Department 2, II Year; 1 hour per week, first term; 3 hours per week, second term.
Determination of minerals by inspection and by means of physical tests; introduction to blow-pipe practice.
Text books:—Mineral Tables—Eakle; Determinative Mineralogy and Blow-pipe Analysis—Brush-Penfield.

161. MINERALOGY:—*T. L. Walker, A. L. Parsons, J. E. Thomson.*
Department 1, II Year; 1 hour per week, first term; 2 hours per week, second term.
Determination of minerals by inspection and by means of physical tests; study of common rock types and their identification.
Text books:—Mineral Tables—Eakle; Handbook of Rocks—Kemp.

162. MINERALOGY:—*A. L. Parsons.*
Department 5, II Year; 1 hour per week; second term.
Introduction to the study of rocks; determination of minerals and rocks by means of tables based on the physical properties.
Text books:—Mineral Tables—Eakle; Handbook of Rocks—Kemp.

163. ELEMENTARY PETROGRAPHY:—*T. L. Walker.*
Department 2, III Year; 1 hour per week.
A course of lectures and laboratory work introducing the student to the macroscopic study of rocks.
Text books:—Handbook of Rocks—Kemp; Rocks and rock minerals —Pirsson.

164. MINERALOGY:—*T. L. Walker.*
Department 2, III Year; 2 hours per week.
Determination of minerals by means of the blow-pipe and physical properties.
Text books:—Mineral Tables—Eakle; Determinative Mineralogy and Blow-pipe Analysis—Brush-Penfield.

165. GENERAL PETROGRAPHY:—*T. L. Walker.*
Department 2, IV Year. 1 hour per week, first term; 2 hours per week, second term.
Study of the chief rock-forming minerals and of some phases of petrography not covered in the course of the previous year.

166. PETROGRAPHY:—*T. L. Walker.*
Department 2, IV Year; 2 hours per week; both terms.
Study of the chief rock-forming minerals, of rocks in thin sections and in hand specimens.
Text books:—Rocks and Rock Minerals—Pirsson; Minerals in Rock Sections—Luquer.

167. CRYSTALLOGRAPHY:—*A. L. Parsons.*
Department 5, III Year; 1 hour per week.
A course devoted to lectures and practical work on the geometrical and optical properties of crystals, preparing the student for the study of rocks in thin sections and for the examination of crystallized substances, natural and artificial, under the polarizing microscope.

MINING, ASSAYING AND ORE DRESSING.

170. MINING:—*H. E. T. Haultain.*
Department 2, II Year; 1 hour per week; second term. Department 8, II Year; 1 hour per week; both terms.
An introduction to the study of mining and ore dressing methods.

171. MINING AND ORE DRESSING:—*H. E. T. Haultain, F. C. Dyer.*
Department 2, II Year; 3 hours per week; second term.
Introductory work with rock-drills and various ore dressing appliances.

172. MINING:—*H. E. T. Haultain, F. C. Dyer.*
Departments 2 and 8, III Year; 1 hour lecture per week, both terms; 3 hours' laboratory work per week, one term.
General mining methods.

173. ASSAYING:—*H. E. T. Haultain, R. B. Stewart.*
Departments 2, 5 and 6, III Year; 1 hour lecture per week, one term; 3 hours' laboratory work per week, both terms.
Assaying of various ores for gold, silver, lead and copper.

174. ASSAYING:—*H. E. T. Haultain, R. B. Stewart.*
Department 2, IV Year; 1 hour lecture per week, one term; 3 hours' laboratory work per week, one term.
Continuation of the work of III Year.

175. MINING:—*H. E. T. Haultain.*
Department 2, IV Year; 1 hour lecture per week; both terms.
Special mining methods, examinations, reports.

176. MILLING:—*H. E. T. Haultain, F. C. Dyer.*
Department 2, IV Year; 3 hours' laboratory work per week; both terms.
Advanced work with ore dressing appliances, complete mill tests.

177. ORE DRESSING:—*H. E. T. Haultain.*
Departments 2 and 8, III Year; 1 hour per week; both terms.

179. ORE DRESSING:—*H. E. T. Haultain.*
Department 2, IV Year; 1 hour per week; both terms.

METALLURGY.

180. METALLURGY:—*G. A. Guess.*
Departments 2, 5 and 6, IV Year; 1 hour per week; both terms.
Advanced studies in the metallurgy of gold, silver, copper and lead, etc.

181. FERRO-METALLURGY:—*T. R. Loudon.*
Departments 1, 2, 3, 5, 6 and 7, III Year; 1 hour per week; both terms.
The physical properties of iron and steel and the circumstances that influence the strength, etc., of iron. The different modes of manufacture of iron and steel and the effect of different processes of making on the resulting products; explanations of specifications for iron and steel adopted by engineers.

182. METALLURGY:—*G. A. Guess, W. S. Bishop.*
Department 2, IV Year; 6 hours' laboratory work per week; second term.
Calibration of pyrometers, blast furnace smelting and copper converting, cyanidation, acid leaching of copper ores, electrolytic refining of lead and copper, electrometallurgy.

183. METALLURGY:—*G. A. Guess, W. S. Bishop.*
Departments 2, 5 and 6, II Year; 1 hour per week; one term.
An introduction to the study of general metallurgy.

184. METALLURGY:—*G. A. Guess.*
Departments 2, 5 and 6, III Year; 1 hour per week; both terms.
General metallurgy of gold, silver, lead and copper.

185. METALLURGY:—*G. A. Guess.*
Department 8, II Year; 1 hour per week, first term, 2 hours per week; second term.
A lecture course in the study of metallurgical fuels, their use, preparation, calorific value and temperature of combustion; introduction to the study of metallurgical processes. Problems.

186. METALLURGY:—*G. A. Guess.*
Department 8, III Year; 1 hour per week; first term; 4 hours per week; second term.
The uses, properties and metallurgy of the metals except iron, with special reference to copper, nickel, lead and zinc. The study of clays and their industrial uses. A laboratory course of 100 hours.

186*a*. METALLURGY:—*G. A. Guess, W. S. Bishop.*
Department 8, IV Year; 2 hours per week, both terms, and nine hours' laboratory work, both terms.
Lixiviation of copper ores, design and organization of plants, metallurgical book-keeping, metallurgical balance sheets, thermal balance sheets, electrometallurgy, electrolytic refining processes, a particular study of Canadian problems.

MATHEMATICS.

187. ALGEBRA:—*A. T. DeLury.*
All Departments, I Year; 2 hours per week; both terms.
Simple equations of one, two and three unknown quantities; quadratic equations of one and two unknown quantities; elementary treatment of variation, proportion and progressions; interest forms and annuities, permutations, combinations, binomial theorem.
Text book:—Intermediate Algebra—DeLury.

188. ANALYTICAL GEOMETRY:—*A. Baker.*
All Departments, I Year; 1 hour per week; both terms.
The course in Elementary Analytical Geometry covers the more familiar propositions in connection with the straight line, circle, parabola, ellipse and hyperbola. The subject is treated so as to illustrate the general methods of analytical geometry.

189. TRIGONOMETRY, PLANE:—*M. A. Mackenzie.*
All Departments I Year; 2 hours per week; both terms.
Trigonometrical ratios with their relations to one another, sines, etc., of the sum and difference of angles with deduced formulæ, solutions of triangles, expressions of the area of triangles, radii of circumscribed, inscribed and escribed circles.
Text book:—Practical Trigonometry—Plane and Fawdry.

190. CALCULUS, DIFFERENTIAL AND INTEGRAL:—*S. Beatty.*
Departments 1, 2, 3, 4, 6 and 7, II Year; Department 5, II Year, optional; 2 hours per week; both terms.
This is an elementary course in the infinitesimal calculus, but adequate to afford a knowledge of the character and methods of the subject and to enable students in chemistry, engineering, etc., to understand such of their text books as introduce the calculus.

191. TRIGONOMETRY, SPHERICAL:—*L. B. Stewart.*
Department 1, II Year; 1 hour per week; first term.
A course of lectures includes the derivation of formulæ and their application to the solution of triangles and to practical problems.
Text book:—Spherical Trigonometry—Todhunter and Leatham.

192. LEAST SQUARES, METHOD OF:—*L. B. Stewart.*
Department 1, III Year; 1 hour per week; first term.
The course of lectures includes: The general principles of probability, the law of error, direct measurements of equal and different weights; mean square and probable errors; indirect measurements; conditioned observations; applications to empirical constants and formulæ, etc.
Text book:—Least Squares—Merriman.

TECHNICAL PHYSICS.

195. ACOUSTICS:—*G. R. Anderson.*
Department 4, III Year.
Wave motion, propagation, reflection and transmission of sounds. Laws of vibrating strings, pipes and forks. Velocity of sound. Musical scales. Absorption of sound by various substances, use of deadening material in buildings. Amount of reverberation permissible and desirable in public buildings. Lectures and laboratory work, Fall term.

196. HYDROSTATICS:—*G. R. Anderson.*
All Departments, II Year.
Laws of fluid pressure and application to machines. Density of solids and fluids, theory of flotation.
Lectures and laboratory work, Spring term.

197. OPTICS:—*G. R. Anderson.*

All Departments, II Year.

Rectilinear propagation of light, illumination, photometry, light standards. Distribution of light by reflectors and diffusers, general and selective absorption, economic values of artificial lights.

Laws of reflection and refraction, theory of optical instruments.

Light considered as wave motion, dispersion, spectrum analysis, colour phenomena, polarization.

Lectures and laboratory work, Fall term.

198. HEAT:—*G. R. Anderson.*

Departments 1 and 5, III Year.

Generation and propagation of heat. General and industrial thermometry, calorimetry and pyrometry. Linear and cubical expansion, gas laws. Specific heat of solids, liquids and gases, latent heat of fusion and vaporization. Mechanical equivalent of heat. Carnot cycle.

Lectures and laboratory work, Fall term.

199. PHOTOGRAPHY:—*G. R. Anderson.*

Departments 1 and 4, III Year; Departments 3 and 7, IV Year.

The camera and its adjustments, lenses, shutters, screens. Plates for various purposes, films, prevention of halation. Lighting, exposure, development. Paper of various kinds, printing, enlargement and reduction, blue printing and allied processes. Record photography, photogrammetry and photo-surveying. Photography in colour.

Lectures Fall term, and laboratory work both terms.

SURVEYING.

205. SURVEYING:—*S. R. Crerar.*

Departments 1 and 2, I Year; 1 hour per week; both terms.

The lecture course includes the general principles; surveying with the chain, the compass and chain and the transit and chain; the applications of trigonometry to inaccessible heights and distances; mensuration of surfaces and solids, co-ordinate surveying, division of land, etc.

Text books:—Land Surveying—Gillespie; Theory and Practice of Surveying—Johnson.

206. FIELD WORK:—*S. R. Crerar.*

Departments 1 and 2, I Year; 9 hours per week; first term.

This course comprises testing chains; practice in chaining; a complete survey of a piece of land with the chain; keeping of field notes; the use of the compass and transit in surveying closed figures and traverse lines and in ranging straight lines; plotting by latitudes and departures, and otherwise computing areas.

207. SURVEYING:—*W. M. Treadgold.*
Departments 1 and 2, II Year; 1 hour per week; both terms.
This course of lectures takes up in detail, simple, reverse and compound curves as applied to railroad surveying. It also includes stadia, plane table and photographic surveying as applied to topographic work, and also the main features of mine and hydrographic surveying.
Text books:—Henck, Shunk, Searles, Allen (Field books for Engineers) Theory and Practice of Surveying—Johnson; Plane Surveying—Raymond.

208. FIELD WORK:—*W. M. Treadgold, E. W. Banting.*
Departments 1 and 2, II Year; 9 hours per week; first term.
This course of instruction embraces all adjustments of the transit, accurate determination of angles of closed figure, minor problems in triangulation—ordinary and special problems as applied to railroad work in regard to curves, simple, reverse and compound, profile levelling and plotting of profile.

209. SURVEYING AND LEVELLING:—*W. M. Treadgold.*
Departments 1 and 2, III Year; 1 hour per week.
This course of lectures takes up the work of the railroad engineer on construction, including profiles, cross sectioning, computation of volume of earthwork, overhaul, transition curves, laying out turnouts, frogs and switches, etc.
Also a discussion of trigonometric and barometric levelling.
Text books:—Field Engineering—Searles; Railroad Curves and Earthworks—Allen.

210. FIELD WORK:—*W. M. Treadgold, E. W. Banting.*
Departments 1 and 2, III Year; about 9 hours per week; first term.
This includes adjustments of levels and accurate check differential levelling, determination of profile, cross sectioning and computation of earthworth of located line on ground and plotting of same; also cross sectioning by use of hand level. A complete stadia topographic survey is made and plotted. The spiralling of curves on track already laid down and practical methods of locating and placing sidings and switches.

ADDITIONAL, FOURTH YEAR OPTIONS.

211. RAILWAY ENGINEERING:—*W. M. Treadgold.*
Department 1, IV Year; about 2 hours per week.
The object of this course is to make the student acquainted with the general principles of railroad and street railway engineering, and the subject will be studied from the standpoint of: economic

theory of location; train resistance; effect of grade, distance and curvature and rise and fall; maintenance of way; yards and terminals; tunnels, and street railway practice.

212. FIELD WORK:—*W. M. Treadgold.*

Department 1, IV Year; about 11 hours per week; first term.

The work consists of an original survey for a railroad some one or two miles in length, the work being conducted according to the most modern methods of location. Upon the completion of this work a contour map of the district surveyed is plotted in the drafting room and a line adjusted to it. This is staked out in the field, profiles taken and complete estimates of the cost of construction made.

213. SANITARY ENGINEERING.

Sanitary Chemistry (113).

Advanced Biology (63*a*).

Bacteriology (64).

Hydraulics (32*b*).

Sanitary Engineering:—A lecture course of 1 hour per week, one term, in which consideration is given to the problems of water supply and sewage disposal as viewed by the engineer. Some practice in the design of works from assumed data is afforded.

Reference books:—Sewage Disposal—Kinnicutt, Winslow & Pratt; Sewage Disposal—Fuller; Water Supplies—Turneaure & Russell.

214. HIGHWAY ENGINEERING:—

Department 1, IV Year.

A lecture and laboratory course of about 8 hours per week, dealing with materials, design and construction of highways and pavements and the testing of various materials used in such work.

215. STRUCTURAL ENGINEERING:—

Students in Civil Engineering who desire to specialize in the subjects best fitting them for designing or constructing engineers on bridge-building or other analogous work, may do so by selecting the Structural Engineering Option in the fourth year. In addition to the obligatory subjects, the following lecture and laboratory courses are provided for those selecting this option:

Theory of Structures (16).

Strength and Elasticity of Materials (17).

Iron and Steel (23).

Reinforced Concrete (22).

Structural Design (51).

Mill Building Design (24).

216. ARCHITECTURAL ENGINEERING:—

Architectural students desiring to give special attention to the structural design of buildings may do so by electing to take the Architectural Engineering Option in the fourth year. The following subjects, in addition to those required of all students in the fourth year in Architecture, are required:

Structural Design (51).
Mill Building Design (24).
Architectural Design (48*a*).

MODERN LANGUAGES.

217. FRENCH:—*P. Balbaud.*

Required in Department 4, optional in Departments 1, 2, 3 and 7, I and II Years; 1 hour per week; both terms.

An elementary course intended to train the student in the translation of scientific journals and treatises.

218. GERMAN:—*P. W. Mueller.*

Required in Departments 5 and 6, all years, optional in Departments 1, 2, 3 and 7, I and II Years; 1 hour per week; both terms.

An elementary course intended to train the student in the translation of scientific journals and treatises.

THESIS.

219. THESIS.

Required in all Departments, IV Year.

Each student is required to prepare a thesis of between six thousand and seven thousand words on a subject approved by Council. See circular of information.

VACATION WORK.

220. CONSTRUCTION NOTES. See special circular of information.

OUTLINE OF VACATION WORK.

CONSTRUCTION NOTES.

II and III Years.

The construction notes required consist of neat and complete dimensioned sketches in pencil of any structures, machines or plants which may be of interest. Any object chosen should be represented and dimensioned in such a manner that it could be completely constructed from the notes as the only available information.

From students in Department 2, who have been actually engaged during the summer with Government or other approved geological survey parties, geological field notes will be accepted in lieu of construction notes.

MASTER OF APPLIED SCIENCE DEGREE.

1. A candidate for the degree of Master of Applied Science (M.A.Sc.) shall hold the degree of Bachelor of Applied Science (B.A.Sc.) of this University.

2. He shall spend not less than one academic year in attendance as a student, in the Faculty of Applied Science, on a course of study approved by the Council.

3. He shall present a satisfactory thesis on a subject approved by the Council.

4. He shall pass such examinations as the Council may decide.

5. The candidate must register at the beginning of the academic year.

PROFESSIONAL DEGREES.

The attention of graduates is directed to the following regulations respecting professional degrees.

The following degrees have been established: Civil Engineer (C.E.), Mining Engineer (M.E.), Mechanical Engineer (M.E.), Electrical Engineer (E.E.), Chemical Engineer (Chem.E.), subject to the following regulations:

1. A candidate for one of the said degrees shall hold the diploma of the School of Practical Science or of the Faculty of Applied Science and Engineering and the degree of Bachelor of Applied Science except in the case provided for in clause 11 hereunder.

2. He shall have spent at least three years after receiving the degree of Bachelor of Applied Science in the actual practice of the branch of engineering wherein he is a candidate for a degree.

3. Intervals of non-employment or of employment in other branches of engineering shall not be included in the above three years. It shall not be necessary that the several periods requisite to make up the said three years be consecutive.

4. Satisfactory evidence shall be submitted to the University examiners as to the nature and length of the candidate's professional experience for the purpose of clauses 2 and 3.

The Examiners shall satisfy themselves by oral or written examinations in regard to the candidate's experience and competence.

5. The candidate shall prepare an original thesis on some engineering subject in the branch in which he wishes a degree, the said thesis to be accompanied by all necessary descriptions, details, drawings, bills of quantities, specifications and estimates.

The candidate may be required at the option of the Examiners to undergo an examination in the subject of this thesis.

6. Notice in writing shall be sent to the Secretary not later than the first day of February, informing him of the degree to which the candidate wishes to proceed and of the title of his proposed thesis for the approval of the Examiners.

7. The evidence under clause 4, and the thesis, with accompanying papers, described in clause 5, shall be sent to the Secretary not later than the first day of April.

8. The candidate shall be required to present himself for examination in the month of April at such time as may be arranged by the Examiners.

9. The fee for any one of the said degrees shall be twenty dollars, and shall be paid to the Bursar not later than the first day of April.

10. The thesis, drawings, and other papers submitted under clause 7 shall become the property of the University.

11. Candidates who graduated from the School of Practical Science before June, 1905, shall not be required to hold the degree of Bachelor of Applied Science.

EXTRACTS FROM SURVEY ACTS.

From the Ontario Act Respecting Land Surveyors and Survey of Lands (R.S.O.).

"26. Any person serving as an apprentice as hereinbefore provided, may, with the permission of the Board of Examiners, attend the Ontario School of Practical Science, or any school, college or university, the course of study in which is, in the opinion of the Board, sufficiently similar to that in the Ontario School of Practical Science, for the purpose of taking any course of study which includes any subject required for the final examination for admission to practise as a land surveyor, but the total period of such apprenticeship and of course of study shall not exceed the

period of four years from the date of the articles of apprenticeship as above mentioned, and not less than three years of the said period of four years shall be passed in the actual service of a practising Ontario Land Surveyor.

* * * * * * * *

"28. The privilege of a shortened term of apprenticeship shall also be accorded to any graduate of the Royal Military College at Kingston or of the Ontario School of Practical Science in civil engineering or in mining engineering, or of the McGill College, Montreal, in civil engineering or in mining engineering, and such person shall not be required to pass the preliminary examination hereinbefore required for admission to apprenticeship with a land surveyor, but shall only be required to serve under articles with a practising land surveyor duly filed as required by section 32 of this Act, during twelve successive months of actual practice, after which, on complying with all the other requirements, he may undergo the examination prescribed by this Act.

"29. Such person at any time during his apprenticeship may, with the permission of the Board of Examiners, attend the Ontario School of Practical Science, or any school, college or university, the course of study in which is, in the opinion of the Board, sufficiently similar to that in the Ontario School of Practical Science, for the purpose of taking any course of study which includes any subject required for the final examination for admission to practise as a land surveyor, but the total period of such apprenticeship, and of course of study, shall not exceed the period of two years from the date of the articles of apprenticeship as above mentioned, and not less than twelve months of the said period of two years shall be passed in the actual service of a practising Ontario Land Surveyor."

From Act Respecting Manitoba Land Surveyors.

"28. (1) The privilege of a shortened term of apprenticeship shall be accorded to graduates of the Royal Military College of Canada and to graduates in civil engineering of the University of McGill College of Montreal, the School of Practical Science of Toronto, the School of Mining at Kingston, and graduates of Manitoba University who have taken first or second class honours in the special course in mathematics; and such graduates shall not be required to pass the preliminary examination hereinbefore prescribed for admission to apprenticeship with a land surveyor, but shall only be required to serve under articles with a practising land surveyor, duly filed as required by section 24 of this Act, during twelve successive months of actual practice of which at least six months shall be at actual practice in the field, after which, on complying with the other requirements of this Act, he may undergo the examination for commission to practise prescribed by this Act."

From British Columbia Land Surveyors' Act, 1905.

"52. Whosoever shall have followed, during at least two years, a regular course of studies in all the branches of the sciences required by law in order to be received as a land surveyor; who has attended the lectures of a British university or college where a complete course of theoretical and practical instruction is given in civil engineering, physics, and all other branches of sciences required by law in order to be admitted as a land surveyor, and who has received from such university or college, after a regular examination, his diploma or degree of a civil engineer or land surveyor, on satisfying the Board that he is duly qualified as aforesaid, may, without undergoing the examination for admission to the study of land surveying, be received as a student by any member of the Corporation practising in this Province, and shall be bound to perform only twelve months' actual service in the field as such, or, if he has obtained his degree or diploma as a civil engineer or land surveyor in less than two full years, then only such time of service which, added to the time he has devoted to his course of studies, shall complete the period of three full years; and, at the expiration of the said active service, such person, on complying with the other provisions of this section, shall have the right to present himself and undergo the examination required by law, and, if qualified, to be admitted to practise as a land surveyor for the Province as if he had served his three full years under his indentures with a practising land surveyor; but instead of paying fifty dollars he shall be obliged to pay sixty dollars as fees for his examination and commission as land surveyor."

The above section is to be taken collectively as a whole. No separate clause or sentence can be applied to any particular case.

From the Dominion Lands Act, 1908.

"Every graduate in surveying of the Royal Military College of Canada, and every person who has followed a regular course of study in all the branches of education required by this Act for admission as a Dominion land surveyor, for at least two years, in any college or university where a complete course of theoretical and practical instruction in surveying is organized, and who, after examination, has thereupon received from such college or university a diploma or certificate, shall be exempt from serving three years as aforesaid, and shall be entitled to examination for a commission after being admitted upon examination as aforesaid as an articled pupil and serving one year under articles with a Dominion land surveyor, including six months' actual practice with him in the field, on producing an affidavit from the said surveyor in said Form C, together with his own affidavit in said Form D, that he has served for one year as herein provided; but it shall rest with the Board to decide whether the course of instruction in such college or university meets the requirements of this section.'

EXTRACT FROM THE ONTARIO ARCHITECTS' ACT.

"Any student who has matriculated in Arts in any university in His Majesty's dominions, or in the Ontario School of Practical Science, shall not be required to pass the preliminary examinations.

"23. Any person who applies for admission to registration as an architect after the coming into force of this Act, shall not be less than twenty-one years of age, shall have served as a student not less than five years with a principal or principals entitled to register under this Act, or with any other principal or principals approved by the Council, and have passed such qualifying examinations as may be required by this Act.

"24. (3) Any person who has graduated from the Ontario School of Practical Science shall be required to serve only three years as a student, one of which three years may be served during the vacation of such school.

"(4) Upon and after the passing of this Act, students shall serve such term as is required to be served by the provisions of this Act, under indenture to a registered architect, which indenture and any assignment thereof with affidavit of execution thereto attached shall be filed with the Registrar upon payment of such fees as the Council may by regulation direct."

LABORATORY EQUIPMENT.

THERMODYNAMIC AND MECHANICAL LABORATORY.

The University in 1909 completed the erection of a large, well-equipped building for the accommodation of the steam, gas, mechanical and hydraulic laboratories. A more complete description of the laboratories has been published elsewhere, so that the present description is only intended to give the main features.

The part of the building set apart for thermodynamics and other mechanical work is the ground floor of a room 60 ft. × 155 ft. This room is lighted entirely from the roof in a very perfect way. A part of the space 40 ft. wide running the entire length of 155 feet is served by a 3-ton travelling crane and contains the following equipment:

50 h.p. Brown engine with separate jackets on both heads and barrel of cylinder.

Two-stage Rand air compressor having compound steam cylinders, each fitted with Meyer cut-off gear. The low pressure air cylinder has Corliss inlet gear.

30 h.p. high-speed Leonard tandem compound engine with shaft governor.

15 h.p. high-speed McEwen engine.

75 h.p. two-line compound Willans engine.

15 h.p. DeLaval turbine with special nozzles for condensing and non-condensing tests.

Two 15 h.p. Leonard engines with different types of valves, which are used for valve setting.

There are also two surface condensers with air pumps so arranged that any engine in the laboratory may be made to exhaust into the atmosphere through an open heater or into one of the condensers, the change from one arrangement to the other being accomplished in a few minutes without the aid of valves.

The laboratory further contains:

A 3-ton York refrigerating machine with tanks.

An Amsler transmission dynamometer.

Apparatus for testing injectors and steam pumps.

Numerous other pieces of apparatus and instruments.

The work on internal combustion engines and producers is performed on the following:

18 h.p. Canada suction gas producer.

14 h.p. National gas engine arranged for various compressions and points of ignition.

10 h.p. Fielding and Platt engine for city gas or coal oil, having various adjustments.

8 h.p. Otto gas engine.

6 h.p. marine gasoline engine.

Ericsson air engine.

Various accessories to above machines.

Steam for the laboratory is supplied by two 50 h.p. and one 100 h.p. Babcock and Wilcox boilers, the latter having an internal superheater. These boilers are located in a separate boiler room. They are used for experimental work only and are fitted up for testing. The gases pass up through two independent chimneys, and these have been arranged so that the draft and other conditions in the chimney at any point of its height may be examined.

In smaller work-rooms off the main laboratory are placed belt and oil testing machines, apparatus for testing the efficiency of gears and machines, and for experiments in the balancing of machinery.

HYDRAULIC LABORATORY.

The hydraulic laboratory occupies two floors each 40 feet x 112 feet, which are well lighted by large windows on the side and end.

The water for the experimental work is pumped through the various pieces of apparatus from a well by means of two turbine pumping units, both of which are driven by a Belliss and Morcom compound engine of 125 h.p. running at a speed of 525 revs. per minute. Both engine and pumps have been installed with a view to using them in experimental work as well as for supply of water for other apparatus used in the laboratory.

The pumping units are capable of delivering one cubic foot of water per second against heads of 250 feet and 300 feet respectively. These units are designed and connected up so that they may be run in series giving the above discharge at 550 feet head or they may be run in parallel giving double the discharge at a lower head. Each pumping unit consists of two two-stage pumps mounted on a common base and driven by a single pulley, and the construction and piping are such that each two-stage pump may be driven separately or that all may be driven at once, discharging separately one cubic foot per second at about 125 feet head through each of four independent pipes, or else the pumps may be run in series or in parallel. The scheme is thus well adapted to laboratory work, and under the heads used on reaction turbines about six cubic feet per second may be obtained.

The laboratory further contains a large vertical steel tank 5½ feet diameter by 34 feet high with arrangements for the attachment of nozzles and other mouthpieces, etc. Connections are also arranged for reaction turbines, the tank acting as a reservoir.

The discharge from the turbines or nozzles is measured in a weir tank nearly 6 feet wide and 21 feet long, containing a contracted weir 4½ feet wide. This weir may be calibrated by two weighing tanks, each having a capacity of about 240 cubic feet.

There are three reaction turbines and two impulse wheels all ready for experiment, the power being measured by brakes and the water by weir or orifices. Amongst the reaction turbines may be mentioned the one designed and built by Escher Wyss & Co., specially for the laboratory.

Smaller orifice and weir tanks, each about 3 x 3 x 12 feet with necessary measuring tanks, are arranged for instruction in coefficients of various kinds and practice with weirs and orifices.

A Venturi meter and other meters, also an hydraulic ram and similar devices are available for testing, and good facilities have been arranged for investigating friction and other properties of pipes and fire hose.

For special investigations on turbine and centrifugal pumps, other pumps in addition to those already described have been arranged.

The basement of the laboratory contains an open trough 5 feet wide, about 110 feet long, with a large weir at one end. It is intended to use this trough for experiments on the flow in open channels, for measurements of large discharges by means of the weir, and for experiments with current meters and Pitot tubes.

Numerous pieces of smaller apparatus, together with all instruments required, have also been provided, and the laboratory equipment is believed to be very complete.

DONATIONS TO THE THERMODYNAMIC AND HYDRAULIC LABORATORIES.

The following donations to the equipment of the laboratories have been made through the kindness of those mentioned :

50 h.p. Wheeler Surface Condenser, presented by Mr. F. M. Wheeler, New York.

Blake Feed Pump, presented by the manufacturers.

6-inch New American Turbine, presented by Wm. Kennedy & Sons, Owen Sound, Ont.

Two Crown Water Meters, presented by the National Meter Co., New York, through Mr. M. Warnock, Toronto.

Rock Drill, presented by Sullivan Machinery Co., New York, through Mr. A. E. Blackwood, '95.

Marine Gasoline Engine, presented by Canadian Fairbanks Co., Montreal.

Two engines with different types of valve, presented by Messrs. E. Leonard & Sons, London, Ont.

Bundy trap from American Radiator Co., through Messrs. Russell & Gifford.

Dunham steam trap from C. A. Dunham Co.

Sectional models of valves from American Radiator Co.

Sectional model Mason Reducing Valve by Russell & Gifford.

Tanks, etc., by John Inglis Co. Pressure Fan from Sheldons Ltd., Galt.

In addition to the above, other firms have materially assisted by offering apparatus at or below cost price, among whom may be specially mentioned, The Canadian Rand Drill Co., Sherbrooke, Quebec.

PHYSICAL LABORATORIES.

The optical laboratory is equipped with Weinhold optical benches and accessories for determining the constants of mirrors and lenses and for demonstrating the construction and use of telescopes, field glasses, microscopes, etc. There is also a full equipment of optical instruments, including telescopes, microscopes, field glasses, comparators, spectrometers, level tester, photometers of various types, focometer, dynamometer, cathetometer, polariscope, projecting lanterns, etc.

The photographic laboratory is supplied with cameras for viewing, copying, enlargement and reduction, a spectroscopic camera and an electric blue printing machine and the necessary dark-rooms.

The hydrostatic laboratory contains a supply of various forms of hydrometers, hydrostatic balances, Jolly balance, Mohr's balance, hydrostatic press, vacuum pumps, gauges, etc.

The heat laboratory is equipped with a full supply of calorimeters and accessories for determinations of latent and specific heat, expansion apparatus, air thermometer, apparatus for verification of Boyle's law and pressure and boiling point curve, and for determination of the absolute expansion of mercury. Callendar's apparatus for determination of the mechanical equivalent of heat.

The acoustical laboratory is provided with sonometer, siren, forks ordinary and electric, Lissajous' and Melde's apparatus, organ pipes of various forms, manometric flame apparatus and a special equipment for work in architectural acoustics consisting of torsion chronograph, electropneumatic wind chest and standardized organ pipes and other accessories.

ELECTRICAL LABORATORIES.

Galvanometer laboratory.—The equipment of this laboratory is, in part, as follows: A set of D'Arsanval galvanometers conveniently located at tables about the laboratory, a set of resistance boxes for use with the same; measuring instruments, including ammeters, voltmeters, wattmeters, potentiometers and standard cells. Apparatus for the measurement of low resistance, including a ductor, and for high resistance, including a megger, several Carey Foster outfits and a Roller bond tester. There are also experimental lines for practice in locating faults, photometer outfits with rotating devices and various types of arc lamps.

Another room is fitted more especially for calibration of electrical instruments for alternating and direct currents. About one hundred and twenty portable measuring instruments are available for students' use, also standard instruments, including Weston laboratory standards, Kelvin balances and a Wolff potentiometer, with which the portable instruments may be compared.

Machine laboratory.—This laboratory, occupying two large rooms, contains twenty-five dynamos and motors varying in capacity from two to twenty kilowatts, adapted for experiments illustrating the properties of compound shunt and series dynamos and motors, arc machines, etc. Switch-boards, numerous rheostats, lamp racks, starting boxes, circuit breakers, flexible cables, brakes, torsion dynamometers, tachometers, etc., are available for use with the machines.

This laboratory also contains two 15 kw., 25 cycle and two special 15 kw., 60 cycle General Electric polyphase revolving field alternators direct driven by motors, two rotary converters of 10 kw. and 5 kw. capacity, a 7½ kw. General Electric polyphase induction motor with slip ring rotor, Westinghouse three phase squirrel cage induction motors, Wagner single phase motor, Westinghouse single phase series motor, Westinghouse alternator, and several three phase and single phase induction motors; also transformers, reactive coils, and other details, as in the direct current sections of the laboratory described above, for experiments on the properties of alternating currents and alternating current apparatus in general. A constant-current transformer with its load of six series arc lamps, a three-element oscillograph, for studying wave forms, a high potential transformer and a mercury arc rectifier may also be mentioned. The students are supplied with Weston, Westinghouse and Thomson portable instruments for measuring purposes.

A motor generator set is being installed, comprising a 65 h.p motor driving on the same shaft a 30 k.w. 110 volt d.c. generator and a 30 k.w. 60 cycle 110 volt alternator with direct connected enciter.

Magnetic laboratory.—A room is fitted with appliances for the study of saturation and hysteretic properties of samples of iron and steel, as well

as a transformer for determining dielectric strength. The room also serves for exercise in winding models of direct current armatures, alternators, etc.

High potential transformer.—A 20 kw. transformer of 200,000 volts is being installed in a separate room.

CHEMICAL LABORATORIES.

The Chemical laboratories are situated in the western half of the Chemistry and Mining building, on the first and second floors. The rooms are large and well lighted, and are supplied with the usual modern equipment.

The first and second year laboratory for qualitative work has accommodation for 112 students, each working space being supplied with water, gas and fume cupboard. The laboratory for quantitative analysis will accommodate 48 students, and is supplied with commodious fume cupboards and all necessary apparatus. A laboratory with working places for 36 is provided for the students engaged in the study of technical chemistry; it is equipped with appliances for the preparation and testing of chemical products. A laboratory for fourth year students with accommodation for eight workers has just been fitted up. Each of these laboratories has its own balance room adjoining, furnished with instruments from the best makers and adapted to the particular objects in view.

In addition there are rooms set apart for gas analysis, electrolytic analysis, and a specially constructed fireproof laboratory for combustion, crucible and bomb furnaces. A calorimeter room has been equipped in the basement. Each of these laboratories is supplied with apparatus of the most approved design, providing excellent facilities for the prosecution of work in analytical and technical chemistry.

ELECTROCHEMICAL LABORATORIES.

The Electrochemical laboratories which are situated in the Chemistry and Mining building are provided with special facilities for electrolytic work, including a large storage battery and electroplating dynamo with tanks as well as a complete set of apparatus and electrical measuring instruments. The experimental work on electric furnaces is performed in two rooms specially equipped for this purpose with rheostats and switchboard connections to a 120 kw. d.c. generator, which supplies the current required.

ASSAYING LABORATORIES.

Two assaying laboratories are situated in the basement of the Chemistry and Mining building. One has a floor space of 17 feet x 47 feet, and the other 28 feet x 37 feet. Adjoining each is a room 15 feet x 11 feet, with the necessary equipment for the wet work in connection with assaying. Common

to both laboratories is a balance room furnished with gold balances set on a concrete pier. Each of the laboratories contains a number of melting holes for crucible fusions, various gas furnaces both for crucibles and muffles, and two large brick muffle furnaces.

The furniture comprises lockers for the students, tables for the pulp balances and the necessary cabinets and shelving.

Adjoining the assay laboratories is a preparation room (19 feet x 13 feet) which is equipped with a motor, crusher, pulverizer, sample grinder and all the necessary hand pulverizers, screens, etc., for preparing ores for assay.

METALLURGICAL LABORATORY.

Space has been provided in the basement of the Chemistry and Mining building. The laboratory contains a small blast furnace, a copper converter, a Steele Harvey tilting crucible furnace; an American Gas Co. muffle roasting furnace, a Hoskins resistance furnace for high temperature work, a Revelation kiln for clays and refractories. Blast is provided by a Connersville blower driven by a variable speed motor. The laboratory contains tanks for electrolytic precipitation and refining and a furnace for the production of aluminum. Facilities are provided for the investigation of fuels and clays. There is a storage room for ores and supplies and a students' room with lockers, wash-bowls and a shower-bath.

MILLING AND CONCENTRATING LABORATORY.

A detached building, 72 feet x 70 feet in area, contains the milling and concentrating equipment. It is heated, lighted and supplied with power from the main building, and is divided into two parts. The greater part, with 72 feet x 53 feet floor space, and 22 feet high, contains the milling and concentrating equipment. The machinery for the former operations consists of a five-stamp battery erected on concrete foundations, Challenge ore feeder, amalgamating plates, Wilfley table, a clean-up pan, steel settling tanks, a steel tank suspended from the roof girders to furnish a constant supply of water, and a track with travelling crawl to transport ore. This is driven by a 15 horse power motor.

The concentrating part consists of a set of five revolving trommels for wet screenings, four three-compartment jigs, a trough classifier delivering three products, and two revolving buddles, Wilfley Slimer, Deister Slimer, Richard's Pulsating Classifier, Richard's Pulsating Jig, a Behrend Dry Concentrator, a dry sizer, besides experimental apparatus of various kinds for experimenting on the falling rates of ore particles, the settling of slimes, surface tension action in grease and flotation methods, etc. The waste products run to the same settling tanks as the tailings from the stamp battery. The ore is handled by a travelling crawl. All the machinery in this part is driven by a 10 horse power motor.

The lower floor has been fitted up for lixiviation work with apparatus for the treatment of sands and slimes, different types of filter press, vacuum plant agitators, etc.

The plant throughout is intended mainly for experimental purposes and is made of such a size that numerous experiments can be carried out on small quantities of ore. Tests can also be made on lots of one or two tons.

The other part of the milling building with 72 feet x 17 feet floor space and 15 feet high is divided into four separate rooms. The largest of the four rooms has an area of 476 square feet and is devoted to the crushing and pulverizing of the ores preparatory to their treatment in the milling and concentrating room. It is isolated in order to confine the dusty operations as far as possible to this one room, and is equipped with a gyrating crusher of Hadfield's make, a set of Hamilton rolls 16 inches by 12 inches, platform scales for weighing ore, a jib crane, pulleys, buckets, etc., for handling the rock. An adjoining room contains a 30 h.p. motor for driving the machinery of the crushing department, and storage bins for ore, work bench, etc. Another room with 17 feet x 15 feet floor space is furnished with a magnetic separator of the Rowan-Wetherill type, driven by its own motor.

One room of the same size as the above remains available for future additions.

STRENGTH OF MATERIALS LABORATORY.

This laboratory is intended for the scientific and commercial testing of materials of construction such as iron, steel, timber, concrete and masonry.

It is supplied with the following:

An Emery 50-ton hydraulic machine, built by Wm. Sellers & Co., of Philadelphia, for making tests in tension and compression.

A 100-ton screw power machine, built by Riehle Bros., Philadelphia. It is designed for making tests in tension, compression, shearing and cross-breaking, and will take in posts 12 feet long and beams up to 18 feet in length.

A Riehle 10-ton screw power universal testing machine.

A Riehle 50-ton screw power universal testing machine.

A 15-ton single lever-machine, built by J. Buckton & Co., Leeds, England.

A torsion machine, built by Tinius Olsen & Co., Philadelphia, for testing the strength and elasticity of shafting. This machine will twist shafts up to 16 feet in length and 2 inches in diameter.

A hand power torsion machine of simple mechanical construction, specially designed for the testing of short shafts of a maximum diameter of one inch.

A Riehle transverse testing machine of 5,000 pounds capacity, adapted to specimens up to 48 inches in length.

A Riehle compressometer, with spherical seat attachment for the adjustment of specimens having slightly non-parallel faces. This compressometer will receive specimens up to 10 inches in length.

An Olsen compression micrometer of standard type.

A 20,000 pound Olsen, hand power, wire testing machine, specially fitted for testing wooden columns with both fixed and pivoted ends.

A Riehle abrasion cylinder, built to the standard required by the National Brickmakers' Association, adopted in 1901.

A Page Impact Machine for testing the toughness of road metals,

A diamond core-drlll for preparing specimens for the Page impact machine.

A two-cylinder Deval abrasion machine for testing the wear-resisting properties of road materials.

A Berry strain-gauge for spans of 3 inches and 8 inches.

A Nalder dividing engine. This may be used either for the precise division of scales or for the calibration of instruments intended for refined measurements.

A large number of extensometers of the usual degree of precision. These include the Bauschinger, Martens, Unwin, Ames, Riehle, Johnson, Henning (recording) and other types. In addition there are the usual scales, micrometers, telescopes and reflectors, voltmeters for the determination of metallic contact, and such other appliances as are necessary in the making of precise measurements.

The shop is equipped with a number of high-class machine tools specially fitted for reducing the specimens to the requisite shapes and dimensions with a minimum of hand labour. It is also supplied with the necessary appliances for making ordinary repairs and for making apparatus for special experiment and original investigation.

CEMENT TESTING LABORATORY.

This laboratory is fitted with all the ordinary moulds, sieves, balances, burettes, steaming and drying tanks, tables, and other appliances necessary in making the usual physical tests of a Portland cement. It is also supplied with completely equipped cabinets for individual work. In addition there are the following:

A Riehle 2,000 lb. machine fitted for either tension or compression.

A 2,000 lb. Riehle shot machine for tension.

A 2,000 lb. Fairbanks shot machine for tension.

A 1,000 lb. Olsen automatic shot machine fitted for tests in either tension or cross breaking.

An Olsen soapstone moist closet of modern design.

METEOROLOGICAL LABORATORY.

The department of surveying and geodesy is provided with all the ordinary field instruments, such as transits, levels, compasses, micrometers,

sextants, planimeters, plane tables, tapes, chains, etc., with which is carried on the instruction in practical field operations as detailed elsewhere.

A small laboratory is also established in the basement of the observatory described below, containing the necessary instruments for the refined measurements of geodetic surveying; as, a standard yard and metre, a Rogers 10-foot comparator, an invar base measuring apparatus, a Kater's pendulum with vacuum chamber, a level trier, micrometer microscopes, etc.

The geodetic observatory in connection with this department is used for the instruction of students of the fourth year in taking observations for time, latitude, longitude, and azimuth by the precise methods used in connection with a geodetic survey. It contains a 10-inch theodolite and zenith telescope by Troughton & Simms; an astronomical transit instrument and an 8-inch theodolite by Cooke; an electro-chronograph; a Howard astronomical clock; a Dent sidereal break-circuit chronometer; arithmometers, etc.

GEOLOGICAL AND MINERALOGICAL LABORATORIES.

In the Chemistry and Mining building on College Street the University possesses a modern laboratory for Geology and Mineralogy.

Courses are given in laboratory work, especially in personal examination of type sets of rocks, fossils, minerals and crystal models. These laboratory exercises serve to illustrate the introductory didactic instruction.

For the encouragement of pure crystallography the laboratories are supplied with goniometers of the various types, crystal models, appliances for the cutting of oriental crystal sections and for the physical examination of the same. Practical petrography is carried on in rooms provided with type sets of rocks, both macroscopic and microscopic. Advanced students are taught to make thin sections of rocks and fossils and to study them microscopically. For students in Mining a laboratory course in the interpretation of geological maps and sections is provided. Typical mining regions are studied in detail and an opportunity is afforded for the examination of specimens illustrating economic geology.

The laboratory for the preparation of thin sections of rocks, minerals and fossils is provided with electric diamond saws and grinding appliances for the various types of work incidental to the preparation of thin sections and museum material.

A room is also provided for advanced work in cartography and geological surveying.

The departments possess 28 petrological microscopes and 5 of other types, so that it is now possible to provide advanced students with instruments and sets of thin sections for their own especial use. The blowpipe laboratory contains 156 lockers, especially designed for apparatus for students.

MUSEUM.

The Geological and Mineralogical Museum of the University is open to students of the Faculty of Applied Science from 9 to 5 p.m. throughout the year.

The Museum is situated in the south-east corner of the ground floor of the Chemistry and Mining building.

The collections are restricted to such material as may serve to illustrate the courses of lectures given to undergraduate students in the Faculty of Applied Science. There are accordingly contained in this museum only the commoner rocks, minerals, fossils and ores.

LIBRARY.

Rooms have been set apart in the Engineering and the Chemistry and Mining buildings for the housing of such periodicals and other literature of the University Library as is of special interest to the students of this faculty.

SOCIETIES.

THE ENGINEERING SOCIETY OF THE UNIVERSITY OF TORONTO.

Officers for 1912-1913.

President	J. E. Ritchie.
1st Vice-President	W. T. Curtis.
Vice-Pres. Civil & Archl. Secs	F. S. Rutherford.
" *Mechanical & Elec. Secs*	M. F. Verity.
" *Chemistry & Mining Secs*	G. M. Smyth.
Recording Secretary	I. M. Macdonald.
Corresponding Secretary	C. C. Rous.
Treasurer	H. R. MacKenzie.
Permanent Secretary	H. Irwin, B.A.Sc.
Curator	G. Rankin.
Fourth Year Representative	H. A. Hawley.
Third Year Representative	H. N. Macpherson.
Second Year Representative	T. W. Crane.
First Year Representative	F. J. Matthews.
Senior "Varsity" Representative	J. A. P. Marshall.

The Society meets every second Wednesday during the academic year. Papers are read, and discussions are held on engineering subjects. The Society publishes a pamphlet monthly during the year, containing the best papers read at the meetings. A supply department is conducted by the Society, on a co-operative plan, through which instruments, drafting supplies, stationery, etc., may be purchased at a low cost.

UNIVERSITY OF TORONTO ELECTRICAL CLUB, 1912-1913.

President	R. J. Allen.
Vice-President	R. G. Matthews.
Secretary-Treasurer	F. R. Sims.
Councillors	W. B. Buchanan. P. H. Mills. E. D. Courtice.

The Society meets every second Thursday evening during the academic year for the discussion of papers relating to mechanical and electrical engineering problems too technical for consideration in the Engineering Society. The membership is limited to members of the senior and final years.

THE INDUSTRIAL CHEMICAL CLUB OF THE FACULTY OF APPLIED SCIENCE.

Officers for 1912-1913.

Honorary President.....
Honorary Vice-President.....
President.....
Vice-President.....
Secretary.....
Treasurer.....
Fourth Year Representative.....
Third Year Representative.....

The Industrial Chemical Club was organized in 1909 and consists of graduates and undergraduates of Departments 5 and 6. Its object is to promote the study of industrial chemistry and chemical engineering. Illustrated lectures preceded by an informal dinner and short musical program, are held fortnightly, and on the following day an excursion is made to one or other of the industrial chemical concerns located in the city or vicinity.

UNIVERSITY OF TORONTO ARCHITECTURAL CLUB, 1912-1913.

Honorary President.....John M. Lyle.
President.....B. R. Coon.
Vice-President.....L. C. M. Baldwin.
Secretary.....M. Denison.
Treasurer.....J. M. Robertson.
Councillors.....A. C. Wilson.
K. C. Burness.
F. A. Swinnerton.

ATHLETIC ASSOCIATION OF THE FACULTY OF APPLIED SCIENCE.

EXECUTIVE COMMITTEE, 1912-1913.

Honorary President.....Prof. C.H.C.Wright.
President.....J. J. Phillips.
Vice-President.....D. B. Gardner.
Secretary-Treasurer.....R. F. Davison.
Fourth Year Representative.....O. Holden.
Third Year Representative.....C. V. Perry.
Second Year Representative.....E. H. Jupp.
First Year Representative.....C. E. Gage.

The Athletic Association has full control over all athletic clubs using the name of the Faculty of Applied Science. The Executive Committee has power to suspend any one from the privileges of membership in the Association for any breach of its regulations, and controls the finances of all athletic clubs in the aforesaid Faculty. The annual membership fee of this Association is fifty cents.

No other moneys are collected for the support of athletics in the Faculty of Applied Science without the sanction of the Executive Committee.

RUGBY FOOTBALL.

The Mulock Cup, which was presented by Sir Wm. Mulock, M.A., LL.D., to the University of Toronto Rugby Football Club for inter-college competition, brings out each year a large number of contestants from the University and affiliated colleges.

RUGBY FOOTBALL CLUB OF THE FACULTY OF APPLIED SCIENCE.

Officers for 1912-1913.

Honorary President.....T. R. Loudon.
President.....R. S. Bell.
Manager senior team.....T. V. McCarthy.
Captain senior team.....F. J. Mulqueen.
Manager junior team.....J. P. Cavers.

LODGING AND BOARD.

Accommodation is readily obtainable in numerous private boarding-houses within convenient distance of the University, at a cost of from four dollars and a half a week upwards for comfortable lodging with board; or rooms may be rented at a cost from one dollar and a half per week upwards, and board obtained separately at moderate rates. A list of ac credited boarding-houses is kept by the Secretary of the University Young Men's Christian Association, and students are recommended to consult him with reference to the selection of suitable accommodation.

UNIVERSITY RESIDENCES.

By the generosity of Mr. and Mrs. E. C. Whitney and other friends, the University can now offer to some hundred and fifty men the peculiar advantages of residential life and excellent accommodation within its own grounds. The Residence, opened in November, 1908, consists of three Houses situated on the north side of Hoskin Avenue, opening upon a quadrangle, the fourth side of which is formed by Devonshire Place. They stand about two hundred yards to the north of University College and of the University Dining Hall and close to the University Gymnasium and Athletic Field. The buildings are known as the South, East, and North Houses.

Each House contains twenty-four single rooms, one single suite, one double room and eleven suites, a suite comprising a study and two bedrooms. A large room in each building, with an open hearth and a library, has been set aside as a common room. A lavatory with hot and cold shower baths is provided for every eight men. The buildings are heated by steam and lighted by electricity.

The University supplies the table, chairs, book-case, chiffonier, bed, mattress, pillows, linen, and window shades for each room; it is prepared to furnish a drop-light for a nominal rental.

Each occupant is charged $2.50 room-rent per week, payable to the Bursar four weeks in advance. The charge for each single suite is $3.50 per week. These charges cover heat, light, house-service, house-laundry, and the use of the telephone. There is no separate dining hall connected with the Residence, but board may be obtained at the adjacent University Dining Hall for $3.25 per week.

Applications for rooms must be made in writing to the Secretary of the Residence Committee (address the Registrar's Office) and must be accompanied by a deposit of $5.00. This deposit will be returned if the application be not granted or if the application be withdrawn in writing before September 8th. It will be returned in full at the end of the College year if the room key be given back and the room and furniture left in a satisfactory condition. The following principles govern the allotment of rooms: (i) No student, who as the result of the annual spring examinations is not assured of being able to proceed to the subsequent year, will be admitted

into the Residence. (ii) The rooms in each House will be distributed proportionately between the various Faculties and Years. (iii) Rooms will be reserved for members of the incoming First Year until September 18th. (iv) Applications will be considered in order of priority.

The University lays down three general rules, designed to prevent hazing. the use of intoxicants and gambling. The students in each House shall elect a House Committee, which is entrusted by the University with the making and enforcing of any other needed rules and with the maintenance of order. A member of the Faculty resides in each House to act as friend and adviser to the men in residence.

GYMNASIUM AND ATHLETIC GROUNDS.

"The University gymnasium was completed and equipped in 1893. It is fully provided with the best and most modern appliances for physical culture, and contains a running track, shower baths and swimming bath. besides the necessary dressing rooms and other conveniences. A competent instructor in gymnastics is in constant attendance to superintend and direct the exercise of students. In addition to the lawn in front of the Main University Building and a campus in the rear, a large plot of ground on Devonshire Place has been set apart as an athletic field. By this addition the facilities for football, cricket, tennis and other outdoor athletic sports are doubled, as compared with previous accommodation; and by these grounds, in conjunction with the gymnasium, ample opportunity is afforded to all students for healthful exercise and physical development. To assist in meeting the expenses of the gymnasium, a nominal annual fee is imposed on those who avail themselves of its advantages. The supervision of all athletic matters has been entrusted by the Council to an Athletic Board, consisting of six members appointed from the Faculty and officers of the Athletic Association. All applications of clubs for the use of grounds must be made annually to this Board. All such applications must be accompanied by a list of officers. In the case of new clubs the list of officers must be accompanied by particulars as to the organization and objects of the club making application."

STUDENTS' UNION BUILDING.

"In 1894 additions were made to the front of the building in which the gymnasium is situated, consisting of a large hall for public meetings, a reading room and committee rooms. This additional accommodation is available for the work of the various students' societies, and for academic purposes. Applications for the use of rooms, accompanied by a list of officers and a copy of the constitution of the society making application, must be made, through the President, to the joint committee of the Councils on Gymnasium and Students' Union Building, at the beginning of the season, or from time to time as occasion requires. Arrangements have also been made by which recognized societies may obtain the use of committee rooms on application to the janitor of the Students' Union Building."

CALENDAR 1914-1915.

1914—Sept. 1 Applications for Registration received.
Last day for receiving applications for Supplemental Examinations.
18 Supplemental Examinations begin.
25 Meeting of Faculty Council.
28 Enrolment.
29 First Term begins.
Last day for receiving Vacation Work.
President's address to students at 3 p.m.
Oct. 2 Meeting of Faculty Council.
7 Meeting of Engineering Society.
21 Meeting of Engineering Society.
Nov. 4 Meeting of Engineering Society.
6 Meeting of Faculty Council.
18 Meeting of Engineering Society.
Dec. 2 Meeting of Engineering Society.
4 Meeting of Faculty Council.
16 Meeting of Engineering Society.
18 First Term ends at 12 noon.

1915—Jan. 5 Second Term begins.
Last day for receiving Theses for B.A.Sc.
8 Meeting of Faculty Council.
13 Meeting of Engineering Society.
27 Meeting of Engineering Society.
Feb. 5 Meeting of Faculty Council.
10 Meeting of Engineering Society.
24 Meeting of Engineering Society.
Mar. 5 Meeting of Faculty Council.
10 Meeting of Engineering Society.
12 Annual elections of Engineering Society.
24 Annual Meeting of Engineering Society.
April 1 Meeting of Faculty Council.
2 Good Friday—Building closed.
8 Lectures and practical work close.
12 Annual Examinations begin.
May 7 Meeting of Faculty Council.
June 11 Annual Commencement.

The buildings will be closed on all public holidays and daily at noon during July and August.

T. R. ROSEBRUGH, M.A., *Professor of Electrical Engineering.*	92 Walmer Rd.
L. B. STEWART, O.L.S., D.T.S., *Professor of Surveying & Geodesy.*	161 Admiral Rd.

J. J. TRAILL, B.A.Sc., 34 Wolfrey Ave.
Lecturer in Hydraulics.

W. M. TREADGOLD, B.A., 13 Woodlawn Ave. E.
Assistant Professor of Surveying.

C. H. C. WRIGHT, B.A.Sc., MEM. O.A.A., 419 Markham St.
Professor of Architecture.

C. R. YOUNG, B.A.Sc., M. Can. Soc. C.E., 98 Hilton Ave.
Assistant Professor of Structural Engineering.

Sessional Appointments.

O. F. ADAMS, B.A.Sc., 132 Ulster St.
Demonstrstor in Electrical Engineering.

R. J. ALLEN, B.A.Sc., 325 Davenport Rd.
Demonstrator in Electrical Engineering.

L. M. ARKLEY, M.Sc., A.M. Can. Soc. C.E., 61 Indian Rd. Cres.
Lecturer in Mechanical Engineering.

L. A. BADGLEY, B.A.Sc., 1055 Bathurst St.
Demonstrator in Drawing.

P. A. BALBAUD, B.esL., 626 Huron St.
Lecturer in French.

J. L. BANKS, 304 Jarvis St.
Instructor in Modelling.

E. W. BANTING, B.A.Sc., 330 St. George St.
Lecturer in Surveying.

W. S. BISHOP, A.B. (Cornell), 69 Havelock St.
Lecturer in Metallurgical Engineering.

W. B. BUCHANAN, B.A.Sc., 104 Charles St. W.
Demonstrator in Electrical Engineering.

H. BROWNLEE, B.A., 404 Dovercourt Rd.
Demonstrator in Electrochemistry.

J. T. BURT-GERRANS, B.A., Phm.B., 46 Dewson St.
Lecturer in Electrochemistry.

J. B. COGHILL, A.R.C.Sc.I., 118 Bellevue Ave.
Fellow in Chemistry.

J. H. CURZON, 1964 Queen St. E.
Fellow in Surveying.

W. A. DAVIDSON, B.A., 54 Alexander St.
Fellow in Chemistry.

A. R. DUFF, 211 Fern Ave.
Fellow in Chemistry.

F. C. DYER, B.A.Sc., 358 Conduit St.
Demonstrator in Mining.

W. S. FERGUSON, C.A., 52 Tranby Ave.
Lecturer in Accountancy.

J. S. GALBRAITH, B.A.Sc., 57 Prince Arthur Ave.
Demonstrator in Drawing.

W. S. GUEST, B.A.Sc., 30 McMaster Ave.
Lecturer in Electrical Engineering.

R. H. HOPKINS, B.A.Sc., 85 St. George St.
Lecturer in Electrical Engineering.

J. T. HOWARD, B.A.Sc., 137 Madison Ave.
Demonstrator in Drawing.

M. B. JACKSON, B.Sc., 54 Castle Frank Rd.
Lecturer in Mechanical Engineering.

C. W. JEFFERYS, A.R.C.A., Mem. O.S.A., York Mills.
Instructor in Freehand Drawing and Water Colour.

J. T. KING, B.A.Sc., 346 Woodville Ave.
Demonstrator in Mining.

J. T. LAGERGREN, M.E., 148 Carlton St.
Lecturer in Machine Design.

T. R. LOUDON, B.A.Sc., 107 Sheldrake Rd.
Lecturer in Metallurgy.

H. M. LANCASTER, B.A.Sc., 22 Palmerston Gardens.
Lecturer in Sanitary Chemistry.

J. M. LANGSTAFF, C.A., F.I.A., E.A.S., 604 Huron St.
Lecturer in Accountancy.

J. M. LYLE, 14 Leader Lane.
Instructor in Architectural Design.

H. H. MADILL, B.A.Sc., 23 Grange Rd.
Demonstrator in Drawing.

R. J. MARSHALL, B.A.Sc., 148 Quebec Ave.
Demonstrator in Applied Mechanics.

W. H. MARTIN, B.A.Sc., 532 Euclid Ave.
Demonstrator in Drawing.

A. W. MCCONNELL, B.A.Sc.,

P. W. MUELLER, B.A., 96 Warren Rd.
Instructor in German.

W. C. MURDIE, B.A.Sc., 249 McCaul St.
Fellow in Physics.

J. H. PARKIN, B.A.Sc., 43 Brookmount Rd.
Demonstrator in Mechanical Engineering.

J. T. RANSOM, B.A.Sc., 5068 Dundas St.
Demonstrator in Surveying.

L. J. ROGERS, B.A.Sc., 528 Brunswick Ave.
Demonstrator in Chemistry.

L. T. RUTLEDGE, B.A.Sc., 320 Concord Ave.
Demonstrator in Drawing.

F. R. SCANDRETT, B.A.Sc., 329 Mutual St.
Fellow in Surveying.

W. J. SMITHER, B.A.Sc., 42 Carlton St.
Demonstrator in Drawing.

G. E. SQUIRE, B.A.Sc., 80 Gerrard St. E.
Fellow in Drawing.

A. L. STEELE, B.A.Sc., 346 Woodville Ave.
Assistant in Mining Engineering.

R. TAYLOR, B.A.Sc., 373 Roxton Rd.
Demonstrator in Electrical Engineering.

D. J. THOMSON, B.A.Sc., 212 Major St.
Demonstrator in Mechanical Engineering.

G. L. WALLACE, B.A.Sc., 58 Parkway Ave.
Demonstrator in Physics.

F. E. WATSON, B.A.Sc., 447 Manning Ave.
Demonstrator in Drawing.

W. S. WICKENS, B.A.Sc., 89 Kendal Ave.
Fellow in Drawing.

G. K. WILLIAMS, B.A.Sc., 147 Gore Vale Av.
Demonstrator in Drawing.

G. R. WORKMAN, 1 Wood St.
Fellow in Drawing.

A. YOUNG, B.A.Sc., 85 Lappin Ave.
Demonstrator in Applied Mechanics.

A. R. ZIMMER, B.A.Sc., 32 Delaware Ave.
Lecturer in Electrical Engineering.

MEMBERS OF OTHER FACULTIES GIVING INSTRUCTION TO STUDENTS IN APPLIED SCIENCE.

F. B. ALLAN, M.A., PH.D., 380 Brunswick Ave.
Associate Professor of Organic Chemistry.

J. A. AMYOT, M.B., 4 Laburnum Ave.
Professor of Hygiene.

ALFRED BAKER, M.A., 81 Madison Ave.
Professor of Mathematics.

B. A. BENSLEY, B.A., PH.D., 316 Brunswick Ave.
Associate Professor of Zoology.

C. A. CHANT, M.A., PH.D., 201 Madison Ave.
Associate Professor of Astro-Physics.

A. P. COLEMAN, M.A., PH.D., 476 Huron St.
Professor of Geology.

A. T. DELURY, M.A., University of Toronto.
Professor of Mathematics.

J. H. FAULL, B.A., PH.D., 102 Yorkville Ave.
Associate Professor of Botany.

A. G. HUNTSMAN, B.A., M.B., 210 Fern Ave.
Lecturer in Biology.

W. J. LOUDON, B.A., 133 Walmer Rd.
Professor of Mechanics.

M. A. MACKENZIE, M.A., F.I.A., 1 Bellwoods Park.
Associate Professor of Mathematics.

W. L. MILLER, B.A., PH.D., 50 St. Alban St.
Professor of Physical Chemistry.

G. H. NEEDLER, B.A., PH.D., (Leipsic) 103 Bedford Rd.
Assoc. Professor of German.

W. A. PARKS, B.A., PH.D., 69 Albany Ave.
Associate Professor of Geology.

A. L. PARSONS, B.A., 22 Kendal Ave.
Assistant Professor of Mineralogy.

T. L. WALKER, M.A., PH.D., 62 Maple Ave.
Professor of Mineralogy and Petrography.

E. M. WALKER, B.A., M.B., 67 Alcina Ave.
Lecturer in Zoology.

Sessional Appointments.

S. BEATTY, M.A., 22 Alvin Ave.
Lecturer in Mathematics.

J. H. BIRKENSHAW, B.A., 334 Huron St.
Fellow in Mathematics.

H. V. ELLSWORTH, B.A., 64 St. Alban St.

A. C. HAZEN, B.A.,
Fellow in Geology.

A. MACLEAN, B.A., 102 College St.
Lecturer in Geology.

I. R. POUNDER, B.A., 239 Carlton St.
Lecturer in Mathematics.

J. MCQUEEN, B.A., 660 Bathurst St.
Fellow in Mathematics.

J. E. THOMSON, B.A.Sc., 57 Queen's Park.
Demonstrator in Mineralogy.

FACULTY OF APPLIED SCIENCE AND ENGINEERING.

Historical Sketch.

The Legislative Assembly during the Session of 1877 gave its sanction to the establishment of a School of Practical Science on the basis proposed in the memorandum of the Minister of Education confirmed by the Lieutenant-Governor in Council on the 3rd day of February, 1877.

By the scheme thus approved of, Government effected an arrangement with the Council of University College whereby the students of the School of Practical Science enjoyed full advantage of the instruction given by its professors and lecturers in all the departments of science which were embraced in the work of the School.

This arrangement was brought to an end in 1889 by the transfer of the department of science above referred to, from University College to the University of Toronto under the operation of the University Federation Act.

In order that the students of the School might continue to enjoy the advantage of the instruction of the above departments, the Senate of the University of Toronto passed a Statute in October, 1889, affiliating the School to the University, which Statute was confirmed by the Lieutenant-Governor on the 30th day of October, 1889.

By an Order-in-Council, approved by the Lieutenant-Governor, on the 6th day of November, 1889, a Principal was appointed, and the management of the School was entrusted to a council composed of the Principal as chairman, and the Professors, Lecturers and Demonstrators appointed on the Teaching Faculty of the School.

By the terms of this order the management and discipline of the School was vested in the Council.

By a Statute of the Senate of the University of Toronto, passed on December 14th, 1900, the teaching staff and examiners of the School of Practical Science, together with the examiners for the degree of B.A.Sc., and professional degrees in Engineering, were constituted ex-officio the Faculty of Applied Science and Engineering of the University of Toronto.

By an Order-in-Council dated the 30th day of January, 1903, the Council of the School was made to consist of the Principal, the Professors and Lecturers, together with the Registrar.

By the University Act, 1906, the School of Practical Science was united to the University of Toronto as its Faculty of Applied Science and Engineering.

GRADUATING DEPARTMENTS.

There are eight regular Departments of Instruction leading to the degree of Bachelor of Applied Science:—

1. Civil Engineering.
2. Mining Engineering.
3. Mechanical Engineering.
4. Architecture.
5. Analytical and Applied Chemistry.
6. Chemical Engineering.
7. Electrical Engineering.
8. Metallurgical Engineering.

The instruction given in these departments extends over a period of four years and is designed to give the student a thorough knowledge of the scientific principles underlying the practice in the several professions, and also such training as may make him immediately useful when he commences professional work.

DEGREE OF MASTER OF APPLIED SCIENCE (M.A.Sc.).

(For requirements, see page 74.)

PROFESSIONAL DEGREES.

Bachelors of Applied Science may, after three years spent in professional work, present themselves for the degrees of Civil Engineer (C.E.), Mining Engineer (M.E.), Mechanical Engineer (M.E.), Electrical Engineer (E.E.), Chemical Engineer (Chem. E.), as the case may be, subject to the rules and regulations established by the University. (See page 74.)

FELLOWSHIPS.

Fellowships of the value of $500 each, open to graduates, are offered annually in the various departments.

Applications for these fellowships are to be made annually in writing to the Secretary of the Faculty on or before the 1st day of May.

SCHOLARSHIPS.

The Boiler Inspection and Insurance Company of Canada offers a Scholarship in the Department of Mechanical Engineering of the value of $130.00 to the student who obtains highest Honour Standing in the regular examinations of the third year.

The successful candidate will be expected to proceed to his fourth year during the session next following the date of the award.

The amount of the award will be credited by the Bursar to the fees of the fourth year of the successful candidate.

Research Fellowship.

Two research Fellowships of the value of $500 each are offered annually by the Alumni Association of the Faculty of Applied Science and Engineering.

I. MATRICULATION.

1. The matriculation requirements of this Faculty are based upon those given in the curriculum for Junior Matriculation, a copy of which may be obtained on application.

2. A candidate for matriculation must produce satisfactory certificates of good character.

3. The subjects are as follows:

English, History, any three of the following, viz., Greek, Latin, French, German, Experimental Science, with pass standing in Honour Mathematics.

In selecting the options it is recommended that students take French, German and Experimental Science. In the department of Architecture French is required, in Applied Chemistry and Chemical Engineering German is required, and in Mechanical Engineering it is desirable that students take German.

4. The pass standard is forty per cent. of the marks assigned to a paper, with an average of sixty per cent.

5. A candidate who has obtained an average of sixty per cent. on all the papers but has failed to obtain forty per cent. in not more than two papers may complete matriculation by passing on these papers at any one subsequent examination.

6. A candidate who has obtained forty per cent. on each of at least eight papers, with an average of sixty per cent. on the same, will be credited with these papers. In order to complete his Matriculation, he must obtain at one subsequent examination forty per cent. on each of the remaining papers, with an average of sixty per cent.

7. The examination for pass and honour Junior Matriculation is held annually in June at centres in Ontario, and, if application is made to the Senate, the examination may, with the co-operation of the Department of Education, be held at centres outside Ontario.

8. Applications accompanied by the fee of $5.00 must be sent not later than the 15th of May to the local Public School Inspector, or in the case of candidates intending to write at the University, to the Registrar.

9. A Junior Matriculation examination, at which no honour papers are set, will be held in September at the University and at such other centres as may from time to time be authorized. Candidates entitled to the privileges of supplemental examinations, as well as new candidates, may present themselves at this examinations.

10. Applications to write on the September examination, together with the necessary fee, must be received at the Department of Education not

later than September 1, for those who wish to write at any centre established in Ontario, and not later than August 1 for any centre elsewhere in Canada.

11. Forms of application, the time-table of the September examination, and further particulars may be had upon application to the Department of Education.

II. ADMISSION.

A candidate for admission must have completed the seventeenth year of his age on or before the first of October of the year in which he seeks to enter.

Applications for admission must be made on blank forms supplied by the Registrar, and should be forwarded early in September.

Applications will be considered from (*a*) those who have completed matriculation, including those who hold certificates recognized as equivalent—see matriculation curriculum—, (*b*) those who have failed in not more than two papers of the matriculation examination. The latter must complete matriculation before being eligible to enter the second year.

Applications based upon other certificates than those mentioned will be considered as occasion may require. Such certificates must be accompanied by an official statement of the marks in the various subjects upon which the certificate was granted.

ADMISSION AD EUNDEM STATUM.

An undergraduate of another University may be admitted *ad eumden statum* on such conditions as the Senate on the recommendation of the Council of the Faculty may prescribe.

An applicant for admission *ad eundem statum* must submit with his petition (1) a calendar of his University giving a full statement of the courses of instruction; (2) an official certificate of character and academic standing.

III. REGISTRATION.

Registration in the various years will begin Sept. 1st Blank cards for the purpose will be supplied by the Secretary on request. (See "Dues and Deposits," next page.)

IV. FEES.

All fees are payable at the Bursar's office between the hours 10 a.m. and 1 p.m. of each week day except Saturday.

The annual fees including tuition, library, laboratory supplies and one annual examination shall be as follows:

First Year.

If paid in full on or before November 5th..... $100.00

By instalments:

First instalment, if paid on or before November 5th..... 50.00

Second instalment, if paid on or before February 5th..... 55.00

Second Year.

If paid in full on or before November 5th..... $110.00
By instalments:
First instalment, if paid on or before November 5th..... 55.00
Second instalment, if paid on or before February 5th..... 60.00

Third and Fourth Years.

If paid in full on or before November 5th..... $120.00
By instalments:
First instalment, if paid on or before November 5th..... 60.00
Second instalment, if paid on or before February 5th..... 65.00

Repeating the Year.

If paid in full on or before November 5th..... $50.00

The above fees are payable in advance. After November 5th a penalty of $1.00 per month will be imposed until the whole amount is paid. In the case of payment by instalments the same rule as to penalty will apply.

Students desiring to pay in instalments must have paid the fees due in the first term before proceeding to the work of the second term.

General Fees.

Matriculation, or registration of Matriculation..... $5.00
Supplemental examination..... 10.00
Admission *ad eundem statum*..... 10.00
Degree of B.A.Sc. (payable not later than April 1st)..... 10.00

Dues and Deposits.

(Payable to the Secretary of the Faculty at the time of registration.)
Engineering Society membership..... $2.00
Annual deposit..... 2.00

Charges for waste, neglect and breakage are to be met out of the deposit fee, the balance of which will be refunded to the student at the end of the session.

Students' Council Fee.

The Annual Fee..... $1.00

Every male student in attendance, proceeding to the Degree of Bachelor of Applied Science and Engineering, is required to pay to the Bursar, at the time of the entry of his name with the Secretary, the Annual Fee of one dollar, for the maintenance of the Council of the Undergraduates.

GENERAL INFORMATION FOR STUDENTS.

The Council of University College and the governing bodies of the federated universities and colleges, respectively, have disciplinary jurisdiction over and entire responsibility for the conduct of their students in respect of all matters arising or occurring in or upon their respective college buildings and grounds, including residences.

The councils of such of the faculties as have assigned for their separate use any building or buildings and grounds, including residences, have disciplinary jurisdiction over and entire responsibility for the conduct of all students in their respective faculties in respect of all matters arising or occurring in or upon such building, or buildings and grounds.

In all such cases, and, save as aforesaid, as respects all students to whatsoever college or faculty they may belong, disciplinary jurisdiction is vested in the Caput, but the Caput may delegate its authority in any particular case or by any general regulation to the council or other governing body of the university or college or faculty to which the student belongs.

The Caput has also power and authority to determine by general regulations, or otherwise, to what college, faculty or other body the control of university associations belongs.

If there be any questions as to the proper body to exercise jurisdiction in any matter of discipline which may arise, the same shall be determined by the Caput, whose decision shall be final.

Disciplinary jurisdiction includes the power to impose fines.

REGULATIONS RESPECTING STUDENTS.

No student will be enrolled in any year, or be allowed to continue in attendance, whose presence for any cause is deemed by the Council to be prejudicial to the interests of the University.

All interference on the part of any student with the personal liberty of another, by arresting him, or summoning him to appear before any tribunal of students, or otherwise subjecting him to any indignity or personal violence, is forbidden by the Council. In particular, students of all Faculties are warned against the practices known as the "hustling" of freshmen and against inter-year or inter-faculty "hustles". Any student convicted of participation in such proceedings will render himself liable to expulsion from the University.

Any student who may be convicted of having taken part in processions through the city, which have not been authorized by the police authorities after application by the Executive of the Students' Council, will be severely disciplined.

All students shall be in attendance during the whole of each term. Those whose attendance or work is reported as unsatisfactory are liable to dismissal by the Council.

No student will be allowed to repeat the work of any year more than once.

Information as to the text-books, instruments and materials to be purchased by the students will be given on registration at the beginning of the session.

OPTIONS.

In departments 1, 2, 3 and 7 of the first and second years, students have the option of taking either French or German. The selection made for the first year must be continued during the second year.

In Department 1 of the third year, in addition to the regular subjects, Biology will be required of those who intend to follow Sanitary work in the fourth year.

In department 5, second, year, an option is permitted between Biology and Calculus as the student, upon consultation with the head of the department in Chemistry, may decide.

In the fourth year, optional courses are arranged in certain departments. Students are required to submit their selection to the Secretary in writing, not later than September 15th. The proposed selection must be approved by Council before adoption.

REGULATIONS RESPECTING EXAMINATIONS.

Regular Examinations.

A student who in either term of the session fails to perform the work of his course in a manner satisfactory to the professors in charge, will not be allowed to present himself at the final examinations of the year.

Candidates are required to send to the Secretary of the Faculty at least three weeks before the commencement of the annual examinations in April, notice in writing of their intention to take such examinations. A penalty of $1.00 will be imposed upon all candidates who fail to give notice within the proper time.

In the second, third and fourth years annual examinations will be held at the beginning of the second term on all subjects completed during the first term.

No student will be allowed to write at the annual examinations who has not paid all fees and dues for which he is liable.

The minimum percentage of marks required to pass in the written examination will be fixed from time to time by the Council.

The minimum percentage of marks required to pass in the practical work connected with any subject shall be one and one-half times the minimum required in the case of a written examination.

In order to pass the practical examinations in the subjects of applied mechanics, descriptive geometry, electrical design, optics, surveying and architecture, the drawings set in these subjects must be made.

Candidates who fail in passing the annual examinations will be required to take again the whole course of instruction, both theoretical and practical, of the year in which they fail before presenting themselves a second time for examination.

Term Examinations.

In the first year only, term examinations in three subjects will be held on the last two days of the first term.

The subjects will not be announced until the day previous to the first examination.

The results of these examinations will be incorporated with those of the annual examinations in the same subjects in the ratio of 1 to 2.

Supplemental Examinations.

A candidate who fails in one or two subjects at the Annual Examinations will be required to take supplemental examinations in such subjects.

The supplemental written examinations will begin on the 18th of September, 1914. Candidates are required to send to the Secretary of the Faculty not later than the first of September, notice in writing of their intention to take such examinations, and to remit to the Bursar the fee of $10.00

In the case where a candidate fails to pass a supplemental examination it will count as one of the two supplemental examinations which may be allowed him after the next annual examination.

Vacation Work.

Vacation work must be handed in on or before the first day of the session.

Vacation notes must be on construction only, except in Department 2 (see p. 74), and contain not less than twenty, nor more than thirty pages of sketches. These sketches must be freehand pencil drawings with figured dimensions.

Notes must be made in standard note books approved of by the Faculty, Notes which have been taken during the session in connection with the work in drawing will not count as vacation work.

The minimum percentage of marks required for practical work must be made in the case of vacation notes.

Shop Work.

Students in Mechanical and Electrical Engineering are not considered as having completed their course of study, nor are degrees granted until certificates have been submitted to the Council, and accepted as satisfactory, showing not less than eight months of mechanical experience in production of some kind under commercial conditions. Preferably the work undertaken should be in one of the manufacturing industries or trades with which the Course is related.

It is not desirable that any student in these Courses should enter sales or other non-production departments of the engineering industries without having acquired some personal experience in mechanical production. It is best to obtain this experience under commercial conditions. Otherwise one can not at all appreciate shop conditions and limitations.

Honours.

Honours will be granted in each department to the students who pass in all the subjects and obtain at least 66 per cent. of the total number of marks allotted to the department at the annual examinations.

Papers read before the Engineering Society may be considered in granting Honours.

REGULATIONS RESPECTING TERM WORK.

Students working in any laboratory must be governed by the regulations relating thereto as made known from time to time.

No laboratory reports or drawings may be removed from the laboratories without permission. The Council reserves the right to dispose of them as may be thought proper.

Field Work.

No field notes will be counted which have not been taken in the field and during the hours allotted to such work.

Students taking practical astronomy are required to take observations in the field for time, latitude, and azimuth.

Drafting Rooms.

Drawings prescribed for the first term of the session will not be counted unless finished in that term.

The minimum number of drawings in first and second years shall be twenty-five, and the maximum number thirty-five, except in the Department of Analytical and Applied Chemistry, in which the number shall be fifteen and twenty-five respectively.

No drawings will be counted which have not been made in the drafting rooms, and during the hours allotted to such work.

Theses.

In the Fourth Year each student is required to prepare a thesis on a subject approved by the Council. The title of the thesis must be sent to the Secretary of the Faculty for approval on or before November 1st, and the completed thesis must be handed in not later than the first day of the second term and shall become the property of the University. The rules governing size, form, etc., may be obtained on application to the Secretary.

EXEMPTIONS.

Applications for exemption from any of the regulations must be made to the Council in writing and the particulars of the case fully stated.

DEPARTMENT OF CIVIL ENGINEERING.

The courses of study in Civil Engineering are designed to give the student a sound training in the fundamental scientific principles on which the practice of the profession is based. The instruction is given by means of lectures and practical work in the field, the drafting room and the laboratory. In this way the student is led to apply the principles developed in the class room.

2. DEPARTMENT OF MINING ENGINEERING.

The course in Mining Engineering is intended to serve as a preliminary training for those who expect to practise the art of mining or metallurgy. In the first two years it differs very little from the course in civil engineering, in the third year some subjects peculiar to mining and metallurgy are taken up.

In general this course is designed to first give the student a good training in the parts of engineering essential to all branches, such as surveying, drafting, etc., and then in the upper years to allow him to follow studies peculiar to mining engineering.

Candidates for the degree in this department will be required to present satisfactory evidence of having had at least six months' practical experience in work connected with mining, metallurgy or geology, for which they must have received regular wages. Certificate forms, giving full details as to acceptable classes of work, will be furnished on application, and should be obtained by all students before entering employment.

3. DEPARTMENT OF MECHANICAL ENGINEERING.

The course in this Department is designed to meet the needs of those students who are intending to take up the work connected with Mechanical Engineering, such as the design of gas engines, steam engines, steam boilers, steam turbines, air compressors, etc.; the design and installation of the machinery connected with power plants and central stations, steam piping and other similar problems. The work is also so arranged that the student becomes somewhat familiar with the design of travelling cranes and mill buildings and similar problems connected with structural steel work.

Since the work of the mechanical engineer and of the electrical engineer is closely allied, the courses in these two departments in the first two years are identical and cover the subjects mentioned below.

In the third year the work becomes more specialized, the mechanical engineers paying more attention to heat engines of various types, and to mill building design and other work of similar nature. The study of electricity is continued and the student gets considerable practice in the mechanical and electrical laboratories.

In the fourth year the student devotes himself still more closely to his chosen work, placing the greater stress on thermodynamics and the theory and testing of heat engines, and problems in machine design. Much time is spent in the mechanical laboratories testing gas and steam engines and other machines.

Candidates for the degree in this department are required to present satisfactory evidence of having had at least eight months' practical experience in one of the principal trades connected with Mechanical Engineering, the object being that graduates may have some practical knowledge of the duties of the workman in this branch of engineering, as distinguished from those of the purely technical man. Certificate forms will be furnished on application. These forms contain full details in regard to the work required.

4. DEPARTMENT OF ARCHITECTURE

The instruction in this department is arranged to lay a broad foundation for the subsequent professional life of its graduates, and incidentally to prepare its students to be immediately useful in an architect's office. The curriculum has been arranged to meet the aesthetic and scientific needs of the profession, and includes History and Principles of Architecture, Free-hand Drawing in pencil, ink and color, Modelling, Architectural Design, Analysis and Criticism of Buildings, Mathematics, Statics, Strength and Elasticity of Materials, Theory of Construction and Heating and Ventilation.

The equipment of the department includes a working library of 1,000 volumes, a large file of periodicals, 2,500 photographs, 2,000 stereographic photos, 4,500 lantern slides, and a large collection of models and casts.

6. DEPARTMENT OF CHEMICAL ENGINEERING.

In many industries there is a demand for a man who combines the technical knowledge of the mechanical engineer with a knowledge of chemistry. It is to fill this want that the course in Chemical Engineering is designed.

7. DEPARTMENT OF ELECTRICAL ENGINEERING.

The course in Electrical Engineering is arranged to provide preliminary training for those who would follow any of the various lines of activity connected with electrical industry.

The first two years of the course are devoted to fundamental scientific principles, and incidentally more or less of their application to engineering problems in mechanical, civil and electrical work. Many problems are solved in the drafting rooms by graphical methods. The third year includes further theoretical work, more particular attention being given to electrical and mechanical studies in theory, operation and design. The fourth year is devoted to advanced work in alternating current theory and practice combined with similar study in thermodynamics, hydraulics or electrochemistry.

A large amount of laboratory practice is provided, most of which belongs to the third and fourth years. In this last year most of the time is spent in laboratory investigations and studies resulting therefrom.

Candidates for the degree in this department will be required to present satisfactory evidence of having had at least eight months' mechanical experience in one of the principal trades connected with Electrical Engineering, the object being that graduates may have some practical knowledge of the duties of the workman in this branch of engineering as distinguished from those of the purely technical man. Certificate forms will be furnished on application. These forms contain full details in regard to the work required.

OUTLINE OF COURSES OF INSTRUCTION.

APPLIED MECHANICS.

10. STATICS:—*T. R. Loudon.*

Departments 1, 2, 3, 4, 6, 7 and 8, I Year; 2 hours per week; both terms.

This course of lectures deals with forces in a single plane, and concerns chiefly the calculation of tension, compression and shearing stresses in frame structures and solid beams. It also deals with the consideration of problems relating to friction.

11. DYNAMICS:—*J. McGowan.*

Departments 1, 2, 3, 6, 7 and 8, I Year; 2 hours per week; both terms.

This course of lectures deals with bodies having motion of translation in one plane; also with relative motion, momentum, work and energy.

Text book:—Tutorial Dynamics—Briggs and Bryan.

12. DYNAMICS OF ROTATION:—*W. J. Loudon.*

Departments 1, 2, 3, 6, 7 and 8, II Year; 1 hour per week; both terms.

This course covers angular motion, including moments of inertia, simple harmonic motion, the pendulum, centres of mass, suspension and percussion, the simple theory of the fly-wheel and the governor.

Text book:—Dynamics of Rotation—Worthington.

13. STRENGTH OF MATERIALS:—*P. Gillespie.*

Departments 1, 2, 3, 4, 6, 7 and 8, II Year; 2 hours per week; both terms.

In this course the strength and elasticity of materials are mathematically treated. The stresses in such elements of structures as the tie rod, the beam, the strut and the member subjected to shear are investigated and the elementary principles of design established. In the lecture and drafting rooms through numerous problems involving the design of simple beams, columns, riveted connections, etc., these principles are exemplified. The work includes also the discussion of eccentric loading, suddenly applied loads and repeated stresses.

Reference Book:—Mechanics of Materials—Merriman.

14. Strength and Elasticity of Materials:—*J. McGowan.*
Departments 1, 3 and 4, III Year; 1 hour per week; one term.
This course is intended to give the student an introduction to the experimental study of the strength and elasticity of materials. It is intended that he shall acquire some familiarity with the construction and operation of testing machines and with the properties of the ordinary building materials.
Reference Book:—Laboratory Instructions, Department of Applied Mechanics, U. of T., 1913.

16. Theory of Structures:—*J. McGowan.*
Departments 1 and 3, IV Year; 2 hours per week; both terms.
The work taken up in this course of lectures consists in swing bridges, arches, suspension bridges and some special features in column construction. Some examples of the above structures will be designed in the class and carried out in further detail in the drafting room.
Reference Book:—Modern Framed Structures—Johnson.

17. Strength and Elasticity of Materials:—*P. Gillespie.*
Departments 1, 3 and 4, IV Year; a laboratory course of about 11 hours per week.
This course of experiments is intended to give the student practice in investigating the elastic and physical properties of iron, steel, concrete, timber and other building materials.
Reference book:—Materials of Construction—Johnson.

18. Theory of Structures:—*C. R. Young.*
Department 1, III Year; 2 hours per week; both terms.
The work of the first term comprises a thorough discussion of restrained, continuous and trussed beams, multiple beam and box girders, plate girders and certain practical aspects of column design. A number of designs of girders and structural details are worked out in the class and drafting rooms.
The second term is given chiefly to the design of a riveted truss highway span and a riveted truss railway span, the complete designs being made in the lecture and drafting rooms.

19. Theory of Structures:—*C. R. Young.*
Departments 2, 3, 4, 6 and 8, III Year; 2 hours per week; first term.
The work is practically the same as that for Department 1 in the first term except that a building plate girder is designed instead of a plate girder bridge span.
Text books:—Modern Framed Structures—Johnson, Bryan and Turneaure; Theory of Structures—Spofford; Bridge and Structural Design—Thomson; Aids in Structural Design—Young; Carnegie Pocket Companion; Cambria Steel.

20. Foundations, Retaining Walls and Dams:—*P. Gillespie.*
Department 1, IV Year; 1 hour per week; both terms.
This course of lectures is devoted to the design of the structures mentioned. Preparatory to the discussion of the practical aspects of the subjects, and in order to gain familiarity with the fundamental principles involved, a part of the first term is given over to the consideration of the theory of compound stress. The most approved forms of construction of retaining walls, footings, abutments, piers and dams are then described, and typical designs are worked out in the class and drafting rooms.
Text books and books of reference:—Retaining Walls for Earth—M. A. Howe; Walls, Bins and Grain Elevators—M. S. Ketchum; A Treatise on Masonry Construction—I. O. Baker; Design and Construction of Dams—E. Wegmann.

21. Cements and Concrete:—*P. Gillespie.*
Departments 1, 4 and 8, III Year; 1 hour per week; second term.
The manufacture, testing and use of Portland Cement and the elementary theory of reinforced concrete are discussed in this course of lectures.

22. Reinforced Concrete:—*P. Gillespie.*
Departments 1 and 4, IV Year; 1 hour per week.
The theory of the strength of reinforced concrete elements including the beam, the slab, the T-beam and the column, is continued in this course.
The analysis of the monolithic arch by the elastic theory is discussed, and the student is required in the drafting room to apply his knowledge to the design of simple structures.
Reference books:—Principles of Reinforced Concrete Construction—Turneaure and Maurer; Concrete, Plain and Reinforced—Taylor and Thompson.

23. Iron and Steel:—*J. Galbraith, T. R. Loudon.*
Taken by students in IV Year, who select the options (*c*) Structural Engineering, and (*e*) Strength and Elasticity of Materials.
Metallography—Mechanical Treatment, Heat Treatment; Metallurgy; Physical Properties; 1 lecture per week. Laboratory, second term.

24. Mill Building Design:—*C. R. Young.*
Departments 1 (*Structural Engineering Option*), 3 and 4 (*Architectural Engineering Option*), IV Year; 1 hour per week; both terms.

The structural problems involved in the design of mill buildings of timber, steel and reinforced concrete are discussed in this course of lectures. Consideration is given to the various types of buildings, the conditions governing their choice and the details of construction in different materials. Designs of portions of mill buildings are worked out in the class and drafting rooms.

Text books:—Mill Buildings—Tyrrell; Steel Mill Buildings—Ketchum

24*a*. MISCELLANEOUS STRUCTURES:—*C. R. Young.*

Department 1 (*Structural Engineering Option* and *Sanitary nnd Highway Engineering Option*), IV Year; 1 hour per week, second term.

In this course of lectures the application of theoretical principles to the design of a variety of structures is made. Among those structures discussed are transmission line towers, elevated tanks and their supporting towers, standpipes, large pressure pipes, sewers, culverts, small highway bridges, sub-surface tanks and tall chimneys. Whenever possible the lecture work is followed up by designs in the drafting rooms.

MACHINERY.

25. THEORY OF MECHANISM:—*M. B. Jackson.*

Departments 3, 7 and 8, II Year; 2 hours per week; both terms.

This course of lectures treats of the motions of machines, the latter being assumed to be of sufficient strength to resist acting forces. The formation of machines is dealt with in a general way and investigations of the velocities of points and links are made. The design of gear teeth and the application of trains of gears are taken up, also problems in static equilibrium.

Problems are worked out in the drafting room in which the methods given are employed.

Text book:—Theory of Machines—Angus.

26. MECHANICS OF MACHINERY:—*M. B. Jackson.*

Departments 3 and 7, III Year; 1 hour per week; both terms.

In this course the questions dealt with are the construction of acceleration diagrams, the determination of the accelerations of various parts of machines, the kinetic energy of machines, the effect of the weights and accelerations of parts on the velocity of the fly-wheel and the proper weight of the latter to fulfil given conditions. The theory of various forms of governors is also fully taken up and the efficiency of machines. The discussion of the design of slide valves and gears is continued in this course.

Text books:—Slide Valve Gears—Halsey; Theory of Machines—Angus.

27. MACHINE DESIGN:—*J. T. Lagergren.*

Departments 3, 6, 7, III Year; 1 hour per week; both terms.

The lectures in this course deal principally with the applications of the principles of kinematics and the theory of the strength of materials to the design of machine parts, such as shafting, gearing, journals, clutches, etc.

In addition to the lecture course time is spent in the drafting room where designs involving the above principles are worked out and the necessary calculations made. These designs are made as parts of some actual machine, such as an engine.

The laboratory work occupies 7½ hours per week for Department 3, 4½ hours for Department 6, and 3¼ hours for Department 7.

28. MACHINE DESIGN:—*J. T. Lagergren.*

Department 3, IV Year; 4 hours per week.

The lectures and practical work in this course are meant to supplement those of Course 27, and deal with more difficult problems and designs. The design of a complete machine is taken up, and detail drawings as well as an assembly drawing are made.

HYDRAULICS.

29. HYDRAULICS—GENERAL COURSE:—*J. J. Traill.*

Departments 1, 3 and 7, III Year; 2 hours per week.

This is an introductory course of lectures in hydraulics, and is devoted to the development and discussion of fundamental formulas relating to the flow of water in pipes, the measurement of discharge by various methods, such as orifices and weirs, the conditions of flow obtaining in open channels, artificial and natural, and in pipes flowing partially full, together with other kindred subjects.

The object of this course is to provide the student with a good working knowledge of the fundamental principle of hydraulics, such as is useful in practical work, and is necessary to the intelligent investigation of more advanced problems, such as the design of turbines, water-wheels and power plants generally.

29*a*. HYDRAULICS:—*J. J. Traill.*

Departments 2 and 8, III Year; Department 6, IV Year.

This course deals with the development and discussion of fundamental formulas relating to the flow of water in pipes, the measurement of water by various methods, the conditions of flow in open channels and in pipes partly full. This work is followed by a brief discussion on pumps and other hydraulic machines. The last-mentioned part of the course is supplemented by experimental work under the general title "Power".

30. HYDRAULIC LABORATORY:—*J. J. Traill.*

Department 1, III Year; 3 hours per week; one term. Departments 3 and 7, III Year; 3 periods of 3 hours each; first term.

The work in this course is intended to illustrate the lecture course given in Hydraulics and to give the student some working acquaintance with the formulas met with in practice. Experiments are made to determine the coefficients for an orifice and the coefficients of discharge for a weir. The results of these experiments are used in measuring the discharge in subsequent experiments on meters and for the determination of hydraulic resistances in various cases of flow in pipes.

31. HYDRAULICS:—*R. W. Angus, J. J. Traill.*

Departments 1, 3 and 7, IV Year; 3 hours per week; both terms.

Following up the third year course in this subject the theory already acquired is applied to the solution of problems connected with branched pipes, water-mains discharging at various points along their length, the effect of a dam on the water level at any point on a stream and numerous other problems.

The most important question considered and to which most of the lectures are devoted is the theory of turbines and centrifugal pumps, the effect of the design on the speed, discharge, power and efficiency being fully taken up.

Text books:—Hydraulic Motors, etc.—Bodmer; Centrifugal Pumps—Loewenstein and Crissey; Hydraulics—Merriman; Water-Power Engineering—Mead.

32. HYDRAULICS:—*R. W. Angus, J. J. Traill.*

Departments 1, 3 and 7, IV Year; about 10 hours per week.

A laboratory course devoted to experimental work on turbines of various types and centrifugal and turbine pumps and other similar devices. This experimental work is arranged to illustrate the lectures on turbine and pump design. The experiments are made on two large turbine pumps used in the laboratory supply, as well as on apparatus specially designed for instruction. Various methods of measuring water-power and the efficiency of machines are also given.

32*a*. POWER:—*J. J. Traill.*

Departments 2, 6 and 8, IV Year; 24 hours.

A laboratory course of experiments on orifices, weirs, turbines, meters, pumps, etc.

32*b*. HYDRAULICS:—*J. J. Traill.*

Department 1, IV Year.

This is a lecture and laboratory course of six hours per week, first term, dealing with the flow of water in pipes and open channels, measurement of water, and pumps and pumping.

HEAT ENGINES.

33. THERMODYNAMICS:—*R. W. Angus.*

Departments 3, 6 and 7, III Year; about 2 hours per week.

A lecture course in which the subject is treated in such a way as to make it of practical value and give a working acquaintance with the principles on which it is based. After the elementary ideas have been given and the proofs of the properties of Carnot's cycle, applications of the subject are made to the perfect gas and to saturated steam and to the various types of engines. Temperatures are taken from the air thermometer.

34. THERMODYNAMICS:—*R. W. Angus.*

Departments 1, 2 and 8, IV Year; 1 hour per week; both terms.

This course is especially designed to give the student a working knowledge of thermodynamics as applied to the perfect gas so that he will be able to understand clearly the action of air compressors, etc. After deducing general principles, the efficiency of compressed air transmission and the relative merits of different types of compressors are discussed.

35. THERMODYNAMIC AND MECHANICAL LABORATORY:—*L. M. Arkley.*

Department 3, III Year; 2 hours per week, first term; 3 hours per week, second term. Department 7, III Year; 2 hours per week, first term; 1½ hours per week, second term. Department 6; 3 hours per week, second term.

This laboratory course is designed to assist in a clearer understanding of thermodynamics, machine design and mechanics of machinery. The work in thermodynamics consists in the setting of slide valves, indicating engines measuring the brake horse-power, simple engine and boiler tests and the testing of gas and gasoline engines under various conditions. The mechanical laboratory work deals with the efficiency of belts and ropes as well as of several machines of simple construction. An examination of lubricating oils is also made by means of oil testing machines and other well-known devices. Experiments are also made on the balancing of reciprocating and rotating masses.

36. THERMODYNAMICS:—*L. M. Arkley, M. B. Jackson.*
Departments 3 and 7, IV Year; 3 hours per week; both terms.
This is a continuation of the introductory course, the subject being here treated from a general standpoint and the idea of entropy and of the absolute scale of temperatures being introduced. The course includes the treatment of saturated and superheated vapours, gases, the flow of fluids, chimney and boiler efficiency and the theory of various engines and other appliances including air compressors, refrigerating machines, injectors and the various forms of link motions and radial valve gears.
Text books:—Thermodynamics—Peabody; Steam Tables—Peabody.

37. THERMODYNAMICS:—*R. W. Angus, L. M. Arkley, M. B. Jackson.*
Departments 3 and 7, IV Year; about 10 hours per week.
The work in this year is a continuation and extension of the work covered in the third year laboratory course. Careful tests are made of engines of various types, such as simple, tandem and cross-compound steam engines; steam turbines; refrigerating machines; air engines; injectors and steam pumps, etc.; and an application is made of Hirn's Analysis and the entropy diagram to the results obtained. A complete set of experiments is made on each machine and the result plotted so as to show clearly to the student the effect of various alterations in the adjustment of the engine on the resulting efficiency.
Several modern gas and gasoline engines and a gas producer give ample opportunity for the study of this type of engine, and facilities are provided for sampling the gas supply and exhaust.
Two experimental stacks and three boilers enable results to be obtained on boiler efficiency and chimney draft.

38. STEAM ENGINES:—*L. M. Arkley.*
Departments 3, 7 and 8, II Year; one hour per week; one term.
This course of lectures includes a discussion of the principles of action of the steam engine; also the theory and design of various simple forms of valve gears used in the operation of such engines.

39. HEAT ENGINES:—*L. M. Arkley.*
Departments 3 and 7, III Year; Department 8, IV Year; one hour per week, both terms.
This course in heat engines is intended for students in Mechanical, Electrical and Metallurgical Engineering, to be supplementary to the general course of lectures in thermodynamics.
The principal commercial forms of heat engines are dealt with in a more or less descriptive manner; special attention is given to considerations affecting the design of the ordinary forms of steam engines, gas engines and oil engines.

39*a*. POWER:—*L. M. Arkley.*
Departments 1, 2, 6 and 8, IV Year; 21 hours.
A course of experiments with steam and gas engines, compressed air, etc.

ARCHITECTURE.

40. HISTORY OF ARCHITECTURE:—*A. Wellesley McConnell.*
Department 4, I Year; one hour per week; both terms.
In this course the development of architecture is treated very briefly and in an elementary manner, from the Pyramids of Egypt to the present, laying special emphasis on the Egyptian, Grecian and Western Asiatic work. The antique Greek and Roman orders are studied, and the students are required to make rendered drawings in the studio of certain orders and elements. An attempt is made to develop the student's sense of proportion, and in the latter part of the second term he is required to study a simple problem in design.

41. HISTORY OF ARCHITECTURE:—*A. Wellesley McConnell.*
Department 4, II Year; one hour per week; both terms.
The Classical, Early Christian, Byzantine and Romanesque styles of architecture are studied with the aid of the lantern. The student is required to become acquainted with the best examples in these styles in order that his sense of proportion and his taste may be developed and his knowledge of the different elements extended.

42. HISTORY OF ARCHITECTURE:—*A. Wellesley McConnell.*
Department 4, III Year; one hour per week; both terms.
In this course the work of the previous year is continued, with the study of Gothic and the Renaissance.

43. HISTORY OF ORNAMENT:—*A. Wellesley McConnell.*
Department 4, II Year; one hour per week; both terms.
In this course the development of Ornament is traced from the beginning through Egyptian, Assyrian, Grecian, Roman, Byzantine, Romanesque and Moresque styles. An attempt is made to analyze ornament of the best periods and to systematize the principles followed in form and color. The development and types of mouldings are also studied.

44. HISTORY OF ORNAMENT:—*A. Wellesley McConnell.*
Department 4, III Year; one hour per week; both terms.
A continuation of the course in Ornament given to the Second Year. Instruction is given in lectures with the aid of the stereopticon. The students are required to become familiar with the characteristics and forms of the ornament used in the Gothic and Renaissance styles.

45. Orders of Architecture:—*A. Wellesley McConnell.*
Department 4, II Year; one hour per week; both terms.
Lectures on the Five Orders of Architecture, their affiliated forms and the other elements used in design. Simple problems in elementary design involving the use of the orders and other elements are set from time to time.

46. Architectural Design:—*A. Wellesley McConnell.*
Department 4, II Year; one hour per week; both terms.
This course is given by means of individual instruction in the classroom by criticisms of the solutions of different problems set during the year and by a series of lectures. It is in this course that the student begins the serious study of design; continued practice in architectural drawing and rendering affords the training necessary to make the student a proficient draughtsman.

47. Architectural Design:—*A. Wellesley McConnell.*
Department 4, III Year.
Theory and practice of Design.
This course is given by individual instruction in the studio and by lectures. The greater part of the course is devoted to problems in design, and forms a continuation of the course given in the preceding year.

48. Architectural Design:—*A. Wellesley McConnell.*
Department 4, IV Year.
The entire course is devoted to advanced academic training in designing the more monumental classes of buildings. The student is required to design and submit sketches and working drawings of some subject to be selected by himself.

48*a*. Architectural Design:—*A. Wellesley McConnell.*
Department 4, IV Year; Architectural Engineering Option.
A short course of lectures and studio work referring especially to the artistic side of the design of commercial buildings.

49. Freehand Drawing and Water Color Painting:—*C. W. Jefferys.*
Department 4, I Year; 2 hours per week; both terms.
Drawing from still life objects. Primary freehand perspective. Primary pencil and pen and ink rendering.

49*a*. Department 4, II Year; 2 hours per week; both terms.
Drawing and monochrome painting from still life.
Drawing from the cast.
Pencil, pen and ink, and monochrome rendering.
Primary water color.
Drawing from landscape and natural objects.

49*b*. Department 4, III Year; 2 hours per week; both terms.
Drawing from the cast.
Water color from still life. Water color rendering.
Drawing from landscape and natural objects.
Students who are sufficiently advanced are admitted to the Fourth Year Life Drawing Class.

49*c*. Department 4, IV Year; 2 hours per week; both terms.
Water color from still life and from landscape.
Drawing from life.
Water color rendering.

50. MODELLING:—*J. L. Banks.*
Department 4; I Year; 2 hours per week; both terms.
The Orders. Synopsis of styles.

50*a*. Department 4; II Year; 2 hours per week; both terms.
The styles elaborated.
Problems in figures and in relation to architecture.

50*b*. Department 4; III Year; 2 hours per week; both terms.
Styles continued.
Problems, combination of figure, ornament and architecture, and then relative values.

50*c*. Department 4; IV Year; 2 hours per week; both terms.
Modelling from life.
Anatomy.
Composition of groups.

51. STRUCTURAL DESIGN:—*C. R. Young.*
Departments 1 (*Structural Engineering Option*) and 4, IV Year; 1 hour per week; both terms.

This course of lectures is devoted to the problems connected with the structural design of buildings of timber, steel and reinforced concrete. The various structural elements, such as the floors, columns, footings, walls and wind bracing, are fully discussed, and portions of typical buildings are designed in the class and drafting rooms.

Text books:—Architectural Engineering—Freitag; Steel Construction —Tucker; Structural Details—Jacoby; Architects' and Builders' Pocket Book—Kidder.

52. BUILDING MEASUREMENT:—*C. H. C. Wright.*
Department 4, I Year; 1 hour per week; both terms.
In this course of lectures the principles of measurements and mensuration with special reference to buildings will be discussed. With this is combined 4½ hours per week practice in measurements of existing buildings, quantities, etc.

53. BUILDING MATERIALS:—*C. H. C. Wright.*
Department 4, III Year; 2 hours per week; both terms.
The structural and aesthetic value of the various building materials.

54. SANITARY SCIENCE:—*C. H. C. Wright.*
Department 4, IV Year; 1 hour per week; both terms.
Modern plumbing, its design and installation.

54*a*. HEATING AND VENTILATION:—*C. H. C. Wright.*
Department 4, IV Year; 1 hour per week; both terms.
The design of different systems, where they should be used, heating specifications, etc.

ASTRONOMY AND GEODESY.

55. ASTRONOMY, ELEMENTARY:—*C. A. Chant.*
Department 1, II Year; 1 hour per week; both terms.
A course in descriptive Astronomy, explaining the ordinary astronomical terms, and describing the various celestial bodies and their motions. In the evenings opportunity will be given for identifying the stars and for observing with telescopes.
Text book:—New Astronomy—D. P. Todd.

56. ASTRONOMY AND GEODESY:—*L. B. Stewart.*
Department 1, III Year; 2 hours per week.
The course of lectures deals with the determination of time, latitude, longitude and azimuth, by methods adapted to the use of the surveyor's transit and the sextant. It is designed to fulfil the requirements of the final examinations for Ontario and Dominion Land Surveyors.
In Geodesy an account is given of the principles and methods of a secondary triangulation survey, also of the principles involved in the North-West system of survey.
Text book:—Practical Astronomy as applied to Geodesy and Navigation—Doolittle; Nautical Almanac, 1915.

57. FIELD WORK:—*L. B. Stewart, S. R. Crerar.*
Department 1, III Year; about 1 hour per week; first term.
The practical work in this subject comprises observations in the field with the transit and sextant for the determination of time, latitude and azimuth by the methods described in the lectures.

58. ASTRONOMY (Advanced):—*L. B. Stewart.*
Department 1, IV Year; 2 hours per week.
The lecture course in this subject comprises the theory and adjustment of the instruments used in connection with a geodetic survey; the methods of taking and reducing observations for time, longitude, latitude, and azimuth, with the precision required on such a survey; and other matters relating to these subjects.

59. GEODESY AND METROLOGY:—*L. B. Stewart.*
Department 1, IV Year; 2 hours per week.
The lecture course includes a description of the methods of measuring base lines and the angles of a triangulation; the geometry of the spheroid with applications to geodetic problems; the computation of geodetic positions; the solution of large triangles on the earth's surface, and the adjustment of a triangulation; trigonometric and precise spirit levelling; the determination of the figure of the earth by arc measurements, and by the pendulum; the theory of map projections, etc.

60. ASTRONOMY, GEODESY AND METROLOGY:—*L. B. Stewart.*
Department 1, IV Year; about 23 hours per week.
The practical work in the above subjects includes the observation of meridian transits for time and longitude determinations, and of prime vertical transits for latitude, with the astronomical transit instrument; the observation of meridian zenith distances of stars, and of azimuths at elongation for latitude, with the alt-azimuth; theodolite observations for azimuth; observations for latitude with the zenith telescope; the investigation of the constants of the instruments used, and the reduction of all observations; the measurement of a base line with the steel tape and with wires, and the determination of the constants of the tape; the measurement of the angles of a triangulation and the adjustment of the angles of a network of triangles, etc.

BIOLOGY.

61. ELEMENTARY BIOLOGY:—*B. A. Bensley.*
Department 5, I Year; optional in Department 1, III Year; 2 hours per week; both terms.
A course of two lectures a week throughout the session is designed as an introduction to the whole range of biological studies. After a sketch of the scope and objects of these, the lectures will treat (*a*) of the fundamental principles of biology, as illustrated by the simplest animals and plants; (*b*) of typical forms of higher plants in ascending order; (*c*) of typical forms of animals in a similar way; and (*d*) of the structure and functions of the human body.

Students are recommended to make use of the Biological Museum in connection with this course of lectures. For reference: Jeffrey Parker, Elementary Biology; Ramsay Wright, High School Zoology; Atkinson, Elementary Botany; Huxley, Lessons in Elementary Physiology.

62. ELEMENTARY BIOLOGY:—*A. G. Huntsman and J. H. Faull.*
Department 5, I Year; 3 hours per week; both terms.
An elementary course of laboratory work on the general structure and identification of plants and animals, and the use of the microscope in the examination ot tissues and products.

63. ADVANCED BIOLOGY:—*J. H. Faull.*
Department 5, II Year.
A course of instruction on the Morphology and Physiology of Bacteria, Moulds and Yeast Fungi.

63*a*. ADVANCED BIOLOGY:—*J. H. Faull, E. M. Walker.*
Department 1, IV Year.
(*a*) *Botany*:—An elementary lecture and laboratory course of about 3 hours per week, second term, on the economic algæ and fungi.
(*b*) *Zoology*:—Lecture and laboratory course of 4 hours per week, second term, on the morphology, ecology and classification of aquatic animals.

64. BACTERIOLOGY:—*J. A. Amyot.*
Departments 1, 5 and 6, IV Year; a lecture and laboratory course of 8 hours per week, second term, on elementary bacteriology.

BUSINESS.

65. ACCOUNTING:—*W. S. Ferguson.*
All Departments, I Year; 1 hour per week; both terms.
The principles of accounting; illustrated by typical accounts.

66. BANKING AND FINANCE:—*M. A. Mackenzie.*
All Departments, II Year; 1 hour per week; both terms.
Money and the instruments of credit; stocks and bonds.

67. LIMITED COMPANIES:—*J. M. Langstaff.*
All Departments, III Year; 1 hour per week; both terms.
Partnerships; the history and development of the limited liability company; the Companies Acts; Company finance.

68. CONTRACTS AND SPECIFICATIONS:—*C. R. Young.*
Departments 1 and 4, IV Year; 1 hour per week; second term.

This course of lectures deals with the fundamental principles of contract and specification writing. The critical examination of typical specifications and agreements by the class forms an essential feature of the instruction.

Text books:—Engineering Contracts and Specifications—Johnson: Elements of Specification Writing—Kirby; Specifications and Contracts—Wadell-Wait.

69. COST-KEEPING, ETC.:—*J. W. Bain, H. W. Price, L. M. Arkley.*
Departments 2, 3, 5, 6 and 7, IV Year.
Works management, mechanical specifications, analysis of costs, reports.

CHEMISTRY.

75. ELEMENTARY CHEMISTRY:—*J. W. Bain.*
All Departments, I Year; 2 hours per week; both terms.
A lecture course in elementary chemistry dealing with the metals and non-metals, with experimental illustrations.

76. ELEMENTARY CHEMISTRY:—*M. C. Boswell.*
Departments 2 and 6, I Year; 3 hours per week; second term.
A laboratory course to illustrate the use of the sensitive balance, to verify some of the laws which form the basis of the science, and to serve as an introduction to quantitative laboratory methods. Instruction given as required before each period.

77. INORGANIC CHEMISTRY:—*W. H. Ellis.*
Departments 5, 6 and 8, I Year; 1 hour per week; both terms.
A lecture course on the elements and important inorganic compounds, supplementing Course 75.
Text book:—Introduction to General Inorganic Chemistry—Alex. Smith.

78. INORGANIC CHEMISTRY:—*L. J. Rogers.*
Departments 5 and 8, I Year; about 17 hours per week; both terms.
A laboratory course of quantitative experiments illustrating the use of the sensitive balance, and confirming the fundamental laws of chemistry; qualitative inorganic analysis; quantitative analysis of pure salts; inorganic preparations; molar weight determinations.
Text book:—Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

79. INORGANIC CHEMISTRY:—*J. W. Bain.*
Departments 2, 5, 6 and 8, II Year; 1 hour per week; first term.
A lecture course on the chemistry of the metals; a continuation of Course 75.

80. ANALYTICAL CHEMISTRY:—*E. G. R. Ardagh.*
Departments 5 and 8, II Year; Departments 2 and 6, III Year; 1 hour per week: both terms.
A lecture course on the principles of chemical analysis; select gravimetric and volumetric methods; technical analysis.

81. ANALYTICAL CHEMISTRY:—*E. G. R. Ardagh.*
Departments 1, 2, 3 and 7, II Year; 6 hours per week; one term.
Laboratory practice in elementary qualitative and quantitative analysis.
Text book:—A Smaller Chemical Analysis—Newth.

82. ANALYTICAL CHEMISTRY:—*J. W. Bain.*
Department 2, II Year; 3 hours per week; both terms.
A laboratory course in the gravimetric determination of metals and acids, with elementary volumetric analysis.
Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

83. ANALYTICAL CHEMISTRY:—*L. J. Rogers.*
Departments 5 and 8, II Year; 14 hours per week; 17 weeks.
A laboratory course comprising gravimetric and volumetric methods, acidimetry and alkalimetry.
Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

84. ANALYTICAL CHEMISTRY:—*E. G. R. Ardagh.*
Department 6, II Year; 6 hours per week; both terms.
A laboratory course in qualitative and elementary quantitative chemical analysis; inorganic preparations.
Text book:—A Manual of Chemical Analysis, Qualitative and Quantitative—Newth.

85. ENGINEERING CHEMISTRY:—*W. H. Ellis.*
Departments 1, 2, 3, 5, 6, 7 and 8, II Year; 1 hour per week; second term.
A lecture course consisting of a study of the industrial production and application of heat and light, and of the chemistry of fuel and the products of combustion.

86. INDUSTRIAL CHEMISTRY:—*W. H. Ellis.*
Departments 5 and 6, II Year; 1 hour per week; both terms.
A lecture course on the manufacture of salts, acids, alkalies and inorganic chemicals.
Text book:—Inorganic Chemistry—Thorp.

87. ORGANIC CHEMISTRY:—*M. C. Boswell.*
Departments 1, 2, 3 and 7, II Year; 1 hour per week; first term.
A lecture course in elementary organic chemistry.
Text book:—Theoretical Organic Chemistry—Cohen.

88. ORGANIC CHEMISTRY:—*M. C. Boswell.*
Departments 5 and 6, II Year; 2 hours per week; both terms.
A lecture course dealing with the aliphatic compounds.
Text book:—Theoretical Organic Chemistry—Cohen.

89. ORGANIC CHEMISTRY:—*M. C. Boswell.*
Department 5, II Year; 14 hours per week; 7 weeks.
A laboratory course in organic preparations in the aliphatic series.

90. PHYSICAL CHEMISTRY:—*W. L. Miller.*
Departments 5, 6 and 8, II Year; 2 hours per week; both terms.
A course of lectures on the elements of chemical mechanics, and the theory of solutions.

91. ANALYTICAL CHEMISTRY:—*E. G. R. Ardagh.*
Department 5, III Year; 19 hours per week; 16 weeks.
A laboratory course on the technical analysis of iron and steel alloys, ores, furnace products, ceramic materials, foods, gases, fuels, etc.

92. ANALYTICAL CHEMISTRY:—*L. J. Rogers.*
Department 6, III Year; 11 hours per week, first term; 13 hours per week, second term.
A laboratory course in volumetric and technical analysis.

93. ANALYTICAL CHEMISTRY:—*L. J. Rogers.*
Departments 2 and 8, III Year; 5 hours per week; both terms.
A laboratory course on the technical analysis of ores and furnace products.

94. ENGINEERING CHEMISTRY:—*W. H. Ellis.*
Departments 1, 2, 3, 5, 6 and 7, III Year; Department 4, II Year; 1 hour per week; both terms.
A lecture course on the application of chemistry to engineering problems; air, water, sewage, the materials of construction, explosives, etc.

95. INDUSTRIAL CHEMISTRY:—*W. H. Ellis.*
Departments 5 and 6, III Year; 1 hour per week; both terms.
A lecture course on petroleum and its products, coal tar and its products, the destructive distillation of wood; fats, oils, soap, sugar, starch, and gums; fermentation industries, etc.
Text book:—Industrial Chemistry—Thorp.

96. Chemical Plant:—*J. W. Bain.*
Departments 5 and 6, III Year; 1 hour per week; both terms.
A lecture course on the machinery and plant used in chemical manufacturing.

97. Organic Chemistry (A):—*M. C. Boswell.*
Departments 5 and 6, III Year; 2 hours per week; both terms.
A lecture course on the aromatic series.
Text book:—Theoretical Organic Chemistry—Cohen.

98. Organic Chemistry (B):—*F. B. Allan.*
Departments 5 and 6, III Year; 1 hour per week; second term.
A lecture course on stereoisomerism, desmotropism, etc.

99. Organic Chemistry:—*M. C. Boswell.*
Department 5, III Year; 19 hours per week; 8 weeks.
A laboratory course in organic preparations in the aromatic series; organic analysis.

100. Organic Chemistry:—*M. C. Boswell.*
Department 6, III Year; 17 hours per week; 4 weeks.
A laboratory course in organic preparations.

101. Electrochemistry:—*W. L. Miller.*
Departments 5, 6, 7 and 8, III Year; 2 hours per week; first term.
A lecture course on elementary electrochemistry, illustrated by experiments.

102. Electrochemistry:—*W. L. Miller.*
Departments 5, 6, 7 and 8, III Year; 3 hours per week; first term.
A laboratory course in quantitative measurements to accompany Course 101.

103. Inorganic Chemistry:—*J. W. Bain.*
Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on chemical theory.

104. Organic Chemistry:—*M. C. Boswell.*
Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on advanced organic chemistry.

105. Organic Chemistry:—*M. C. Boswell.*
Departments 5 and 6, IV Year.
A laboratory course in advanced organic chemistry.

106. INDUSTRIAL CHEMISTRY:—*W. H. Ellis, J. W. Bain.*
Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on selected subjects in chemical technology.

107. INDUSTRIAL CHEMISTRY:—*W. H. Ellis, J. W. Bain.*
Departments 5 and 6, IV Year; about 28 hours per week; both terms.
A laboratory course in industrial problems.

108. ELECTROCHEMISTRY:—*W. L. Miller.*
Departments 5, 6 and 7, IV Year; 2 hours per week; both terms.
An advanced lecture course on the theory of solutions and electrolysis, and the application to the practice of electro-deposition and electrolytic refining of metals. The course also includes lectures on the electric furnace with special consideration of efficiency.
Text books:—Electrometallurgy—Borchers; Electrochemistry—Le Blanc; Electrochemistry—Luepke.

109. ELECTROCHEMISTRY:—*W. L. Miller.*
Departments 5, 6 and 7, IV Year; about 28 hours per week.
A laboratory course accompanying Course 108.

110. SANITARY AND FORENSIC CHEMISTRY:—*W. H. Ellis.*
Departments 5 and 6, IV Year; 1 hour per week; both terms.
A lecture course on the composition and examination of air, water and food; poisons and their detection.

111. SANITARY AND FORENSIC CHEMISTRY:—*W. H. Ellis.*
Departments 5 and 6, IV Year.
A laboratory course accompanying Course 110.

112. ANALYTICAL CHEMISTRY:—*E. G. R. Ardagh.*
Department 2, IV Year, 12 hours per week; first term.
A laboratory course comprising analysis of ores and furnace products.

113. SANITARY CHEMISTRY:—*H. M. Lancaster, E. G. R. Ardagh.*
Department 1, IV Year.
A lecture and laboratory course of about 16 hours per week for one term on water supply sewage disposal, ventilation, etc.

DESCRIPTIVE GEOMETRY AND DRAWING.

115. DESCRIPTIVE GEOMETRY:—*J. R. Cockburn.*
Departments 1, 2, 3, 6, 7 and 8, I Year; 1 hour per week; both terms.
This course of lectures deals chiefly with the principles of orthographic and oblique projections and the application of such principles to the solutions of problems relating to straight lines and planes.

116. Descriptive Geometry:—*J. R. Cockburn.*
Department 4, I Year; 1 hour per week; both terms.
This course of lectures deals chiefly with the principles of orthographic and oblique projections and the application of such principles to the solution of problems relating to straight lines and planes, special reference being made to the determination of shades and shadows.

117. Drawing:—*J. R. Cockburn.*
Departments 1 and 2, I Year; about 16 hours per week.
Copying from the flat, lettering, topography; graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; the plotting of original surveys; measured drawings.

118. Drawing:—*J. R. Cockburn, A. Wellesley McConnell.*
Department 4, I Year; about 15 hours per week.
Copying from the flat, lettering, topography, freehand drawing in black and white, both from copies and models; the graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; measured drawings. Elements and principles of Architecture.

119. Drawing:—*J. R. Cockburn.*
Department 5, I Year; about 9 hours per week.
Copying from the flat, lettering, measured drawings.

120. Drawing:—*J. R. Cockburn.*
Departments 3, 6, 7 and 8, I Year; about 20 hours per week.
Copying from the flat, lettering, topography; graphical solution of problems in statics; problems in descriptive geometry, relating to both orthographic and oblique projections; measured drawings.

121. Descriptive Geometry:—*J. R. Cockburn.*
Departments 1, 2, 3, 7 and 8, II Year; 1 hour per week; both terms.
This course of lectures is a continuation of the work taken in the first year with the following additions: Problems relating to curved surfaces, principles of shades, shadows and perspective.

122. Descriptive Geometry:—*J. R. Cockburn.*
Department 4, II Year; 1 hour per week; both terms.
This course of lectures is a continuation of the work taken in the First Year with the addition of problems relating to curved surfaces, shades, shadows and perspective.

123. DRAWING:—*J. R. Cockburn.*

Departments 1 and 2, II Year. Department 1, about 14 hours per week. Department 2, about 7 hours per week; both terms.

Coloring and shading as applied to both topographical and construction drawings; problems in descriptive geometry relating to solids bounded by curved surfaces; principles of shades, shadows and perspective; solution of problems in optics and strength of materials; measured drawings; elementary design.

124. DRAWING:—*J. R. Cockburn.*

Departments 3 and 7, II Year; about 15 hours per week; both terms.

Coloring and shading as applied to construction drawings; problems in descriptive geometry relating to solids bounded by curved surfaces; principles of shades, shadows and perspective; solution of problems in optics, theory of mechanism and strength of materials; measured drawings; elementary design.

125. DRAWING:—*J. R. Cockburn, A. Wellesley McConnell.*

Department 4, II Year; about 18 hours per week; both terms.

Freehand drawing including monochrome and colors; exercises from the orders of architecture; principles of shades, shadows and perspective; elementary architectural design; problems in descriptive geometry re ating to solius bound by curved surfaces; solution of problems in optics and strength of materials; measured drawings.

126. DRAWING:—*J. R. Cockburn.*

Department 6, II Year.

Same as Department 3, with exception that theory of mechanism is not included.

127. DESCRIPTIVE GEOMETRY:—*J. R. Cockburn.*

Department 1, III Year; 1 hour per week; one term.

This course of lectures deals with spherical projections, the principles of mapmaking, and the graphical solution of spherical triangles.

128. DRAWING:—*J. R. Cockburn, C. R. Young.*

Department 1, III Year; about 12 hours per week.

Principles of mapmaking, spherical projection, plotting of original surveys relating to topographical and railway work; problems in theory of construction; original design of various structures; measured drawings.

129. DRAWING:—*J. R. Cockburn.*

Department 2, III Year; 4½ hours per week.

Plotting of original surveys, relating to topographical and railway work nd mining; problems in theory of construction; original design; a easured drawings.

m

130. DRAWING:—*J. R. Cockburn, A. Wellesley McConnell, C. R. Young.*
Department 4, III Year; about 16 hours per week, first term; 22 hours per week, second term.
Advanced work in monochrome and colors; problems in shades, shadows and perspective; architectural design; problems in theory of construction, including framed structures.

131. DESCRIPTIVE GEOMETRY:—*J. R. Cockburn.*
Department 4, III Year; 1 hour per week; first term.
Advanced work in shades, shadows and perspective.

132. DRAWING:—*J. R Cockburn, C. R. Young.*
Departments 2, 3 and 6, III Year; 3 hours per week; both terms.
Problems in design dealing with the theory of structures.

ELECTRICITY.

135. MAGNETISM AND ELECTRICITY:—*H. W. Price.*
Departments 3, 5, 6 and 7, I Year; Department 8, II Year; 2 hours per week; first term.
A course of lectures on general principles relating to magnetism, electricity, electromagnetism, electrostatics, etc., illustrated largely from engineering apparatus.
Text book:—Elementary Electricity and Magnetism—S. P. Thompson.

136. ELECTRIC CIRCUITS:—*W. S. Guest.*
Departments 3, 5, 6 and 7, I Year; 2 hours per week; second term.
This course of lectures concerns chiefly fundamental principles relating to electric circuits, and leads to consideration of such problems as the distribution of electric energy through lines and networks and the division of load between generators.
Text book:—Electrical Problems—Hooper and Wells.

137. ELECTRICITY:—*W. S. Guest.*
Departments 3, 5, 6 and 7, I Year; 3 hours, alternate weeks; both terms.
A laboratory course of experiments, given in logical order, designed to demonstrate fundamental principles in connection with the generation and flow of currents in electric circuits. The work is associated with the lecture courses, magnetism and electricity, and electric circuits (135, 136).

138. ELECTRICITY:—*T. R. Rosebrugh.*
Departments 3, 5, 6 and 7, II Year; 2 hours per week; both terms.

Deals with the theory of electrical measurements, and detailed study of various methods applicable under different conditions in engineering practice to the measurement of resistance, current, potential difference, power and energy; calibration of commercial measuring instruments. The effect of choice of conditions of measurement on the accuracy of the result is considered.

Text book:—Electrical Measurements—Carhart and Patterson.

139. ELECTRICAL LABORATORY:—*W. S. Guest.*

Departments 3, 5, 6 and 7, II Year; $2\frac{1}{2}$ hours per week; both terms.

This laboratory course is closely associated with the lecture course 138 on electricity for the second year. The more important and useful methods of testing generators and circuits for electromotive force, resistance, current, grounds, etc., are practised, often under conditions such as occur in practice. The work also includes methods of calibration of measuring instruments for voltage, current, power and energy, and certain studies of properties of incandescent lamps.

140. ELECTRICITY:—*H. W. Price.*

Department 8, II Year; Department 2, III Year; Departments 1 and 4, IV Year; 1 hour per week.

A course designed to fit the requirements of non-electrical students. A study of essential principles is followed by discussion of electrical apparatus plants, power transmission, railways, etc.

Text book:—Elementary Electricity and Magnetism—Jackson.

141. POWER:—*H. W. Price.*

Departments 2, 6 and 8, IV Year; 24 hours.

Under the name "Power" a number of operating experiments are arranged to afford some familiarity with measuring instruments and direct and alternating current machinery.

142. MAGNETISM AND ELECTRICITY:—*T. R. Rosebrugh.*

Departments 3 and 7, III Year; 2 hours per week; both terms.

A course of lectures on theory of magnetism and magnetic circuits, theory of direct current generators, motors, etc.

Text book:—Elements of Electrical Engineering, Vol. I—Franklin and Esty.

143. ALTERNATING CURRENT:—*T. R. Rosebrugh.*

Departments 3 and 7, III Year; 1 hour per week.

A first course of lectures on alternating current, covering principles of measurement and leading to the analytical and graphical treatment of the simpler problems relative to alternating current circuits and machinery.

Text book:—Elements of Electrical Engineering, Vol. II—Franklin and Esty.

144. ELECTRICAL LABORATORY:—*T. R. Rosebrugh, H. W. Price.*
Departments 3 and 7, III Year; 6 hours per week.
This laboratory course is intended to afford the student an opportunity to become familiar with principles involved in continuous current shunt, series and compound wound generators and motors, and, to some extent, alternating current circuits and machinery. Other sections of the work deal with the magnetic properties of iron and steel, and study of iron losses in transformers and generators.
The course is arranged to stand in close relation to the lecture courses in the subjects of magnetism and electricity and alternating current (142, 143) for III Year, and to certain design work (145).

145. ELECTRICAL DESIGN:—*H. W. Price.*
Department 7, III Year; 1 hour per week.
A course of lectures dealing with design of electric machinery and plants, accompanied by designs to be worked out in the design room.
References:—Dynamo-electric Machinery—S. P. Thompson; Electric Machine Design—Parshall and Hobart.

146. ELECTRICAL DESIGN:—*H. W. Price.*
Department 7, III Year.
A design room is set apart for working out designs of electrical apparatus such as transformers, generators, motors, auxiliary apparatus, etc.
Special forms and notes are employed, arranged to suit the various studies. Certain models are provided to assist where necessary.

147. APPLIED ELECTRICITY;—*T. R. Rosebrugh.*
Department 7, IV Year.
This course deals by analytical and vector methods with the theory of alternating current circuits and machinery. Applications of theory are considered with regard to transformers, single and polyphase generators, synchronous motors and rotary converters, induction and commutating series motors, transmission lines, wave analysis, etc.

148. ELECTRICAL LABORATORY;—*T. R. Rosebrugh, H. W. Price, R. H. Hopkins.*
Department 7, IV Year, in connection with 147.

This laboratory course involves a thorough study of principles and properties of single and polyphase circuits and apparatus. Both vector and analytical methods are applied to the solution of problems based on tests made on laboratory machines.

The work deals mainly with constant voltage and constant current transformers, single and polyphase alternators, synchronous motors, rotary converters, induction and single phase commutating motors, transmission line, etc. The work does not consist only of factory tests, but is designed to lead the student to apply theory to practice as illustrated in the apparatus under test, with a view to an exact understanding of methods and an appreciation of limitations under many conditions. Free use is made of the oscillograph as a necessary device for "seeing" conditions under investigation. The best commercial measuring instruments are available.

GEOLOGY.

150. GEOLOGY (Elementary):—*A. P. Coleman.*

Departments 2 and 5, II Year; Department 1, III Year; 1 hour per week; both terms.

This course deals chiefly with historical geology with special reference to Canadian formations.

Reference books:—Introduction to Geology—Scott; Text Book of Geology—Dana.

151. ECONOMIC GEOLOGY. (Including Dynamical and Structural Geology):—*A. P. Coleman.*

Department 2, III Year; 2 hours per week; both terms. Department 1, IV Year.

A study of the more important economic rocks, minerals and ores with their geological associations. Special attention paid to Canadian deposits.

152. ADVANCED GEOLOGY:—*A. P. Coleman.*

Department 2, IV Year.

(A) *Pre-Cambrian Geology.*—An account of the Keewatin, Huronian and Laurentian rocks of Canada, with their distribution, structural relations and economic features, and briefer accounts of similar formations in the United States and elsewhere.

Works of Reference:—Reports of the United States and Canadian Geological Surveys, of the Bureau of Mines of Ontario, etc.

(B) *Pleistocene Geology.*—Lectures on the formation and distribution of the drift deposits of North America, with brief references to other regions. Glacial, Interglacial and Postglacial beds are described, changes of climate are discussed with their probable

causes, and the economic features of the clays, sands and gravels are pointed out. A weekly excursion is made during October and November to points of interest near Toronto, which is the centre of the most important development of Pleistocene in America.

(C) *Physiography.*—A course of lectures on the surface forms of the earth, with the geological factors which have produced them. The broad features of the earth, its plains, tablelands, hills, valleys, mountains, oceans, rivers and lakes are discussed in a general way, methods of topographical surveys and mapping are referred to, and the chief physiographic areas of Canada are described.

153. MINING GEOLOGY:—*A. P. Coleman.*

Department 2, IV Year; 1 hour per week; both terms.

A course of lectures on geological problems associated with mining, typical mining regions in Canada, the United States and elsewhere being discussed from the geological side.

Works of reference:—Mineral Industry and the books mentioned under (A).

154. GEOLOGICAL EXCURSIONS:—*A. P. Coleman.*

Department 2, IV Year.

Trips to points of interest in the vicinity of Toronto.

155. ORE DEPOSITS:—*A. P. Coleman.*

Department 2, III Year; 1 hour per week; both terms.

Discussion of the origin and classification of ore deposits in a general way, the mode of occurrence of the chief metals, and statistics of production, special attention being given to the metals mined in Canada.

156. ECONOMIC GEOLOGY:—*W. A. Parks.*

Department 2, III Year; 1 hour per week; both terms.

Laboratory work on ores, manner of occurrence, vein structure, etc. Geological maps of typical mining regions.

MINERALOGY.

157. ELEMENTARY MINERALOGY:—*J. E. Thomson.*

Department 5, I Year; Department 2, II Year; 2 lectures per week; first term.

After introducing the student to the chief chemical, physical and crystallographic characteristics of minerals, the course becomes descriptive and deals with about one hundred of the minerals most important from the industrial or scientific point of view.

Text books:—Minerals and how to study them—Dana; Text Book of Mineralogy—Dana.

158. MINERALOGY:—*J. E. Thomson.*
Department 5, I Year; 4 hours per week, first term; 3 hours per week, second term.
Introduction to blow-pipe analysis, determination of minerals by inspection and physical tests.
Text books:—Text Book of Mineralogy—Dana; Determinative Mineralogy—Lewis.

159. PRIMARY MINERALOGY:—*A. L. Parsons.*
Department 1, II Year; 2 hours per week; first term.
A very brief introduction to the study of minerals and rocks.
Text books:—Minerals and how to study them—Dana; Handbook of Rocks—Kemp.

160. MINERALOGY:—*A. L. Parsons, J. E. Thomson.*
Department 2, II Year; 1 hour per week, first term; 3 hours per week, second term.
Determination of minerals by inspection and by means of physical tests; introduction to blow-pipe practice.
Text books:—Mineral Tables—Eakle; Determinative Mineralogy—Lewis.

161. MINERALOGY:—*A. L. Parsons, J. E. Thomson.*
Department 1, II Year; 1 hour per week, first term; 2 hours per week, second term.
Determination of minerals by inspection and by means of physical tests; study of common rock types and their identification.
Text books:—Mineral Tables—Eakle; Handbook of Rocks—Kemp.

162. MINERALOGY:—*A. L. Parsons.*
Department 5, II Year; 1 hour per week; second term.
Introduction to the study of rocks; determination of minerals and rocks by means of tables based on the physical properties.
Text books:—Mineral Tables—Eakle; Handbook of Rocks—Kemp.

163. ELEMENTARY PETROGRAPHY:—*T. L. Walker.*
Department 2, III Year; 1 hour per week.
A course of lectures and laboratory work introducing the student to the macroscopic study of rocks.
Text books:—Handbook of Rocks—Kemp; Rocks and rock minerals—Pirsson.

164. MINERALOGY:—*J. E. Thomson.*
Department 2, III Year; 2 hours per week.
Determination of minerals by means of the blow-pipe and physical properties.
Text books:—Mineral Tables—Eakle; Determinative Mineralogy—Lewis.

165. General Petrography:—*T. L. Walker.*
Department 2, IV Year. 1 hour per week.
Study of the chief rock-forming minerals and of some phases of petrography not covered in the course of the previous year.

166. Petrography:—*T. L. Walker.*
Department 2, IV Year; 2 hours per week; both terms.
Study of the chief rock-forming minerals, of rocks in thin sections and in hand specimens.
Text books:—Rocks and Rock Minerals—Pirsson; Minerals in Rock Sections—Luquer.

167. Crystallography:—*A. L. Parsons.*
Department 5, III Year; 1 hour per week.
A course devoted to lectures and practical work on the geometrical and optical properties of crystals, preparing the student for the study of rocks in thin sections and for the examination of crystallized substances, natural and artificial, under the polarizing microscope.

168. Mineralogy:—*J. E. Thomson.*
Department 8, I Year; 1½ hours a week, second term.
Determination of minerals by means of the blow-pipe.
Text Book:—Lewis, Determinative Mineralogy.

169. Mineralogy:—*A. L. Parsons.*
Department 8, II Year; 1 hour per week.
Determination of minerals by physical properties.
Text Book:—Mineral Tables—Eakle.

MINING, ASSAYING AND ORE DRESSING.

170. Mining:—*H. E. T. Haultain.*
Department 2, II Year; 1 hour per week; first term. Department 8, II Year; 1 hour per week; both terms.
An introduction to the study of mining and ore dressing methods.

171. Mining and Ore Dressing:—*H. E. T. Haultain, F. C. Dyer.*
Department 2, II Year; 3 hours per week; second term.
Introductory work with rock-drills and various ore dressing appliances.

172. Mining:—*H. E. T. Haultain, F. C. Dyer.*
Departments 2 and 8, III Year; 1 hour lecture per week, both terms; 3 hours' laboratory work per week, one term.
General mining methods.

173. Assaying:—*H. E. T. Haultain, J. T. King.*
Departments 2, 5 and 6, III Year; 1 hour lecture per week, one term; 3 hours' laboratory work per week, both terms.
Assaying of various ores for gold, silver, lead and copper.

174. Assaying:—*H. E. T. Haultain, J. T. King.*
Department 2, IV Year; 1 hour lecture per week, one term; 3 hours' laboratory work per week, one term.
Continuation of the work of III Year.

175. Mining:—*H. E. T. Haultain.*
Department 2, IV Year; 1 hour lecture per week; both terms.
Special mining methods, examinations, reports.

176. Milling:—*H. E. T. Haultain, F. C. Dyer.*
Department 2, IV Year; 3 hours' laboratory work per week; both terms.
Advanced work with ore dressing appliances, complete mill tests.

177. Ore Dressing:—*H. E. T. Haultain, F. C. Dyer.*
Departments 2 and 8, III Year; 1 hour per week; both terms.

179. Ore Dressing:—*H. E. T. Haultain, F. C. Dyer.*
Department 2, IV Year; 1 hour per week; both terms.

METALLURGY.

180. Metallurgy:—*G. A. Guess.*
Departments 2, 5 and 6, IV Year; 1 hour per week; both terms.
Advanced studies in the metallurgy of gold, silver, copper and lead, etc.

181. Ferro-Metallurgy:—*T. R. Loudon.*
Departments 1, 2, 3, 5, 6, 7 and 8, III Year; 1 hour per week; both terms.
The physical properties of iron and steel and the circumstances that influence the strength, etc., of iron. The different modes of manufacture of iron and steel and the effect of different processes of making on the resulting products; explanations of specifications for iron and steel adopted by engineers.

182. Metallurgy:—*G. A. Guess, W. S. Bishop.*
Department 2, IV Year; 6 hours' laboratory work per week; second term.
Calibration of pyrometers, blast furnace smelting and copper converting, cyanidation, acid leaching of copper ores, electrolytic refining of lead and copper, electrometallurgy.

183. Metallurgy:—*G. A. Guess, W. S. Bishop.*
Departments 2, 5, 6 and 8, II Year; 1 hour per week; one term.
An introduction to the study of general metallurgy.

184. Metallurgy:—*G. A. Guess.*
Departments 2, 5 and 6, III Year; 1 hour per week; both terms.
General metallurgy of gold, silver, lead and copper.

185. Metallurgy:—*W. S. Bishop.*
Department 8, II Year; 1 hour per week, both terms.
A lecture course in the study of metallurgical fuels, their use, preparation, calorific value and temperature of combustion, introduction to the study of metallurgical processes. Problems.
Two hours' laboratory work, second term.

186. Metallurgy:—*G. A. Guess.*
Department 8, III Year; 1 hour per week; first term; 4 hours per week; second term.
The uses, properties and metallurgy of the metals except iron, with special reference to copper, nickel, lead and zinc. The study of clays and their industrial uses. A laboratory course of 100 hours.

186*a*. Metallurgy:—*G. A. Guess, W. S. Bishop.*
Department 8, IV Year; 2 hours per week, both terms, and 9 hours' laboratory work, both terms.
Lixiviation of copper ores, design and organization of plants, metallurgical book-keeping, metallurgical balance sheets, thermal balance sheets, electrometallurgy, electrolytic refining processes, a particular study of Canadian problems.

MATHEMATICS.

187. Algebra:—*A. T. DeLury.*
All Departments, I Year; 2 hours per week; both terms.
Simple equations of one, two and three unknown quantities; quadratic equations of one and two unknown quantities; graphic representation of functions and the introduction of the gradient function; proportion and progressions; interest forms and annuities, permutations, combinations, limits, the general theory of infinite series, binomial theorem, exponential and logarithmic series.
Text book:—Intermediate Algebra—DeLury.

188. ANALYTICAL GEOMETRY:—*J. R. Pounder.*
All Departments, I Year; 1 hour per week; both terms.
The course in Elementary Analytical Geometry covers the more familiar propositions in connection with the straight line, circle, parabola, ellipse and hyperbola. The subject is treated so as to illustrate the general methods of analytical geometry.

189. TRIGONOMETRY, PLANE:—*M. A. Mackenzie.*
All Departments, I Year; 2 hours per week; first term.
Solutions of triangles and practical problems.
Text book:—Practical Trigonometry—Plane and Fawdry.

190. CALCULUS, DIFFERENTIAL AND INTEGRAL:—*S. Beatty.*
Departments 1, 2, 3, 4, 6, 7 and 8, II Year; Department 5, II Year, optional; 2 hours per week; both terms.
This is an elementary course in the infinitesimal calculus, but adequate to afford a knowledge of the character and methods of the subject and to enable students in chemistry, engineering, etc., to understand such of their text books as introduce the calculus.

191. TRIGONOMETRY, SPHERICAL:—*L. B. Stewart.*
Department 1, II Year; 1 hour per week; first term.
A course of lectures includes the derivation of formulæ and their application to the solution of triangles and to practical problems.
Text book:—Spherical Trigonometry—Todhunter and Leatham.

192. LEAST SQUARES, METHOD OF:—*L. B. Stewart.*
Department 1, III Year; 1 hour per week; first term.
The course of lectures includes: The general principles of probability, the law of error, direct measurements of equal and different weights; mean square and probable errors; indirect measurements; conditioned observations; applications to empirical constants and formulæ, etc.
Text book:—Least Squares—Merriman.

TECHNICAL PHYSICS.

195. ACOUSTICS:—*G. R. Anderson.*
Department 4, III Year.
Wave motion, propagation, reflection and transmission of sounds. Laws of vibrating strings, pipes and forks. Velocity of sound. Musical scales. Absorption of sound by various substances, use of deadening material in buildings. Amount of reverberation permissible and desirable in public buildings. Lectures and laboratory work.

196. HYDROSTATICS:—*G. R. Anderson.*
All Departments, II Year.

Laws of fluid pressure and application to machines. Density of solids and fluids, theory of flotation.

Lectures and laboratory work. Spring term.

197. OPTICS:—*G. R. Anderson.*

All Departments, II Year.

Rectilinear propagation of light, illumination, photometry, light standards. Distribution of light by reflectors and diffusers, general and selective absorption, economic values of artificial lights.

Laws of reflection and refraction, theory of optical instruments.

Light considered as wave motion, dispersion, spectrum analysis, colour phenomena, polarization.

Lectures and laboratory work, Fall term.

198. HEAT:—*G. R. Anderson.*

Departments 1 and 5, III Year.

Generation and propagation of heat. General and industrial thermometry, calorimetry and pyrometry. Linear and cubical expansion, gas laws. Specific heat of solids, liquids and gases, latent heat of fusion and vaporization. Mechanical equivalent of heat. Carnot cycle.

Lectures and laboratory work, Fall term.

199. PHOTOGRAPHY:—*G. R. Anderson.*

Departments 1 and 4, III Year; Departments 3 and 7, IV Year.

The camera and its adjustments, lenses, shutters, screens. Plates for various purposes, films, prevention of halation. Lighting, exposure, development. Paper of various kinds, printing, enlargement and reduction, blue printing and allied processes. Record photography, photogrammetry and photo-surveying. Photography in colour.

Lectures Fall term, and laboratory work both terms.

SURVEYING.

205. SURVEYING:—*S. R. Crerar.*

Departments 1 and 2, I Year; 1 hour per week; both terms.

The lecture course includes the general principles; surveying with the chain, the compass and chain and the transit and chain; the applications of trigonometry to inaccessible heights and distances; mensuration of surfaces and solids, co-ordinate surveying, division of land, etc.

Text books:—Land Surveying—Gillespie; Theory and Practice of Surveying—Johnson.

206. FIELD WORK:—*S. R. Crerar.*

Departments 1 and 2, I Year; 9 hours per week; first term.

This course comprises testing chains; practice in chaining; a complete survey of a piece of land with the chain; keeping of field

notes; the use of the compass and transit in surveying closed figures and traverse lines and in ranging straight lines; plotting by latitudes and departures, and otherwise computing areas.

207. SURVEYING:—*W. M. Treadgold.*
Departments 1 and 2, II Year; 1 hour per week; both terms.
This course of lectures takes up in detail, simple, reverse and compound curves as applied to railroad surveying. It also includes stadia, plane table and photographic surveying as applied to topographic work, and also the main features of mine and hydrographic surveying.
Text books:—Henck, Shunk, Searles, Allen (Field books for Engineers) Theory and Practice of Surveying—Johnson; Plane Surveying—Raymond.

208. FIELD WORK:—*W. M. Treadgold, E. W. Banting.*
Departments 1 and 2, II Year; 9 hours per week; first term.
This course of instruction embraces all adjustments of the transit, accurate determination of angles of closed figure, minor problems in triangulation—ordinary and special problems as applied to railroad work in regard to curves, simple, reverse and compound, profile levelling and plotting of profile.

209. SURVEYING AND LEVELLING:—*W. M. Treadgold.*
Departments 1 and 2, III Year; 1 hour per week.
This course of lectures takes up the work of the railroad engineer on construction, including profiles, cross sectioning, computation of volume of earthwork, overhaul, transition curves, laying out turnouts, frogs and switches, etc.
Also a discussion of trigonometric and barometric levelling.
Text books:—Field Engineering—Searles; Railroad Curves and Earthworks—Allen.

210. FIELD WORK:—*W. M. Treadgold, E. W. Banting.*
Departments 1 and 2, III Year; about 9 hours per week; first term.
This includes adjustments of levels and accurate check differential levelling, determination of profile, cross sectioning and computation of earthwork of located line on ground and plotting of same; also cross sectioning by use of hand level. A complete stadia topographic survey is made and plotted.

ADDITIONAL, FOURTH YEAR OPTIONS.

211. RAILWAY ENGINEERING:—*W. M. Treadgold.*
Department 1, IV Year; about 2 hours per week.
The object of this course is to make the student acquainted with the general principles of railroad and street railway engineering, and

the subject will be studied from the standpoint of economic theory of location; train resistance; effect of grade, distance and curvature and rise and fall; maintenance of way; yards and terminals; tunnels, and street railway practice.

212. FIELD WORK:—*W. M. Treadgold.*

Department 1, IV Year; about 11 hours per week; first term.

The work consists of an original survey for a railroad some one or two miles in length, the work being conducted according to the most modern methods of location. Upon the completion of this work a contour map of the district surveyed is plotted in the drafting room and a line adjusted to it. This is staked out in the field, profiles taken and complete estimates of the cost of construction made.

213. SANITARY ENGINEERING.

Sanitary Chemistry (113).

Advanced Biology (63*a*).

Bacteriology (64).

Hydraulics (32*b*).

Sanitary Engineering:—A lecture course of 1 hour per week, both terms, in which consideration is given to the problems of water supply and sewage disposal as viewed by the engineer. Some practice in the design of works from assumed data is afforded.

Reference books:—Sewage Disposal—Kinnicutt, Winslow & Pratt; Sewage Disposal—Fuller; Water Supplies—Turneaure & Russell.

214. HIGHWAY ENGINEERING:—

Department 1, IV Year.

A lecture and laboratory course of about 8 hours per week, dealing with materials, design and construction of highways and pavements and the testing of various materials used in such work.

215. STRUCTURAL ENGINEERING:—

Students in Civil Engineering who desire to specialize in the subjects best fitting them for designing or constructing engineers on bridge-building or other analogous work, may do so by selecting the Structural Engineering Option in the fourth year. In addition to the obligatory subjects, the following lecture and laboratory courses are provided for those selecting this option:

Theory of Structures (16).

Strength and Elasticity of Materials (17).

Iron and Steel (23).

Reinforced Concrete (22).

Structural Design (51).

Mill Building Design (24).

Miscellaneous Structures (24*a*).

216. ARCHITECTURAL ENGINEERING:—

Architectural students desiring to give special attention to the structural design of buildings may do so by electing to take the Architectural Engineering Option in the fourth year. The following subjects, in addition to those required of all students in the fourth year in Architecture, are required:

Structural Design (51).
Mill Building Design (24).
Architectural Design (48*a*).

MODERN LANGUAGES.

217. FRENCH:—*P. Balbaud.*

Required in Department 4, optional in Departments 1, 2, 3 and 7, I and II Years; 1 hour per week; both terms.

An elementary course intended to train the student in the translation of scientific journals and treatises.

218. GERMAN:—*G. H. Needler, P. W. Mueller.*

Required in Departments 5 and 6, all years, optional in Departments 1, 2, 3 and 7, I and II Years; 1 hour per week; both terms.

An elementary course intended to train the student in the translation of scientific journals and treatises.

THESIS.

219. THESIS.

Required in all Departments, IV Year.

Each student is required to prepare a thesis of between six thousand and seven thousand words on a subject approved by Council. See circular of information.

VACATION WORK.

220. CONSTRUCTION NOTES. See special circular of information.

OUTLINE OF VACATION WORK

Construction Notes.

II and III Years.

The construction notes required consist of neat and complete dimensioned sketches in pencil of any structures, machines or plants which may be of interest. Any object chosen should be represented and dimensioned in such a manner that it could be completely constructed from the notes as the only available information.

From students in Department 2, who have been actually engaged during the summer with Government or other approved geological survey parties, geological field notes will be accepted in lieu of construction notes.

MASTER OF APPLIED SCIENCE DEGREE.

1. A candidate for the degree of Master of Applied Science (M.A.Sc.) shall hold the degree of Bachelor of Applied Science (B.A.Sc.) of this University.
2. He shall spend not less than one academic year in attendance as a student, in the Faculty of Applied Science, on a course of study approved by the Council.
3. He shall present a satisfactory thesis on a subject approved by the Council.
4. He shall pass such examinations as the Council may decide.
5. The candidate must register at the beginning of the academic year.

PROFESSIONAL DEGREES.

The attention of graduates is directed to the following regulations respecting professional degrees.

The following degrees have been established: Civil Engineer (C.E.), Mining Engineer (M.E.), Mechanical Engineer (M.E.), Electrical Engineer (E.E.), Chemical Engineer (Chem.E.), subject to the following regulations:

1. A candidate for one of the said degrees shall hold the diploma of the School of Practical Science or of the Faculty of Applied Science and Engineering and the degree of Bachelor of Applied Science except in the case provided for in clause 11 hereunder.
2. He shall have spent at least three years after receiving the degree of Bachelor of Applied Science in the actual practice of the branch of engineering wherein he is a candidate for a degree.
3. Intervals of non-employment or of employment in other branches of engineering shall not be included in the above three years. It shall not be necessary that the several periods requisite to make up the said three years be consecutive.

4. Satisfactory evidence shall be submitted to the University examiners as to the nature and length of the candidate's professional experience for the purpose of clauses 2 and 3.

The Examiners shall satisfy themselves by oral or written examinations in regard to the candidate's experience and competence.

5. The candidate shall prepare an original thesis on some engineering subject in the branch in which he wishes a degree, the said thesis to be accompanied by all necessary descriptions, details, drawings, bills of quantities, specifications and estimates.

The candidate may be required at the option of the Examiners to undergo an examination in the subject of this thesis.

6. Notice in writing shall be sent to the Secretary not later than the first day of February, informing him of the degree to which the candidate wishes to proceed and of the title of his proposed thesis for the approval of the Examiners.

7. The evidence under clause 4, and the thesis, with accompanying papers, described in clause 5, shall be sent to the Secretary not later than the first day of April.

8. The candidate shall be required to present himself for examination in the month of April at such time as may be arranged by the Examiners.

9. The fee for any one of the said degrees shall be twenty dollars, and shall be paid to the Bursar not later than the first day of April.

10. The thesis, drawings, and other papers submitted under clause 7 shall become the property of the University.

11. Candidates who graduated from the School of Practical Science before June, 1905, shall not be required to hold the degree of Bachelor of Applied Science.

EXTRACTS FROM SURVEY ACTS.

From the Ontario Act Respecting Land Surveyors and Survey of Lands (R.S.O.).

"26. Any person serving as an apprentice as hereinbefore provided, may, with the permission of the Board of Examiners, attend the Ontario School of Practical Science, or any school, college or university, the course of study in which is, in the opinion of the Board, sufficiently similar to that in the Ontario School of Practical Science, for the purpose of taking any course of study which includes any subject required for the final examination for admission to practise as a land surveyor, but the total period of such apprenticeship and of course of study shall not exceed the

period of four years from the date of the articles of apprenticeship as above mentioned, and not less than three years of the said period of four years shall be passed in the actual service of a practising Ontario Land Surveyor.

* * * * * * * *

"28. The privilege of a shortened term of apprenticeship shall also be accorded to any graduate of the Royal Military College at Kingston or of the Ontario School of Practical Science in civil engineering or in mining engineering, or of the McGill College, Montreal, in civil engineering or in mining engineering, and such person shall not be required to pass the preliminary examination hereinbefore required for admission to apprenticeship with a land surveyor, but shall only be required to serve under articles with a practising land surveyor duly filed as required by section 32 of this Act, during twelve successive months of actual practice, after which, on complying with all the other requirements, he may undergo the examination prescribed by this Act.

"29. Such person at any time during his apprenticeship may, with the permission of the Board of Examiners, attend the Ontario School of Practical Science, or any school, college or university, the course of study in which is, in the opinion of the Board, sufficiently similar to that in the Ontario School of Practical Science, for the purpose of taking any course of study which includes any subject required for the final examination for admission to practise as a land surveyor, but the total period of such apprenticeship, and of course of study, shall not exceed the period of two years from the date of the articles of apprenticeship as above mentioned, and not less than twelve months of the said period of two years shall be passed in the actual service of a practising Ontario Land Surveyor."

From Act Respecting Manitoba Land Surveyors.

"28. (1) The privilege of a shortened term of apprenticeship shall be accorded to graduates of the Royal Military College of Canada and to graduates in civil engineering of the University of McGill College of Montreal, the School of Practical Science of Toronto, the School of Mining at Kingston, and graduates of Manitoba University who have taken first or second class honours in the special course in mathematics; and such graduates shall not be required to pass the preliminary examination hereinbefore prescribed for admission to apprenticeship with a land surveyor, but shall only be required to serve under articles with a practising land surveyor, duly filed as required by section 24 of this Act, during twelve successive months of actual practice of which at least six months shall be at actual practice in the field, after which, on complying with the other requirements of this Act, he may undergo the examination for commission to practise prescribed by this Act."

From British Columbia Land Surveyors' Act, 1905.

"52. Whosoever shall have followed, during at least two years, a regular course of studies in all the branches of the sciences required by law in order to be received as a land surveyor; who has attended the lectures of a British university or college where a complete course of theoretical and practical instruction is given in civil engineering, physics, and all other branches of sciences required by law in order to be admitted as a land surveyor, and who has received from such university or college, after a regular examination, his diploma or degree of a civil engineer or land surveyor, on satisfying the Board that he is duly qualified as aforesaid, may, without undergoing the examination for admission to the study of land surveying, be received as a student by any member of the Corporation practising in this Province, and shall be bound to perform only twelve months' actual service in the field as such, or, if he has obtained his degree or diploma as a civil engineer or land surveyor in less than two full years, then only such time of service which, added to the time he has devoted to his course of studies, shall complete the period of three full years; and, at the expiration of the said active service, such person, on complying with the other provisions of this section, shall have the right to present himself and undergo the examination required by law, and, if qualified, to be admitted to practise as a land surveyor for the Province as if he had served his three full years under his indentures with a practising land surveyor; but instead of paying fifty dollars he shall be obliged to pay sixty dollars as fees for his examination and commission as land surveyor."

The above section is to be taken collectively as a whole. No separate clause or sentence can be applied to any particular case.

From the Dominion Lands Act, 1908.

"Every graduate in surveying of the Royal Military College of Canada, and every person who has followed a regular course of study in all the branches of education required by this Act for admission as a Dominion land surveyor, for at least two years, in any college or university where a complete course of theoretical and practical instruction in surveying is organized, and who, after examination, has thereupon received from such college or university a diploma or certificate, shall be exempt from serving three years as aforesaid, and shall be entitled to examination for a commission after being admitted upon examination as aforesaid as an articled pupil and serving one year under articles with a Dominion land surveyor, including six months' actual practice with him in the field, on producing an affidavit from the said surveyor in said Form C, together with his own affidavit in said Form D, that he has served for one year as herein provided; but it shall rest with the Board to decide whether the course of instruction in such college or university meets the requirements of this section."

EXTRACT FROM THE ONTARIO ARCHITECTS' ACT.

"Any student who has matriculated in Arts in any university in His Majesty's dominions, or in the Ontario School of Practical Science, shall not be required to pass the preliminary examinations.

"23. Any person who applies for admission to registration as an architect after the coming into force of this Act, shall not be less than twenty-one years of age, shall have served as a student not less than five years with a principal or principals entitled to register under this Act, or with any other principal or principals approved by the Council, and have passed such qualifying examinations as may be required by this Act.

"24. (3) Any person who has graduated from the Ontario School of Practical Science shall be required to serve only three years as a student, one of which three years may be served during the vacation of such school.

"(4) Upon and after the passing of this Act, students shall serve such term as is required to be served by the provisions of this Act, under indenture to a registered architect, which indenture and any assignment thereof with affidavit of execution thereto attached shall be filed with the Registrar upon payment of such fees as the Council may by regulation direct."

LABORATORY EQUIPMENT.

THERMODYNAMIC AND MECHANICAL LABORATORY.

The University in 1909 completed the erection of a large, well-equipped building for the accommodation of the steam, gas, mechanical and hydraulic laboratories A more complete description of the laboratories has been published elsewhere, so that the present description is only intended to give the main features.

The part of the building set apart for thermodynamics and other mechanical work is the ground floor of a room 60 ft. x 155 ft. This room is lighted entirely from the roof in a very perfect way. A part of the space 40 ft. wide running the entire length of 155 feet is served by a 3-ton travelling crane and contains the following equipment:

50 h.p. Brown engine with separate jackets on both heads and barrel of cylinder.

Two-stage Rand air compressor having compound steam cylinders, each fitted with Meyer cut-off gear. The low pressure air cylinder has Corliss inlet gear.

30 h.p. high-speed Leonard tandem compound engine with shaft governor.

15 h.p. high-speed McEwen engine.

75 h.p. two-line compound Willans engine.

15 h.p. DeLaval turbine with special nozzles for condensing and non-condensing tests.

Two 15 h.p. Leonard engines with different types of valves, which are used for valve setting.

There are also two surface condensers with air pumps so arranged that any engine in the laboratory may be made to exhaust into the atmosphere through an open heater or into one of the condensers, the change from one arrangement to the other being accomplished in a few minutes without the aid of valves.

The laboratory further contains:

A 3-ton York refrigerating machine with tanks.

An Amsler transmission dynamometer.

Apparatus for testing injectors and steam pumps.

Numerous other pieces of apparatus and instruments.

The work on internal combustion engines and producers is performed on the following:

18 h.p. Canada suction gas producer.

14 h.p. National gas engine arranged for various compressions and points of ignition.

10 h.p. Fielding and Platt engine for city gas or coal oil, having various adjustments.

8-h.p. Otto gas engine.

6 h.p. marine gasoline engine.

Ericsson air engine.

Various accessories to above machines.

Steam for the laboratory is supplied by two 50 h.p. and one 100 h.p. Babcock and Wilcox boilers, the latter having an internal superheater. These boilers are located in a separate boiler room. They are used for experimental work only and are fitted up for testing. The gases pass up through two independent chimneys, and these have been arranged so that the draft and other conditions in the chimney at any point of its height may be examined.

In smaller work-rooms off the main laboratory are placed belt and oil testing machines, apparatus for testing the efficiency of gears and machines, and for experiments in the balancing of machinery.

HYDRAULIC LABORATORY.

The hydraulic laboratory occupies two floors each 40 feet x 112 feet, which are well lighted by large windows on the side and end.

The water for the experimental work is pumped through the various pieces of apparatus from a well by means of two turbine pumping units, both of which are driven by a Belliss and Morcom compound engine of 125 h.p. running at a speed of 525 revs. per minute. Both engine and pumps have been installed with a view to using them in experimental work as well as for supply of water for other apparatus used in the laboratory.

The pumping units are capable of delivering one cubic foot of water per second against heads of 250 feet and 300 feet respectively. These units are designed and connected up so that they may be run in series giving the above discharge at 550 feet head, or they may be run in parallel giving double the discharge at a lower head. Each pumping unit consists of two two-stage pumps mounted on a common base and driven by a single pulley, and the construction and piping are such that each two-stage pump may be driven separately or that all may be driven at once, discharging separately one cubic foot per second at about 125 feet head through each of four independent pipes, or else the pumps may be run in series or in parallel. The scheme is thus well adapted to laboratory work, and under the heads used on reaction turbines about six cubic feet per second may be obtained.

The laboratory further contains a large vertical steel tank 5½ feet diameter by 34 feet high with arrangements for the attachment of nozzles and other mouthpieces, etc. Connections are also arranged for reaction turbines, the tank acting as a reservoir.

The discharge from the turbines or nozzles is measured in a weir tank nearly 6 feet wide and 21 feet long, containing a contracted weir 4½ feet wide. This weir may be calibrated by two weighing tanks, each having a capacity of about 240 cubic feet.

There are three reaction turbines and two impulse wheels all ready for experiment, the power being measured by brakes and the water by weir or orifices. Amongst the reaction turbines may be mentioned the one designed and built by Escher Wyss & Co., specially for the laboratory.

Smaller orifice and weir tanks, each about 3 x 3 x 12 feet with necessary measuring tanks, are arranged for instruction in coefficients of various kinds and practice with weirs and orifices.

A Venturi meter and other meters, also an hydraulic ram and similar devices are available for testing, and good facilities have been arranged for investigating friction and other properties of pipes and fire hose.

For special investigations on turbine and centrifugal pumps, other pumps in addition to those already described have been arranged.

The basement of the laboratory contains an open trough 5 feet wide, about 110 feet long, with a large weir at one end. It is intended to use this trough for experiments on the flow in open channels, for measurements of large discharges by means of the weir, and for experiments with current meters and Pitot tubes.

Numerous pieces of smaller apparatus, together with all instruments required, have also been provided, and the laboratory equipment is believed to be very complete.

DONATIONS TO THE THERMODYNAMIC AND HYDRAULIC LABORATORIES.

The following donations to the equipment of the laboratories have been made through the kindness of those mentioned:

50 h.p. Wheeler Surface Condenser, presented by Mr. F. M. Wheeler, New York.

Blake Feed Pump, presented by the manufacturers.

6-inch New American Turbine, presented by Wm. Kennedy & Sons, Owen Sound, Ont.

Two Crown Water Meters, presented by the National Meter Co., New York, through Mr. M. Warnock, Toronto.

Rock Drill, presented by Sullivan Machinery Co., New York, through Mr. A. E. Blackwood, '95.

Marine Gasoline Engine, presented by Canadian Fairbanks Co., Montreal.

Two engines with different types of valve, presented by Messrs. E. Leonard & Sons, London, Ont.

Bundy trap from American Radiator Co., through Messrs. Russell & Gifford.

Dunham steam trap from C. A. Dunham Co.

Sectional models of valves from American Radiator Co.

Sectional model Mason Reducing Valve by Russell & Gifford.

Tanks, etc., by John Inglis Co. Pressure Fan from Sheldons Ltd., Galt.

In addition to the above, other firms have materially assisted by offering apparatus at or below cost price, among whom may be specially mentioned, The Canadian Rand Drill Co., Sherbrooke, Quebec.

PHYSICAL LABORATORIES.

The optical laboratory is equipped with Weinhold optical benches and accessories for determining the constants of mirrors and lenses and for demonstrating the construction and use of telescopes, field glasses, microscopes, etc. There is also a full equipment of optical instruments, including telescopes, microscopes, field glasses, comparators, spectrometers, level tester, photometers of various types, focometer, dynamometer, cathetometer, polariscope, projecting lanterns, etc.

The photographic laboratory is supplied with cameras for viewing, copying, enlargement and reduction, a spectroscopic camera and an electric blue printing machine and the necessary dark-rooms.

The hydrostatic laboratory contains a supply of various forms of hydrometers, hydrostatic balances, Jolly balance, Mohr's balance, hydrostatic press, vacuum pumps, gauges, etc.

The heat laboratory is equipped with a full supply of calorimeters and accessories for determinations of latent and specific heat, expansion apparatus, air thermometer, apparatus for verification of Boyle's law and pressure and boiling point curve, and for determination of the absolute expansion of mercury. Callendar's apparatus for determination of the mechanical equivalent of heat.

The acoustical laboratory is provided with sonometer, siren, forks ordinary and electric, Lissajous' and Melde's apparatus, organ pipes of various forms, manometric flame apparatus and a special equipment for work in architectural acoustics consisting of torsion chronograph, electropneumatic wind chest and standardized organ pipes and other accessories.

ELECTRICAL LABORATORIES.

Galvanometer laboratory.—The equipment of this laboratory is, in part, as follows: A set of D'Arsonval galvanometers conveniently located at tables about the laboratory, a set of resistance boxes for use w th the same; measuring instruments, including ammeters, voltmeters, wattmeters, potentiometers and standard cells. Apparatus for the measurement of low resistance, including a ductor, and for high resistance, including a megger; several Carey Foster outfits and a Roller bond tester. There are also experimental lines for practice in locating faults, photometer outfits with rotating devices and various types of arc lamps.

Another room is fitted more especially for calibration of electrical instruments for alternating and direct currents. About one hundred and twenty portable measuring instruments are available for students' use, also standard instruments, including Weston laboratory standards, Kelvin balances and a Wolff potentiometer, with which the portable instruments may be compared.

Machine laboratory.—This laboratory, occupying two large rooms, contains twenty-five dynamos and motors varying in capacity from two to twenty kilowatts, adapted for experiments illustrating the properties of compound, shunt and series dynamos and motors, arc machines, as well as the use of interpoles. Switch-boards, numerous rheostats, lamp racks, starting boxes, circuit breakers, flexible cables, brakes, torsion dynamometers, tachometers, etc., are available for use with the machines.

This laboratory also contains two 15 kw., 25 cycle and two special 15 kw., 60 cycle General Electric polyphase revolving field alternators direct driven by motors, two 7½ kw. alternators, two rotary converters of 10 kw. and 5 kw. capacity, a 7½ kw. General Electric polyphase induction motor with slip ring rotor, Westinghouse three-phase squirrel cage induction motors, Wagner single phase motor and unity power factor motor, Swedish General Electric variable speed motor, Westinghouse single phase series motor, Westinghouse alternator, and several three phase and single phase induction motors; also transformers, reactive coils, and other details, as in the direct current sections of the laboratory described above, for experiments on the properties of alternating currents and alternating current apparatus in general. A constant-current transformer with its load of six series arc lamps, a three-element oscillograph, for studying wave forms, a high potential transformer and a mercury arc rectifier may also be mentioned. The students are supplied with Weston, Westinghouse and Thomson portable instruments for measuring purposes.

A motor generator set has been installed, comprising a 65 h.p. motor driving on the same shaft a 30 kw. 110 volt d.c. generator and a 30 kw. 60 cycle 110 volt alternator with direct connected enciter.

Magnetic laboratory.—A room is fitted with appliances for the study of saturation and hysteretic properties of samples of iron and steel, as well as a transformer for determining dielectric strength. The room also serves for exercise in winding models of armatures.

CHEMICAL LABORATORIES.

The Chemical laboratories are situated in the western half of the Chemistry and Mining building, on the first and second floors. The rooms are large and well lighted, and are supplied with the usual modern equipment.

The first and second year laboratory for qualitative work has accommodation for 112 students, each working space being supplied with water, gas and fume cupboard. The laboratory for quantitative analysis will accommodate 48 students, and is supplied with commodious fume cupboards and all necessary apparatus. A laboratory with working places for 36 is provided for the students engaged in the study of technical chemistry; it is equipped with appliances for the preparation and testing of chemical products. A laboratory for fourth year students with accommodation for eight workers has been fitted up. Each of these laboratories has its own balance room adjoining furnished with instruments from the best makers and adapted to the particular objects in view.

In addition there are rooms set apart for gas analysis, electrolytic analysis and a specially constructed fireproof laboratory for combustion, crucible and bomb furnaces. A calorimeter room has been equipped in the basement. Each of these laboratories is supplied with apparatus of the most approved design, providing excellent facilities for the prosecution of work in analytical and technical chemistry.

ELECTROCHEMICAL LABORATORIES.

The Electrochemical laboratories, which are situated in the Chemistry and Mining building, are provided with special facilities for electrolytic work, including a large storage battery and electroplating dynamo with tanks as well as a complete set of apparatus and electrical measuring instruments. The experimental work on electric furnaces is performed in two rooms specially equipped for this purpose with rheostats and switchboard connections to a 120 kw. d.c. generator which supplies the current required.

ASSAYING LABORATORIES.

Two assaying laboratories are situated in the basement of the Chemistry and Mining building. One has a floor space of 17 feet x 47 feet, and the other 28 feet x 37 feet. Adjoining each is a room 15 feet x 11 feet, with the necessary equipment for the wet work in connection with assaying. Common to both laboratories is a balance room furnished with gold balances set on a concrete pier. Each of the laboratories contains a number of

melting holes for crucible fusions, various gas furnaces both for crucibles and muffles, and two large brick muffle furnaces.

The furniture comprises lockers for the students, tables for the pulp balances and the necessary cabinets and shelving.

Adjoining the assay laboratories is a preparation room (19 feet x 13 feet) which is equipped with a motor, crusher, pulverizer, sample grinder and all the necessary hand pulverizers, screens, etc., for preparing ores for assay.

METALLURGICAL LABORATORY.

This laboratory is located on the basement floor of the Mining Building. The main room has a floor space of 1,600 square feet. The equipment consists of: Two copper blast furnaces, acid lined copper converter, an American Gas Company muffle roasting furnace, a Hoskins resistance furnace for high temperature work, an Abbey ball mill, tanks for electrolytic refining and precipitation, together with several small furnaces of various types. Facilities for testing coal, pyrometric work, flue gas analysis are also provided.

There is also a laboratory with a floor space of 900 square feet for the testing of clays. The equipment, part of which is in the main Metallurgical laboratory, consists of: A large revelation kiln, down draft gas fired kiln and muffle kiln, dry pressed brick press, tile and hollow ware press. There is a large ore and apparatus storeroom and locker room with shower bath for students.

MILLING AND CONCENTRATING LABORATORY.

A detached building, 72 feet x 70 feet in area, contains the milling and concentrating equipment. It is heated, lighted and supplied with power from the main building, and is divided into two parts. The greater part, with 72 feet x 53 feet floor space, and 22 feet high, contains the milling and concentrating equipment. The machinery for the former operations consists of a five-stamp battery erected on concrete foundations, Challenge ore feeder, amalgamating plates, Wilfley table, a clean-up pan, steel settling tanks, a steel tank suspended from the roof girders to furnish a constant supply of water, and a track with travelling crawl to transport ore. This is driven by a 15-horsepower motor.

The concentrating part consists of a set of five revolving trommels for wet screenings, four three-compartment jigs, a trough classifier delivering three products, and two revolving buddles, Wilfley Slimer, Deister Slimer, Richard's Pulsating Classifier, Richard's Pulsating Jig, a dry sizer, besides experimental apparatus of various kinds for experimenting on the falling rates of ore particles, the settling of slimes, surface tension action in grease and flotation methods, etc. The waste products run to the same settling tanks as the tailings from the stamp battery. The ore is handled by a travelling crawl. All the machinery in this part is driven by a 10-horsepower motor.

The lower floor has been fitted up for lixiviation work with apparatus for the treatment of sands and slimes, different types of filter press, vacuum plant agitators, etc.

The plant throughout is intended mainly for experimental purposes and is made of such a size that numerous experiments can be carried out on small quantities of ore. Tests can also be made on lots of one or two tons.

The other part of the milling building with 72 feet x 17 feet floor space and 15 feet high is divided into four separate rooms. The largest of the four rooms has an area of 476 square feet and is devoted to the crushing and pulverizing of the ores preparatory to their treatment in the milling and concentrating room. It is isolated in order to confine the dusty operations as far as possible to this one room, and is equipped with a gyrating crusher of Hadfield's make, a set of Hamilton rolls 16 inches by 12 inches, platform scales for weighing ore, a jib crane, pulleys, buckets, etc., for handling the rock. An adjoining room contains a 30 h.p. motor for driving the machinery of the crushing department, and storage bins for ore, work bench, etc. Another room with 17 feet x 15 feet floor space is furnished with a magnetic separator of the Rowan-Wetherill type, driven by its own motor.

STRENGTH OF MATERIALS LABORATORY.

This laboratory is intended for the scientific and commercial testing of materials of construction such as iron, steel, timber, concrete and masonry.

It is supplied with the following:

An Emery 50-ton hydraulic machine, built by Wm. Sellers & Co., of Philadelphia, for making tests in tension and compression.

A 100-ton screw power machine, built by Riehle Bros., Philadelphia. It is designed for making tests in tension, compression, shearing and cross-breaking, and will take in posts 12 feet long and beams up to 18 feet in length.

A Riehle 10-ton screw power universal testing machine.

A Riehle 50-ton screw power universal testing machine.

A 15-ton single lever-machine, built by J. Buckton & Co., Leeds, England.

A torsion machine, built by Tinius Olsen & Co., Philadelphia, for testing the strength and elasticity of shafting. This machine will twist shafts up to 16 feet in length and 2 inches in diameter.

A hand power torsion machine of simple mechanical construction, specially designed for the testing of short shafts of a maximum diameter of one inch.

A Riehle transverse testing machine of 5,000 pounds capacity, adapted to specimens up to 48 inches in length.

A Riehle compressometer, with spherical seat attachment for the adjustment of specimens having slightly non-parallel faces. This compressometer will receive specimens up to 10 inches in length.

An Olsen compression micrometer of standard type.

A 20,000 pound Olsen, hand power, wire testing machine, specially fitted for testing wooden columns with both fixed and pivoted ends.

A Riehle abrasion cylinder, built to the standard required by the National Brickmakers' Association, adopted in 1901.

A Page Impact Machine for testing the toughness of road metals.

A diamond core-drill for preparing specimens for the Page impact machine.

A two-cylinder Deval abrasion machine for testing the wear-resisting properties of road materials.

A Berry strain-gauge for spans of 3 inches and 8 inches.

A Nalder dividing engine. This may be used either for the precise division of scales or for the calibration of instruments intended for refined measurements.

A large number of extensometers of the usual degree of precision. These include the Bauschinger, Martens, Unwin, Ames, Riehle, Johnson, Henning (recording) and other types. In addition there are the usual scales, micrometers, telescopes and reflectors, voltmeters for the determination of metallic contact, and such other appliances as are necessary in the making of precise measurements.

The shop is equipped with a number of high-class machine tools specially fitted for reducing the specimens to the requisite shapes and dimensions with a minimum of hand labour. It is also supplied with the necessary appliances for making ordinary repairs and for making apparatus for special experiment and original investigation.

CEMENT TESTING LABORATORY.

This laboratory is fitted with all the ordinary moulds, sieves, balances, burettes, steaming and drying tanks, tables, and other appliances necessary in making the usual physical tests of a Portland cement. It is also supplied with completely equipped cabinets for individual work. In addition there are the following:

A Riehle 2,000 lb. machine fitted for either tension or compression.

A 2,000 lb. Riehle shot machine for tension.

A 2,000 lb. Fairbanks shot machine for tension.

A 1,000 lb. Olsen automatic shot machine fitted for tests in either tension or cross breaking.

An Olsen soapstone moist closet of modern design.

METROLOGICAL LABORATORY.

The department of surveying and geodesy is provided with all the ordinary field instruments, such as transits, levels, compasses, micrometers, sextants, planimeters, plane tables, tapes, chains, etc., with which is carried on the instruction in practical field operations as detailed elsewhere.

A small laboratory is also established in the basement of the observatory described below, containin the necessary instruments for the refined measurements of geodetic su veying; s, a standard yard and metre, a Rogers 10-foot comparator, an invar base measuring apparatus, a Kater's pendulum with vacuum chamber, a level trier, micrometer microscopes, etc.

The geodetic observatory in connection with this department is used for the instruction of students of the Fourth Year in taking observations for time, latitude, longitude, and azimuth by the precise methods used in connection with a geodetic survey. It contains a 10-inch theodolite and zenith telescope by Troughton & Simms; an astronomical transit instrument and an 8-inch theodolite by Cooke; two electro-chronographs; a Howard astronomical clock; a Dent sidereal break-circuit chronometer; arithmometers, etc.

GEOLOGICAL AND MINERALOGICAL LABORATORIES.

In the Chemistry and Mining building on College Street the University possesses a modern laboratory for Geology and Mineralogy.

Courses are given in laboratory work, especially in personal examination of type sets of rocks, fossils, minerals and crystal models. These laboratory exercises serve to illustrate the introductory didactic instruction.

For the encouragement of pure crystallography the laboratories are supplied with goniometers of the various types, crystal models, appliances for the cutting of oriental crystal sections and for the physical examination of the same. Practical petrography is carried on in rooms provided with type sets of rocks, both macroscopic and microscopic. Advanced students are taught to make thin sections of rocks and fossils and to study them microscopically. For students in Mining a laboratory course in the interpretation of geological maps and sections is provided. Typical mining regions are studied in detail and an opportunity is afforded for the examination of specimens illustrating economic geology.

The laboratory for the preparation of thin sections of rocks, minerals and fossils is provided with electric diamond saws and grinding appliances for the various types of work incidental to the preparation of thin sections and museum material.

A room is also provided for advanced work in cartography and geological surveying.

The departments possess 28 petrological microscopes and 5 of other types, so that it is now possible to provide advanced students with instruments and sets of thin sections for their own especial use. The blowpipe laboratory contains 156 lockers, especially designed for apparatus for students.

MUSEUM.

The Geological and Mineralogical Museum of the University is open to students of the Faculty of Applied Science from 9 a.m. to 5 p.m. throughout the year.

The Museum is situated in the south-east corner of the ground floor of the Chemistry and Mining building.

The collections are restricted to such material as may serve to illustrate the courses of lectures given to undergraduate students in the Faculty of Applied Science. There are accordingly contained in this museum only the commoner rocks, minerals, fossils and ores.

LIBRARY.

Rooms have been set apart in the Engineering and the Chemistry and Mining buildings for the housing of such periodicals and other literature of the University Library as is of special interest to the students of this faculty.

SOCIETIES.

THE ENGINEERING SOCIETY OF THE UNIVERSITY OF TORONTO.

Officers for 1913-1914.

President.....F. C. Mechlin.
1st Vice-President.....F. S. Rutherford.
Vice-Pres. Civil & Archl. Secs.....R. E. Laidlaw.
" *Mechanical & Elec. Secs*.....K. A. Jefferson.
" *Chemistry & Mining Secs*.....L. T. Higgins.
Recording Secretary.....L. L. Youell.
Corresponding Secretary.....A. W. Sime.
Treasurer.....W. G. Millar.
Permanent Secretary.....J. E. Ritchie.
Curator.....H. A. Babcock.
Fourth Year Representative.....R. G. Matthews.
Third Year Representative.....W. R. McGie.
Second Year Representative.....H. B. Little.
First Year Representative.....A. A. Tufford.
Senior "Varsity" Representative.....J. G. Mullins.
Junior " " .....J. F. Young.

The Society meets every second Wednesday during the academic year. Papers are read, and discussions are held on engineering subjects. The Society publishes a journal monthly during the year, containing the best papers read at the meetings. A supply department is conducted by the Society, on a co-operative plan, through which instruments, drafting supplies, stationery, etc., may be purchased at a low cost.

UNIVERSITY OF TORONTO ELECTRICAL CLUB, 1913-1914.

President.....A. S. Robertson.
Vice-President.....E. M. Monteith.
Secretary-Treasurer.....E. D. W. Courtice.
Councillors.....J. D. Peart.
A. G. Ironside.
W. R. McGie.

The Society meets every second Thursday evening during the academic year for the discussion of papers relating to mechanical and electrical engineering problems too technical for consideration in the Engineerin oc ety. The membership is limited to members of the senior and final years.

THE INDUSTRIAL CHEMICAL CLUB OF THE FACULTY OF APPLIED SCIENCE.

Officers for 1913-1914.

Honorary President.....Dr. Ellis.
Honorary Vice-President.....Prof. J. W. Bain.
President.....W. E. Phillips.
Vice-President.....W. Uffelmann.
Curator.....J. McLean.
Secretary-Treasurer.....C. C. Anderson.
Fourth Year Representative.....O. G. Lye.
Third Year Representative.....L. G. Glass.

The Industrial Chemical Club was organized in 1909 and consists of graduates and undergraduates of Departments 5 and 6. Its object is to promote the study of industrial chemistry and chemical engineering. Illustrated lectures preceded by an informal dinner and short musical program, are held fortnightly, and on the following day an excursion is made to one or other of the industrial chemical concerns located in the city or vicinity.

UNIVERSITY OF TORONTO ARCHITECTURAL CLUB, 1913-1914.

Honorary President.....John M. Lyle.
President.....W. C. Skinner.
Vice-President.....J. M. Robertson.
Secretary.....F. Marani.
Treasurer.....M. Denison.
Councillors.....H. J. Burden.
F. A. Swinnerton.
F. R. Gibson.

ATHLETIC ASSOCIATION OF THE FACULTY OF APPLIED SCIENCE.

EXECUTIVE COMMITTEE, 1913-1914.

Honorary President.....Prof. C.H.C.Wright.
President.....E. B. O'Connor.
Vice-President.....D. B. Gardner.
Secretary-Treasurer.....C. W. Pennington.
Fourth Year Representative.....H. W. Wagner.
Third Year Representative.....L. S. Adlard.
Second Year Representative.....R. W. Downey.
First Year Representative.....G. A. Webb.

The Athletic Association has full control over all athletic clubs using the name of the Faculty of Applied Science. The Executive Committee has power to suspend any one from the privileges of membership in the Association for any breach of its regulations, and controls the finances of all athletic clubs in the aforesaid Faculty. The annual membership fee of this Association is fifty cents.

No other moneys are collected for the support of athletics in the Faculty of Applied Science without the sanction of the Executive Committee.

RUGBY FOOTBALL.

The Mulock Cup, which was presented by Sir Wm. Mulock, M.A., LL.D., to the University of Toronto Rugby Football Club for inter-college competition, brings out each year a large number of contestants from the University and affiliated colleges.

RUGBY FOOTBALL CLUB OF THE FACULTY OF APPLIED SCIENCE.

Officers for 1913-1914.

Honorary President.....T. R. Loudon.
President.....I. R. Strome.
Manager senior team.....J. P. Cavers.
Captain senior team.....H. W. Wagner.
Manager junior team.....W. W. Ritchie.
Captain junior team.....C. Smythe.

ASSOCIATION FOOTBALL.

In order to encourage Association Football on the College campus, the Faculty of the University of Toronto presented a cup, known as the Faculty Cup, to the Inter-College Association Football Club for annual competition among University and affiliated colleges.

ASSOCIATION FOOTBALL CLUB OF THE FACULTY OF APPLIED SCIENCE.

(Winners of Faculty Cup.)

Officers for 1913-1914.

The Structural Club was organized in November, 1913. The membership is composed of Fourth Year Civil Engineering students taking the Structural Engineering option. The object of the Club is to study the broader aspects of Structural Engineering. Meetings are held semi-monthly, which are addressed by prominent engineers. The addresses are invariably followed by lively and instructive discussions. Another phase of the Club's activity is the conducting of trips of inspection to engineering works in the city.

FACULTY OF APPLIED SCIENCE.
YOUNG MEN'S CHRISTIAN ASSOCIATION.

The Y.M.C.A. of the Faculty of Applied Science was organized January 27th, 1905, and forms an integral part of the University of Toronto Y. M. C. A., which is a Federation of the associations of the various Colleges and Faculties of the University. The object of the Association is to develop a true Christian manhood and to help the students in whatever way possible.

Honorary President.....Prof. J. W. Bain, B.A.Sc.
President.....S. Shupe.
Treasurer.....Porter.
Recording Secretary.....W. A. Smelser.

LODGING AND BOARD.

Accommodation is readily obtainable in numerous private boarding-houses within convenient distance of the University, at a cost of from four dollars and a half a week upwards for comfortable lodging with board; or rooms may be rented at a cost from one dollar and a half per week upwards, and board obtained separately at moderate rates. A list of accredited boarding-houses is kept by the Secretary of the University Young Men's Christian Association, and students are recommended to consult him with reference to the selection of suitable accommodation.

UNIVERSITY RESIDENCES.

By the generosity of Mr. and Mrs. E. C. Whitney and other friends, the University can now offer to some hundred and fifty men the peculiar advantages of residential life and excellent accommodation within its own grounds. The Residence, opened in November, 1908, consists of three Houses situated on the north side of Hoskin Avenue, opening upon a quadrangle, the fourth side of which is formed by Devonshire Place. They stand about two hundred yards to the north of University College and of the University Dining Hall and close to the University Gymnasium and Athletic Field. The buildings are known as the South, East and North Houses.

Each House contains twenty-four single rooms, one single suite, one double room and eleven suites, a suite comprising a study and two bedrooms. A large room in each building, with an open hearth and a library has been set aside as a common room. A lavatory with hot and cold shower baths is provided for every eight men. The buildings are heated by steam and lighted by electricity.

The University supplies the table, chairs, book-case, chiffonier, bed, mattress, pillows, linen and window shades for each room; it is prepared to furnish a drop-light for a nominal rental.

Each occupant is charged $2.50 room-rent per week, payable to the Bursar four weeks in advance. The charge for each single suite is $3.50 per week. These charges cover heat, light, house-service, house-laundry, and the use of the telephone. There is no separate dining hall connected with the Residence, but board may be obtained at the adjacent University Dining Hall for $3.25 per week.

Applications for rooms must be made in writing to the Secretary of the Residence Committee (address the Registrar's Office) and must be accompanied by a deposit of $5.00. This deposit will be returned if the application be not granted, and will be forfeited if a room is assigned to the applicant and not taken by him, unless notice of his refusal of the room

be received by the Secretary in writing before September 8th. It will be returned in full at the end of the College year if the room key be given back and the room and furniture left in a satisfactory condition. The following principles govern the allotment of rooms: (i) No student who, as a result of the annual spring examinations is not assured of being able to proceed to the subsequent year, will be admitted into the Residence. (ii) The rooms in each House will be distributed proportionately between the various Faculties and Years. (iii) Rooms will be reserved for members of the incoming First Year until September 18th. (iv) Applications will be considered in order of priority.

The University lays down three general rules, designed to prevent hazing, the use of intoxicants and gambling. The students in each House shall elect a House Committee, which is entrusted by the University with the making and enforcing of any other needed rules and with the maintenance of order. A member of the Faculty resides in each House to act as friend and adviser to the men in residence.
